**NOTES**

- i. All trains in this timetable are formed of Electric Multiple Unit/s (EMU) unless otherwise indicated.
- ii. Where no separate time is shown for arrival and departure, the time indicated is the departure time. Small type indicates passing time
- iii. Trains must leave at the advertised time whenever practicable. Where the advertised departure times of passenger trains are slightly earlier than those shown in the Working Timetable, the former must be used in quotations to the public.
- iv. A half minute is allowed for station duties in the case of diesel-electric trains and 20 seconds in the case of electric trains unless separate arrival and departure times are provided, or more time is specified by letter indication.
- v. The four character indication shown at the top of timing columns is for train identification
  - The first character (numeral) denotes the train classification;
  - The second character (letter) denotes the destination, groups of services or routes (as the case may be)
  - The last two characters (numerals) are progressive numbers, which provide individual train identification.

**TIMING LOADS IN WORKING TIMETABLES**

- The timing load at the head of a diesel unit operated train indicates the type of the unit on which the timing of the train is based.
- The timing load for locomotive hauled trains indicates the type of traction D, E, or ED (diesel, electric or electro-diesel) followed by the tonnage on which the timing of the train is based.
- Where the tonnage is not a relevant factor, e.g. light movements, the letters D, E or ED appear in isolation.

**TRAIN BRAKING**

Locomotive hauled trains will normally be air-braked. In those cases where vacuum braking applies the symbol VB will appear at the head of the train column.

- ← - Continued from previous column/s

## FOUR CHARACTER TRAIN NUMBERING SYSTEM

### 1. GENERAL

- 1.1.** Inserted at the head of each timing column in the Working Timetable and Special Notices is a train number composed of four characters.
- 1.2.** These train numbers are meant, primarily, for use with train describer equipment, which is provided in certain signal boxes.
- 1.3.** All four characters must be used to identify a train.

### 2. FIRST CHARACTER

**2.1** The first character is a number indicating the classification of the train in accordance with the Rule Book Appendix instructions

### 3. SECOND CHARACTER

**3.1** The second character is a letter indicating the destination or routing of services

**3.2** The tables below illustrate the First and Second Character routing principles for train services in the Sussex area. Unless otherwise stated the codes shown apply in both directions, and to services which start/terminate at intermediate points:
