Rule Book Module G1 - General safety responsibilities

Section 1, Clause 1.1 - Rules, regulations and instructions

Mainline Turnback Boards

Trackside retroreflective Mainline Turnback Boards are installed at locations to act as a further Driver Aid so that the Driver can be assured that the rear of their train (dependant of unit length) is clear of the controlling Track Circuit to facilitate a Turnback Manoeuvre from the track circuitry associated with that Signal. These signs are primarily for Class 700 trains and are formed of white squares with black lettering and border, photographs illustrate the two types: -

It is to be noted that there are usually 2 Turnback Boards for every Signal. One that is denoted TB 210m and the other which is denoted TB 275m. The board stating TB 210m has been positioned to ensure a Class 700 RLU (Reduced Length Unit) which is formed of 8 carriages of approx. 20m and allowing for a Signal Standback of 15 m. When the driver of a Class 700 RLU is parallel to that sign they are clear of the controlling circuit at the rear of their unit. Similarly, with a 12 Car unit\FLU (Full Length Unit) once parallel with TB 275m sign the unit will be in a position to safely undertake a Turnback Procedure\Manoeuvre. These signs have been designed to also act as reference points for Driver's of alternative rolling stock to show meterage from the controlling circuit.

It is to be noted that these signs are purely a Driver Aid and contact with the Signaller to clarify the safe positioning of the train to undertake any Turnback Procedure is still required.

London North Eastern Route GI - Dated: 11/04/20

Rule Book Module G1 - General safety responsibilities

Section 5 - Communications procedure

Using GSM-R berth triggered messages and non-verbal acknowledgements to caution Drivers

It is now authorised to use to caution Drivers via operational safety messages for 5 scenarios using a GSM-R berth-triggered broadcast, with the Driver confirming receipt and acknowledging a clear understanding of the broadcast by using the GSM-R 'ST' acknowledgement button. All GSM-R Fitted Units in the area will receive these Broadcasts. The berth triggered safety broadcasts process can be used for live events for the five scenarios listed:

Reportable railhead conditions.

Animals on the line.

Defective Emergency Indicators.

Wheel Impact Load Detector Activations.

Unusual events (Not Track or Signalling).

Drivers of services not fitted with version 3.5 software may disregard the GSM-R berth triggered safety broadcast for,

Reportable railhead conditions.

Animals on the line.

Defective Emergency Indicators.

Wheel Impact Load Detector Activations.

Unusual events (Not Track or Signalling).

The berth trigger broadcasts will be in the following areas

York ROC Kings Cross WS

York ROC Finsbury Park WS

York ROC Wood Green WS

York ROC Langley WS

York ROC Hitchin WS

York ROC Huntingdon WS

York ROC Peterborough WS

Doncaster PSB

Tyneside IECC

ECM-5 Danby Wiske – Newcastle Station

ECM5/6/7 Newcastle Station – Plessey

NEC1 Newcastle – Skiff

LEN3 Newcastle – Ryhope

DNS1 Darlington – Teeside Airport

DAE1 Darlington – Heighington

BGE Boldon West Jn – Tyne Dock

BNW Boldon East Jn – Tyne Dock

Morpeth SB

ECM7 Plessey – Alnmouth

Alnmouth SB

ECM7 Alnmouth – Tweedmouth

ECM7/8 Tweedmouth – Marshall Meadows

York South Workstation

York North Workstation

London North Eastern Route Sectional Appendix Module LN1

Leeds East Workstation

Leeds East Assist Workstation

Leeds West Workstation

Leeds North West Workstation

Leeds Ardsley Workstation

Methodology

Signaller records the berth triggered safety broadcast to a set script and stores it on the system.

Signaller sets up the berth triggered safety broadcast at the appropriate signal berth.

Signaller will maintain the protecting signal at danger. This is the signal where the Signaller would stop and caution the train if the Signaller does not receive the acknowledgement.

The safety broadcast will be made automatically to each train occupying the designated berth(s).

The Driver acknowledges that the safety broadcast has been received and that it has been understood by pressing the ST Button.

The protecting signal is maintained at danger until the signaller has received an acknowledgement from the approaching train. The acknowledgement will be an 'Acknowledgement' (ACK) message from the Driver.

The protecting signal may be cleared when the Signaller receives the acknowledgement message.

If the acknowledgement message is not received by the Signaller the protecting signal remains at danger and the Driver obeys all signals as normal. The driver should contact the relevant signaller at the earliest opportunity, if brought to a stand, as per the rule book requirements"

When the caution message is received and acknowledged by the Driver they will continue to obey all signals and apply the appropriate rule over the section of line.

Broadcast Message Content

Poor Railhead

'This is a safety broadcast from the signaller at _____. There are low/exceptionally poor* railhead conditions at/on* the approach to _____. Only acknowledge if you have fully understood this message. To acknowledge, press the ST Button. End of safety broadcast

****Delete as appropriate***

Animals on or near the line

'This is a safety broadcast from the signaller at _____. There are animals on or near the line at/between* _____ and* _____. Only acknowledge if you have fully understood this message. To acknowledge, press the ST Button. End of safety broadcast

****Delete as appropriate***

Defective Emergency Indicators

'This is a safety broadcast from the signaller at _____. There is a defective emergency indicator for a __mph emergency speed restriction at _____. Only acknowledge if you have fully understood this message. To acknowledge, press the ST Button. End of safety broadcast

****Delete as appropriate***

Wheel Impact Load Detection

'This is a safety broadcast from the signaller at _____. There has been a wheel impact load detection alert for your train, continue at __mph and obey all signals. Only acknowledge if you have fully understood this message. To acknowledge, press the ST Button. End of safety broadcast

****Delete as appropriate***

Unusual events

'This is a safety broadcast from the signaller at _____. * _____. Only acknowledge if you have fully understood this message. To acknowledge, press the ST Button. End of safety broadcast

****Insert details of the incident, location and any speed restriction in the main body of the broadcast***

Note:

Unusual events and structure faults can include overcrowding on station platforms or loose canopy on stations platforms. These locations must be easily identifiable by both the signaller and the driver.

Trial using GSM-R to advise drivers of speed restrictions relating to Track Defects between 28 June 2019 and 28 December 2019

A trial is taking place to test additional scenarios for GSM-R Safety Broadcasts to pass safety critical information to Drivers with the Driver confirming receipt and acknowledging understanding by using the 'acknowledgement' button.

The trial involves TOC/FOC services only and will be for Track Defects. The trial will be in the following areas:

Lincoln West, Lincoln East, Lincoln City, Lincoln South and Allington Junction

Methodology

1. Signaller identifies the requirement to caution
2. Signaller decides whether cautioning using GSM-R is possible and the signals where the berth broadcast is to be triggered (these may be predefined for some trial scenarios covering static locations e.g. Bridges)
3. Signaller records the caution message to a set script and stores it on the system (unless pre-recorded message exists)
4. The message content shall contain full words and no abbreviations.
5. The message shall be recorded to the set scripts using the 'Safety' identifier.
6. The message shall make it clear that the message is complete.
7. The berth triggered broadcast will be active for a period of four hours and will need to be reset or a new message recorded to supersede it.
8. Only one berth broadcast can be recorded per signaller but the message can be triggered at separate signal berths on several lines.
9. Signaller sets up the berth triggered broadcast at the correct signal berth(s).
10. Signaller will maintain the protecting signal at danger with a reminder appliance applied. This is the signal where the Signaller would stop and caution the train under current conditions.
11. *Broadcast made automatically to each train occupying the designated berth(s) and is received by the Driver*
12. The Signaller shall monitor GSM-R to determine whether the message has failed and the failure code is displayed on the fixed terminal.
13. A failed message will have a 'can not be sent' message or 'failure' message on the fixed terminal.
14. The message is broadcast automatically over the loud speaker in the Drivers cab
15. When the Driver is involved in another call the broadcast will be seen as a call waiting on the cab radio display. If the Driver terminates the call within 20 seconds the message will be broadcast over the loudspeaker.
16. The Driver acknowledges that the message has been received and that it has been understood by pressing the ST button on the radio head.
17. The protecting signal is maintained at danger until the signaller has received an acknowledgement from the approaching train at a signal in rear of the signal being held at danger. The acknowledgement will be a 'acknowledge' message from the Driver.
18. The reminder appliance will be removed and the protecting signal cleared when the Signaller receives the acknowledgement before the signal being held at danger (see special instructions).
19. If the ST acknowledgement is not received or is received after the set location the signal remains at danger and the Driver obeys all signals as normal.
20. *When the train has passed the protecting signal, the protecting signal is replaced to danger and the reminder appliance applied.*
21. When the caution message is received and acknowledged by the Driver they continue without stopping and obey the speed restriction and all signals.

Message Content

Track Defects

"This is a safety broadcast from the Signaller at _____. Due to a track defect, a safety speed of ___ mph has been imposed between (Name/Location) _____ and _____ (Name/Location). If understood, press the ST button."

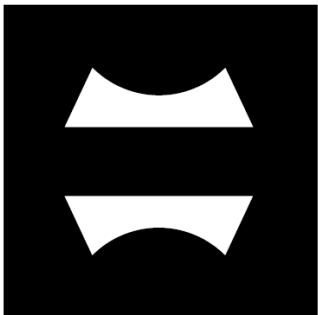

Note: During the trial period all other caution on the move messages will end with the text "If understood, press the ST button."

London North Eastern Route GI - Dated: 28/08/2023

AUTOMATIC POWER CHANGEOVER SITES (APCo)

As part of the introduction of the Intercity Express Train (IET) Balises and lineside signage has been installed at strategic locations across LNE, Anglia, LNW & Scotland. The track mounted Balises communicate with the train which will automatically change traction mode between electric and diesel, either dynamically (shortly after passing the Balise), or statically when the train next comes to a stand (normally a station stop). Signage is not normally installed for APCo pantograph raise sites, however, signage is usually provided as a supplementary prompt to the driver to ensure the train has transitioned from electric to diesel with the pantographs safely lowered. APCo sites and associated signage may be for all trains or only selective trains or certain routes for which the trains should respond using the information held in the headcode for the service relative to the location. The sectional Appendix Table A and the Isolation Diagrams & Instructions for the route cover the locations.

The following sign has been provided at the APCo zone. This sign is applicable to Bi-mode Class 800 and 802.

Power Changeover Reminder Signage – Electric to Diesel Mode (E>D)	
Sign	Action
	<p>Lower Pantograph Changeover Sign</p> <p>This sign means lower pantograph it is used to advise drivers to lower the pantograph in association with an APCO site.</p> <p>At this sign if the APCO has not worked the driver will commence manual traction change over procedures.</p> <p>This sign is also used for other purposes as outlined in the Rule Book Modules.</p> <p>This sign may be accompanied by additional information, this could be a directional arrow, location name, or class specific</p>

Trains that fail to transition at an APCO Pantograph raise site (**D>E**) must only attempt a manual transition to electric mode as outlined in the Rule Book Modules for raising Pantographs. Other reminders or prompts for traction type changeover may also be in place.

London North Eastern GI - Dated: 07/09/2020

Rule Book Module M3 – Managing incidents, floods and snow

Independent snow ploughs

Standard Independent Ploughs

The instructions relating to the movement and use of Standard Independent Snow Ploughs contained in the Rule Book Module M3, Section 6, will apply to ploughs of this type in number range ADB965189 - ADB965243. These instructions will also apply to other independent snow ploughs fitted with an operative automatic brake with the exception that the reference to side flaps is not relevant.

When ploughs are moved from one area to another they should be marshalled either side of the locomotive using screw coupling where possible, or in the case of a single plough this should be hauled. For parking the ploughs in sidings or positioning for maintenance the emergency drawbar may be used.

Miniature Snowploughs:-

Complete sets of 3 part miniature snowploughs (2 centre sections, 2 left hand blades and 2 right hand blades comprising one set) will be fitted to locomotives. When required, the location of these locomotives can be obtained from DB Cargo Control.

The Depot Engineer will be responsible for ensuring that the centre portion of the ploughs are removed by 1 April and any repairs effected before the ploughs are required for the next winter period.

The Standard Miniature Snowplough is designed not to protrude beyond a fully compressed locomotive buffer but care must be exercised when coupling such a locomotive to a train and especially when coupling two so fitted locomotives to each other in order that personal injury is avoided.

When locomotives fitted with snowploughs are taken into sidings or depots, Drivers must prevent damage to the plough blades by stopping short of any buffer stops, scotches or wheel stops.

London North Eastern Route GI - Dated: 27/12/18

Rule Book Module P1 - Single line working

If single line working terminates at a junction with a Track Circuit Block single line and it is necessary for a train which has arrived in the wrong direction to pass at Danger the signal controlling entrance to the TCB single line, the Signaller must observe the provision of Module TS11, Regulation 9.3 – Unable to clear a stop signal but all track circuits are showing clear.

The Driver will be informed that all track circuits are functioning correctly and instructed to proceed cautiously to the next stop signal.

London North Eastern Route GI - Dated: 07/12/13

Rule Book Module S5 - Passing a signal at danger : Part A

Passing a signal at danger on the signaller's authority

Level crossings with crossing keeper operated non block signals

Authority to pass over the level crossing during signal failure/disconnection or Single Line Working.

At the level crossings listed at the end of this instruction, the protecting signals are not part of the block signalling and are only provided to protect the level crossing. The Driver will receive a green hand signal from the Crossing Keeper as authority to pass over the crossing:-

When due to failure or disconnection it is necessary to pass the protecting signal at Danger. The Driver must, after passing over the crossing, regulate the speed of his train, having regard to the aspect displayed at the section signal.

During Single Line Working when (in accordance with Rule Book Module P1, Section 6.2 b) (other manned level crossing) a train in the wrong direction is authorised to pass over a level crossing, where the normal position of the gates or barriers is open for road traffic.

* = Crossings normally open for road traffic

Rule Book Module SP-Speeds:Emergency speed restriction

Section 4 – Emergency Speed Restrictions (ESR) - How emergency speed restrictions are set up

If an emergency speed restriction (ESR) is imposed and before the speed restriction equipment has been set up, the signaller will tell the driver of a train to pass over the ESR the actual speed limit that has been imposed by the engineer.

It will no longer be necessary for the drivers of all trains to proceed at no more than 20 mph prior to the erection of the speed restriction equipment but drivers must travel over the restriction at no more than the speed given by the signaller.

This also means that only trains which would normally be running at a speed higher than the ESR to be imposed will need to be cautioned by the signaller. For example, if an ESR of 60 mph is imposed, it will not be necessary to stop and advise the drivers of trains classes 6, 7 or 8.

Rule Book Module TS1 - General signalling regulations

Section 13

Handbook 8 - IWA, COSS or PC blocking a line

Handbook 21 – Safe Work Leader (SWL) blocking a line

Swing Bridges at Goole, Hull, Keadby and Selby

When arranging a blockage of a line which passes over the swing bridge, then the COSS/IWA/SWL/PC must come to a clear understanding with the signaller/bridge operator that either:

a) The swing bridge will remain closed to river traffic for the duration of the blockage.

OR

b) The signaller will obtain the authority of the COSS/IWA/SWL/PC before opening the bridge to river traffic.

OR

c) The work site is clear of the bridge and will not affect the operation of the bridge.

Providing additional protection by use of a track circuit operating device (T-COD)

Remotely activated T-Cod (e.g. ZKL): These devices are static devices permanently fitted to the rail. These devices are operated remotely and occupy a track circuit to provide additional protection in exactly the same way as a T-Cod, which is described in Rule Book Module TS1 Clause 13.2.4. These devices are authorised providing a Signalbox Special Instruction (SBSI) is in place.

TCOD's may be used to provide additional protection on the following sections of line listed below subject to the restrictions shown:-

Must not be used on track circuits between the signals protecting a RC or CCTV level crossing and the track circuit that passes through the crossing deck. On bi-directional and single lines, TCOD's must not be used between the signals protecting the crossing.

- Must not be used where there are check rails.
- Must not be used within Axle Counter Areas
- TCOD's are best used clear of points and crossings and not in overlap track circuits. If it is necessary for a TCOD to be used in the vicinity of points, the Signaller must before giving permission consider the implications of track circuit controls etc. on other lines, particularly if the points will need to be moved during the time the TCOD is in use.

Routes and locations on which TCOD can be used	Remarks, including Locations/Sections where TCOD cannot be used, in addition to those detailed above and in the RULE BOOK
LN101 KINGS CROSS TO SHAFTHOLME JN	
Kings Cross to Shaftholme Jn.	Not to be used between Kings Cross station and Holloway Junction on Welwyn Garden City to Arlesey all lines on Axle Counter sections
Peterborough to New England Jn	Not to be used on Eastfield South Up Departure, Eastfield South Down Arrival, Eastfield North Up Arrival and Eastfield North Down Departure lines between Peterborough & New England North
New England to Helpston Jn	Not to be used between Down Slow / Down Stamford line and Up Stamford line in the Axle counter area
Newark Flat Crossing	Not to be used at Newark Flat crossing between the Axle Counters

London North Eastern Route GI - Dated: 03/08/2024

Rule Book Module T3 - Possession of the line for engineering work

Swing Bridges at Goole, Hull, Keadby and Selby

Note: Whenever possible, possessions should always be planned so that the swing bridge is outside the possession limits.

When a T3 possession is to be arranged which will include the signal section(s) that passes over the swing bridge then one of the following methods of protection must be adopted:

- When no work is required to take place between the protecting signal(s) and exit point of the bridge and no trains or on-track plant are within the possession, then the Signaller must obtain the PICOP's authority to open the bridge to river as required. Where possible, before granting the possession to the PICOP the Signaller will advise the PICOP that river traffic that may be required to pass the bridge during the possession.
- If trains or on-track plant are to operate within the possession, but do not require to work between the bridge protecting signal(s) and exit point, a separate worksite must be created to protect the bridge. The PICOP must arrange for the marker boards to be positioned at the bridge protecting signal(s) and 100 metres (100 yards) beyond the exit point (where applicable this distance must be extended to include the limits of any track circuits that will lock the bridge controls when occupied). When these arrangements have been put in place, the PICOP must advise the Signaller that the bridge may be operated as normal. In these circumstances, the PICOP must act as an Engineering Supervisor for the bridge work site.

If a train or on track plant is required to pass through the bridge worksite, the PICOP must receive an assurance from the Signaller that the bridge is closed and secure for rail traffic before arranging for the movement to have passed clear of the worksite exit marker board, the PICOP must advise the Signaller that the bridge may be operated normally.

London North Eastern Route GI - Dated: 02/12/06

Rule Book Module T10 – Duties of a designated person (DP) and people working on rail vehicles

Safety of employees working on rail vehicles

At the following locations sidings are used for maintenance and repairs or form part of depots as shown in Rule Book, Module T10, Section 1. When sidings are in use by Maintenance personnel the movements of rail vehicles will be under the control of the Designated Person, Responsible for Protection (DP) who will be identified by an orange arm-band endorsed 'DP' in black letters. At other times movements will be under the control of operating staff. Movements must not exceed 5 mph.

When Maintenance personnel are in the sidings visitors and staff of other departments/ Companies must report to the designated person and must not start work until their presence in the depot or sidings has been recorded and the relevant protection has been provided.

Location	Line(s)
Bedford Carriage Sidings	All roads
Corby Internal Exchange BSC	Cripple Siding
Derby Etches Park Depot	Depot Roads 4 to 8
Derby Etches Park 4 Shed Fuelling Point	Both Shed Roads
Derby Railway Technical Centre	Engineering Development Unit roads 1 to 6. Research Workshops Roads 7, 8, 12, 13,14, 17. Track Laboratory Road 19
Leicester Humberstone Road	Cripple Sidings 12 and 13
Toton C & W Depot	Depot Roads 1 to 4 Sidings 5 and 6
Toton EWS TMD	Depot Roads 1 to 4 Depot Roads 5 to 15 (North) Wheel Lathe Road

London North Eastern Route GI - Dated: 27/12/18

Rule Book Module TS1 - General signalling regulations

Power Operated Points - Wrong Direction Movements

For the purposes of the Rule Book Module TS1, Section 9.2 "Movement of vehicles conveying passengers over points not fitted with locking apparatus", and Module P1, Section 2.6 (c) "points that do not need to be worked", all power operated points in running lines which are normally trailing, except those listed below, may be regarded as being equipped with facing point locks.

<u>Signal Box</u>	<u>Point Nos.</u>
Prince of Wales	2098

London North Eastern Route GI - Dated: 14/12/2019

Rule Book Module TW1, Section 7, Dead locomotives, and Section 16, Locomotives at both ends of the train or in tandem

DB Cargo have been authorised dead haul a Class 66 locomotive in an intermediate position in trains formed of HTA vehicles, between York Yards North or South and Carlisle Kingmoor via Tyne Yard in the Down direction only.

The maximum length of the trains is 42 HTA vehicles and 2 Class 66 locomotives (including the hauling locomotive).

Where the permissible speed on the route is 75 mph or less, the trains will travel at 5 mph below the permissible speed.

London North Eastern Route GI - Dated: 27/12/18

Rule Book Module TW1 - Preparation and movement of trains : General

Section 7 - Hauling dead traction units

When more than two locomotives (including hauling and dead locomotives) are to be coupled together, it will not be necessary to obtain the authority of the Track Engineer, provided any conditions in the Route Availability for Diesel and Electric Locomotives are complied with.

London North Eastern Route GI - Dated: 02/12/06

Rule Book Module TW1 - Preparation and movement of trains : General

Section 28 - Rail Adhesion

Poor Adhesion display sign sites (PADS Sites)

An Advance Warning sign consisting of an orange L.E.D. flashing indicator alternatively reading 'POOR (then) ADHESION' is provided at all of the following locations.

Retro-reflective black and white signs (900mm by 900mm) as below will also be provided at these sites.

[pid=6048; href=activetext_img_6048.gif](#)

When the Advance Warning Sign is illuminated poor adhesion conditions will exist at that site and Drivers will not be stopped specially and advised.

Dock Junction Link Line

The Dock Junction Link Line is normally blocked by CTRL using the CTRL rules. However when it is blocked by Network Rail the Modular Rule Book T3 is authorised as supplemented by Network Rail local procedures.

London North Eastern Route GI - Dated: 27/12/2023

Rule Book Module TW1 - Preparation and movement of trains : Brake systems

Section 4.4 – Coaching stock vehicles with isolated brakes

On the sections of line listed below a train formed of a 2 car Multiple Unit must not be worked with the brake isolated on one vehicle or a 3 car Multiple Unit worked with the brake isolated on 2 vehicles. An assisting train must be attached so that the proportion of vehicles isolated does not exceed 1 in 4 if 2x2 car units are involved or 2 in 5 if a 3 car and 2 car unit are involved. A single Class 153 with brakes isolated must be assisted by at least 2 Class 153 or a 2 car unit.

The same proportion of vehicles must be applied to longer train formations, e.g. 3x2 car not more than 2 vehicles to be isolated.

Alternatively a locomotive can be provided to assist the train at the front.

If the first vehicle (or a Class 153) has the brake isolated the train must be assisted from the front.

Rule Book Handbook HB8 - IWA, COSS or PC blocking a line, HB21 Safe Work Leader Blocking a Line & Rule Book Module TS1 – General Signalling Regulations

Line Blockage Change of COSS or SWL

If you are a new COSS taking duty you must tell the Signaller

If you are the new COSS when a signal box that has been closed is reopened, you must tell the signaller that the COSS has changed.

Where a PC is appointed, the PC must carryout the role of the COSS as described above when applicable.

London North Eastern Route GI - Dated: 24/04/2021

Rule Book Module RS521 - Signals, handsignals, indicators and signs

Section 7, Clause 7.5 - Permissible Speed Indicators with letters

This is what the letters mean:

Letters	Description
HST	Class 91 locomotive with mark 4 vehicles and DVT, classes 158, 159, 168, 170, 171, 172, 175, 180, 220, 221, 222, 253, 254 and 373 Class 80X, 700, 717, 365, 387
MU	Multiple Unit Trains
DMU	Diesel Multiple Units
EMU	Electrical Multiple Units
SP	Classes 150, 153, 155, 156, 158, 159, 165, 166, 168, 170, 171 and 172
CS	Class 67 locomotive

At locations where more than one speed indicator is displayed, classes listed in more than one speed category shown above, may run at the higher of the speeds displayed.

London North Eastern Route Sectional Appendix Module LN1

National exceptions to MU trains

- Class 185 trains are not permitted to run at MU or DMU speeds
- Class 390 trains are not permitted to run at MU or EMU speeds
- Class 253 and 254 trains formed with less than three coaches between the power cars are not permitted to run at MU or DMU speeds

National GI - Dated: 22/06/20

ANIMALS ON THE LINE

NOTICE TO TRAINCREW, SIGNALLERS AND CONTROLLERS

Where the rules and regulations (General Signalling Regulation 18.2 and Rule Book Module TW1 section 20) require that trains be cautioned because of animals on the line, this procedure need not be applied providing that the animals are:

- domestic, for example, dogs
- deer
- not more than six sheep

However, drivers are still required to make an initial report of the animals being 'on the line' and maintenance response teams are mobilised to establish where the animals gained access to the line and where necessary effect repairs.

Once a report is received from a driver, then a general call will be put out via GSM-R / CSR to all trains in the area, advising them of the approximate vicinity of the incursion and that they are not required to stop to report the incident.

Drivers are advised that if they believe the safety of trains is at risk then they are instructed to carry out the relevant provisions of the Rule Book.

SWANS ON THE LINE

A train need only be cautioned for a swan on the line if the swan is reported to be within the "four foot" of the line concerned

London North Eastern Route GI - Dated: 07/05/16

AXLE COUNTERS

The following Lines of Route are equipped with axle counters

The following activities require axle counter heads to be disconnected or removed and must be undertaken with appropriate Rule Book, Modules TS1 Regulation 13.2, T3 protection and Handbook 8, and Handbook 21:

- Re-railing, resleepering or reballasting
- Removal of rails with axle counter heads
- Tamper operations past axle counter heads, other than:
 - those using a split-head tamping machine suitable for tamping single sleepers around axle counters
 - journeys of the tamper to or from the work site
- Stoneblower or ballast cleaner/regulator operations past axle counter heads, but not including journeys to or from the work site
- Any other work, which may affect axle counter heads.

In the Lincoln Signalling Control Centre area, Harrogate Signal Box control area and East Midlands Control Centre area, Engineering Possession Reminders must be applied for all possessions. A Signalling Technician must be provided for the reset in accordance with EPR procedures.

* Where Sections of Line Equipped are marked with an asterisk, a Signalling Technician must be provided to re-set the equipment.

Permanent Way and S & T Equipment utilising wheels for movement along tracks, such as trolleys and engineering skates, must not be used without the permission of the COSS/PC/SWL/PICOP.

When giving up a possession, the PICOP must confirm that any affected axle counter sections are fit for use.

The following activities may be undertaken with lines open to traffic where a safe method of working has been established in advance that does not require Rule Book, Modules TS1 Regulation 13.2, T3 protection Handbook 8 and Handbook 21:

- Rail grinding past axle counter heads
- Any work near axle counter heads with tools or any equipment which cannot impact on the operation of the axle counter heads
- Loading and unloading of materials

In the Lincoln Signalling Control Centre area, Harrogate Signal Box control area and the East Midlands Control Area Special Train Reminders must be applied by the Signaller. The Signaller may reset the axle counters, if necessary, in accordance with STR procedures.

Rule Book Module TW5 Preparation and movement of trains - Defective or isolated vehicles and on-train equipment - Section 25.4 - Moving vehicles with wheelskates

Traction units or vehicles fitted with wheelskates must not pass over the above routes unless the movement has been planned and the signaller advised.

The following activities require axle counter heads to be disconnected or removed and must be undertaken with appropriate Rule Book, Modules TS1 Regulation 13.2, T3 protection and Handbook 8; and Handbook 21:

- Re-railing, resleepering or reballasting
- Removal of rails with axle counter heads
- Tamper operations past axle counter heads, other than:
those using a split-head tamping machine suitable for tamping single sleepers around axle counters
- journeys of the tamper to or from the work site
- Stoneblower or ballast cleaner/regulator operations past axle counter heads, but not including journeys to or from the work site
- Any other work, which may affect axle counter heads.

In the Lincoln Signalling Control Centre area, Harrogate Signal Box control area and East Midlands Control Centre area, Engineering Possession Reminders must be applied for all possessions. A Signalling Technician must be provided for the reset in accordance with EPR procedures.

* Where Sections of Line Equipped are marked with an asterisk, a Signalling Technician must be provided to re-set the equipment.

London North Eastern Route Sectional Appendix Module LN1

Permanent Way and S & T Equipment utilising wheels for movement along tracks, such as trolleys and engineering skates, must not be used without the permission of the COSS/PC/SWL/PICOP.

When giving up a possession, the PICOP must confirm that any affected axle counter sections are fit for use.

The following activities may be undertaken with lines open to traffic where a safe method of working has been established in advance that does not require Rule Book, Modules TS1 Regulation 13.2, T3 protection and Handbook 8 and Handbook 21:

- Rail grinding past axle counter heads
- Any work near axle counter heads with tools or any equipment which cannot impact on the operation of the axle counter heads
- Loading and unloading of materials

In the Lincoln Signalling Control Centre area, Harrogate Signal Box control area and the East Midlands Control Area Special Train Reminders must be applied by the Signaller. The Signaller may reset the axle counters, if necessary, in accordance with STR procedures.

Rule Book Module TW5 Preparation and movement of trains - Defective or isolated vehicles and on-train equipment, Section 25.4 - Moving vehicles with wheelskates

Traction units or vehicles fitted with wheelskates must not pass over the above routes unless the movement has been planned and the signaller advised.

London North Eastern Route GI - Dated: 09/09/2024

CAR F1 RESTRICTION

Car Shape F1 is prohibited to run on sections that have electrified lines. This is an existing out of gauge compatibility restriction on the existing electrified network South of Kettering North Junction. This restriction is now extended to Wigston South Junction (SPC3 95m 37ch).

East Midlands Route GI – Dated: 28/07/2024

CLASS 87 LOCOMOTIVES

From 00:01 HOURS ON SUNDAY 28TH JULY 2024, Class 87 locomotives are prohibited from being hauled (pantograph down) or under their own power between Kettering North Junction and Wigston South Junction (ELR SPC3) due to electrical clearance constraints.

East Midlands Route GI – Dated: 28/07/2024

CLASS 950 (formerly Class 150) TRACK RECORDING UNIT (TRU) ROUTES AND RESTRICTIONS

The Class 950 TRU (formerly Class 150) may be worked over all lines detailed in Table A of the London North Eastern Sectional Appendix subject to the following restrictions:

Route	Restriction
Moorgate – Drayton Park	Prohibited (diesel prohibition)
Northallerton Longlands Jn – Newcastle East Jn via the coast	Speed restriction of 40mph between Monkwearmouth and East Boldon; 91m 32ch - 93m 17ch

London North Eastern Route GI - Dated: 06/04/13

CLASS 373/2 TRAINS: ROUTES AND RESTRICTIONS

The Class 373/2 may be worked over the lines listed below subject to the restrictions listed in 2.

1. Routes

North London Incline Line

- a) Camden Road Central Jn - Copenhagen Jn

East Coast Main Line

- d) All Main and Fast lines between Kings Cross and York
- e) All Slow and Goods lines and Passenger Loops between Kings Cross and York
- f) Ferme Park Carriage Sidings - Nos. 1, 2 and 3 lines
- g) Ferme Park North Jn to Wood Green South Jn - Down Carriage line
- h) Peterborough to New England North, Easfield South Down Arrival, Eastfield North Down Departure, Eastfield North Up Arrival, Eastfield South Up departure
- i) Between Loversall Carr Jn and Decoy North Jn via Down and Up Lincoln Flyover.
- j) Holgate Loop and Down Sidings
- k) Marshgate Jn to Down Thorne Limit of Shunt via Down Thorne (electrified sections only) except:
 - (i) Up Decoy Goods lines 1, 2 and 3 and Transfer line
 - (ii) No.1 Slow line Kings Cross – Belle Isle

Hertford Loop

- c) Wood Green South Jn to Langley Jn

2. Restrictions

2.1 Speed Restrictions

Speed shall be restricted to the lower of 125 mph or the permissible line speed except:

- a) between the locations shown in figures i, ii, iii the maximum speed must not exceed 110mph:
 - (i) Down Fast line between 59m 10ch and 59m 30ch (Huntingdon North Jn)
 - (ii) between Grantham (105m 77ch) and Shaftholme Jn (160m 00ch Down/160m 20ch Up)
 - (iii) between Colton Jn (182m 75ch) and York
- b) Maximum speed of 60 mph if any trailer vehicle suspension deflated
- c) Hitchin Underbridge No.102 (32m 03ch) 20 mph Up Slow
- d) Hitchin Underbridge No.102 (32m 03ch) 50 mph Down Slow

Note: these speed restrictions are not signed at the lineside, except restriction (a) i,

London North Eastern Route Sectional Appendix Module LN1

|-----|---|--|
| (a) | Kings Cross Station | Platforms 1 & 6 only permitted. |
| (b) | Doncaster Station | Platforms 1, 3, 4 & 8 only permitted. |
| (c) | York Station | Platforms 3, 5, 9, 10 & 11 only permitted.
(All movements are prohibited beyond the platform starting signals at the North end of York Station as defined above). |
| (e) | Up and Down Flyover lines at Doncaster | No train to pass Class 373/2 between 116m 46ch and 117m 46ch. |
| (f) | Eastfield Up and Down South Arrival and Departure lines at Peterborough | When a Class 373/2 is travelling on Departure or South Down Arrival line no train to pass Class 373/2 on South Down Arrival or South Up Departure line. |
| (g) | The total number of Class 373/2 trains operating under their own power between Mitre Bridge, Kings Cross and York is limited to four. | |
| (h) | The use of the Doncaster Station ladder (points 2429, 2428, 2422 in the reversed position) is prohibited. | |
| (i) | Down Thorne line When a Class 373/2 is travelling on the Down Thorne line no train to pass Class 373/2 on opposite line. | |

London North Eastern Route GI - Dated: 25/03/24

This page is intentionally blank

- (i) Down Thorne line When a Class 373/2 is travelling on the Down Thorne line no train to pass Class 373/2 on opposite line.

London North Eastern Route GI - Dated: 01/04/17

COUNTDOWN MARKERS

At certain signals which have a history of being passed at Danger without authority, Countdown Markers are provided to draw attention to their location.

The Countdown Markers, which consist of an outer reflectorised white board with three diagonal red stripes positioned 300 metres (328 yards) from the signal, an intermediate reflectorised white board with two diagonal red stripes positioned 200 metres (219 yards) from the signal, and an inner reflectorised white board with one diagonal red stripe positioned 100 metres (109 yards) from the signal.

London North Eastern Route GI - Dated: 02/12/06

ELECTRIC TRACTION: PANTOGRAPHS

Double headed electric hauled freight trains must not normally operate over the East Coast Main line with more than one pantograph raised. When necessary, due to West Coast Main line diversion, they can operate subject to the following conditions:-

- A maximum speed of 70mph (60mph when an 80mph maximum speed restriction is put in place for other types of electric traction during high winds).
- They are prohibited from operating south of Peterborough during the periods 06.15 to 09.00 and 16.00 to 18.59 Mondays to Fridays.
- There must be a minimum separation period of one hour with the other diverted electric hauled freight trains.
- Where practicable, the maximum current drawn by the locomotives should be limited to 300 amps.

London North Eastern Route GI - Dated: 02/12/06

ENGINEER'S GAUGING TRAIN - PROPELLING

An Engineer's gauging train consisting of a locomotive, gauging van and saloon may be regarded as an Officer's Special Train for the purposes of propelling, as provided for in the Rule Book Module TW1, provided the automatic brake is operative and the Guard has access to the automatic brake in the leading compartment in which he must ride.

London North Eastern Route GI - Dated: 07/12/13

ELECTRICAL SAFETY ITEM

The following instruction applies to all traincrew and maintenance staff and is applicable until further notice.

When the overhead line power supply has been isolated to permit maintenance work to take place at roof level on A.C. Electric Locomotives any shore based ETS Supply or ETS Supply from another coupled locomotive **MUST** be disconnected.

London North Eastern Route GI - Dated: 04/04/15

GSM-R - CAB RADIO REGISTRATION AT MAIN AND POSITION LIGHT SIGNALS - LOCATION CODES

DRIVERS ARE TO REGISTER USING THE LAST 3 DIGITS OF THE SIGNAL ID, ADDING LEADING ZEROS WHERE REQUIRED (E.G. FOR SIGNAL SN23, REGISTER USING 023) EXCEPT WHERE THE SIGNAL IS LISTED BELOW. IN SUCH CASES, THE CORRESPONDING LOCATION CODE IN THIS SECTION IS TO BE USED.

GSM-R – CAB RADIO REGISTRATION – AREA SPECIFIC 99X LOCATION CODES

When required to use a 99X location code (also known as 'wild card number') to pre-register or to register the cab radio as shown in the GSM-R user procedures the following area specific location code must be used in the areas covered by this Sectional Appendix:

997 East Midlands Route
998 LNE Route.

London North Eastern Route GI - Dated: 28/08/23

GSM-R GENERAL INSTRUCTION

TW5 SECTION 24 – KNOWN SEARCHING NETWORK LOCATIONS

The locations in the table below have encountered a temporary reduction in radio coverage with the GSM-R system which may result in registration problems and the ability of the driver to contact the signaller. This will be presented to the Driver on the DCP as 'searching for network'.

Drivers must carry out the 'Pending Registration' process on the radio and continue their journey.

Location	Fault Number	Comments	Outcome
Hendon	FMS DER93555	GSM-R issues at Hendon and then again at West Hampstead with it dropping out	Fixed – repeater installed

TW5 SECTION 24 – KNOWN MISROUTED CALL LOCATIONS

The locations in the table below are known areas where calls are frequently misrouted to the wrong signaller. Calls may misroute to the wrong signaller if the 'contact signaller' button is pressed.

Drivers are instructed to use the phone book to contact the signaller from these locations.

Location	Fault Number	Comments	Outcome
Wakefield Westgate	FMS YOR -540359	Misrouted calls	Fixed – data fill changed

TW5 SECTION 24 – KNOWN NON-TD REGISTRATION LOCATIONS

The locations in the table below are known areas where the lack of Train Describers results in registration problems. There will also be a likelihood of misrouted calls to the signaller if the 'contact signaller' button is pressed.

Drivers are instructed to register using the wildcard and not follow GSM-R bulletin 21 until the alias plates are added to the signals. The Driver is also instructed to use the phone book to contact the signaller from these locations.

Location	Fault Number	Comments	Outcome
Bradford Interchange	NA	No Alias plate in place	TBC

LIMITED COVERAGE ON FREIGHT ONLY BRANCH LINES

The freight-only branch lines listed in the table below are sections of permanent poor GSM-R coverage. These areas of poor coverage are in tunnels and deep cuttings resulting in GSM-R calls may be unreliable, as with previous NRN coverage. If a train is in a poor coverage area at the time the emergency call is initiated, the train radio will receive the emergency call as soon as there is sufficient GSM-R coverage.

SECTION	SA	ELR	Start Miles	Start Chains	End Miles	End Chains	GSM-R Predicted Poor Coverage Details
Pelaw Junction to Jarrow (NR Boundary)	LN670	JAW1	0	9	3	36	Poor coverage: JAW1 3m0ch - 3m36ch
Saltburn West to Boulby Mine (NR Boundary)	LN642	SSK1	27	5	34	29	Poor coverage: SSK1 29m25ch - 30m05ch
Embsay Junction (former) to Skipton Middle Junction	LN930	SKS1	220	64	221	68	Poor coverage through Haw Bank Tunnel: SKS1 220m77ch - 221m07ch

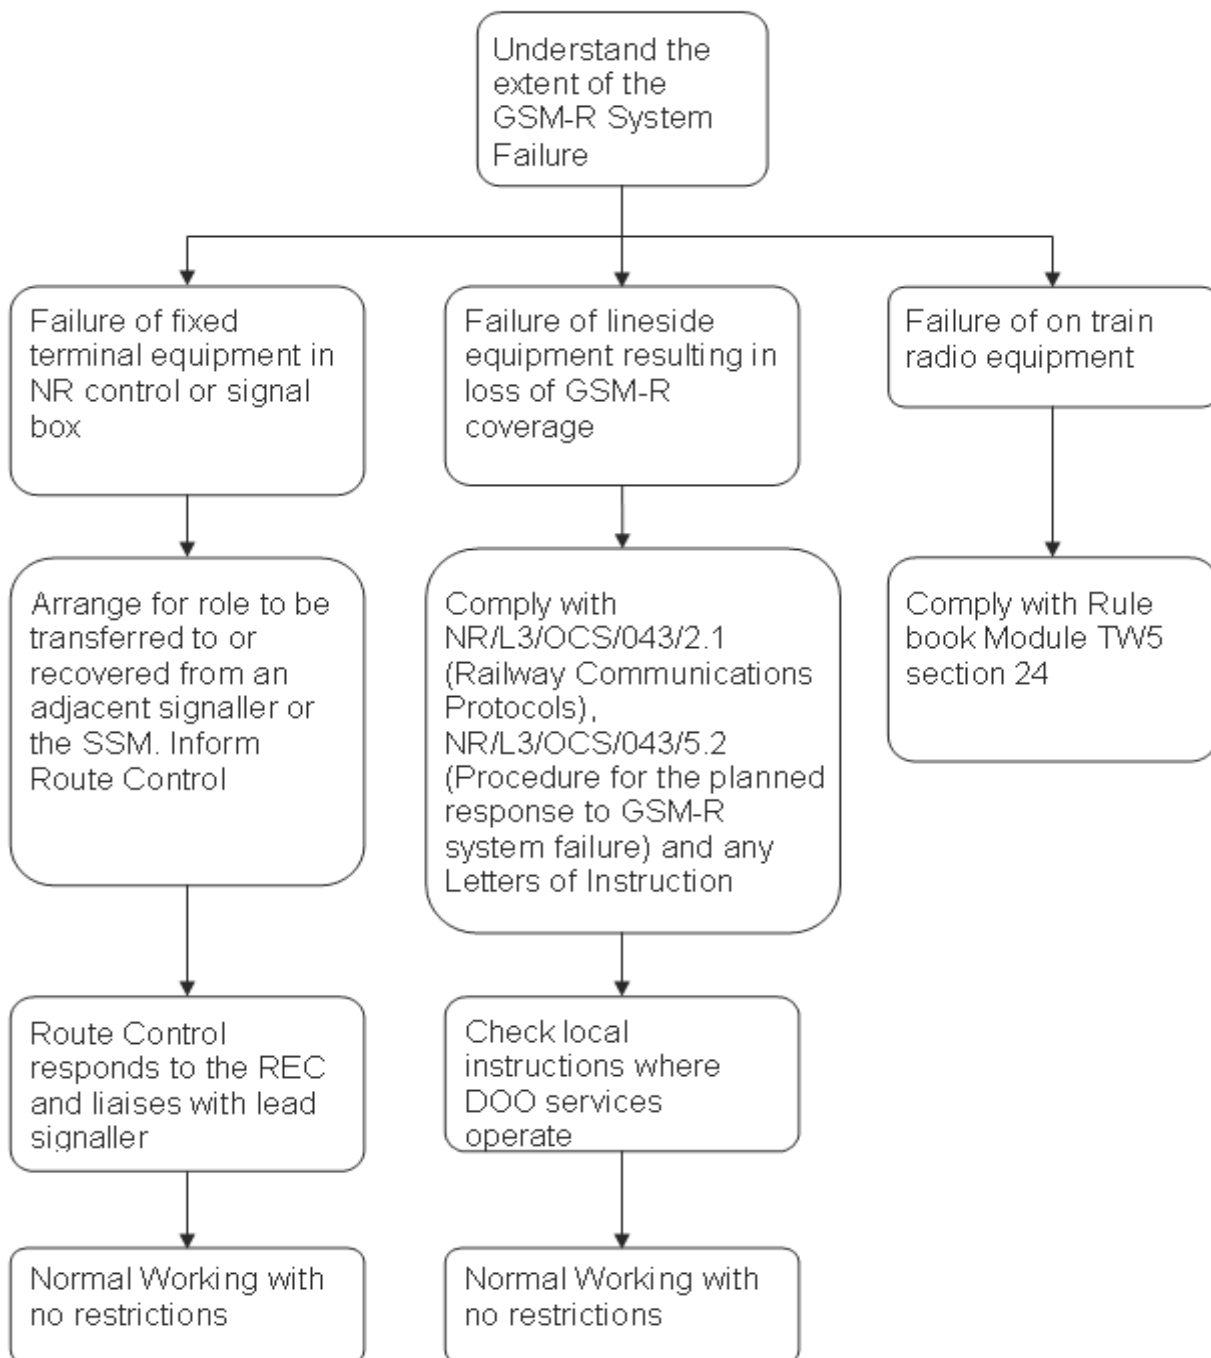

GSM-R FAULTS AND FAILURES RESPONSE**VERSION 1.1****PURPOSE**

To provide guidance on the response to onboard GSM-R system faults and local/area infrastructure faults.

Appendix covers the response to system faults from a single fixed terminal through to failures of the infrastructure resulting in loss of coverage in a geographical area.

APPENDIX

This chart details the process used by Network Rail Control to determine the operating response to GSM-R service or sub-system failures.

London North Eastern Route GI - Dated: 05/09/15

HAULING DEAD TRACTION UNITS

When more than two locomotives (including hauling and dead locomotives) are to be coupled together, it will not be necessary to obtain the authority of the Track Engineer, provided any conditions in the Route Availability for Diesel and Electric Locomotives are complied with.

London North Eastern Route GI - Dated: 07/12/13

INFRASTRUCTURE MONITORING TRAINS

Network Rail own a fleet of specially adapted Infrastructure Monitoring vehicles which operate frequently on most routes on all Network Rail routes, these vehicles are painted yellow and carry Network Rail logos. Trains with these vehicles in them generally operate with a 'Q' headcode so as to denote that they are line specific.

During movements, these vehicles can emit a powerful underframe light source which could be mistakenly identified as a binding brake or sparks being emitted from the bogies, and as such, does not require to be reported to the controlling Signaller. However, if in any doubt, then normal operating procedures should be applied.

London North Eastern Route GI - Dated: 11/04/15

INSTRUCTIONS FOR WORKING GROUND FRAMES AND GROUND SWITCH PANELS RELEASED FROM SIGNAL BOXES

Except where special instructions are issued, the following instructions and Rule Book Module SS2, Section 4.7 and Module TS1, Regulation 8, apply:-

1. When it is required, to operate a ground frame or ground switch panel, the operator must advise the Signaller of the intended movements and ask for the release, where necessary, operating the Permission or Switch lever. When the ground frame/switch panel is released, it may be operated as required.
2. When the movements have been completed and the ground frame levers/switches have been restored to normal, the operator must advise the Signaller who must then relock the ground frame/switch panel. The operator must not leave until he has ascertained that this has been done.
3. In the event of any failure of the apparatus, the operator must act in accordance with the instructions given by the Signaller.
4. The operator must advise the Signaller if a derailment occurs which fouls any of the running lines and take whatever action is necessary to protect the obstruction.
5. Additional instructions applicable to ground switch panels:
 - 5.1 Before authorising a movement, the operator must check that the indicators show the points to be set in the proper position and if Single Line Working is in operation, place and maintain reminder appliances on the point switches until the movement has passed clear of the points.
 - 5.2 When a ground switch panel is not in use, or if the operator has to leave the immediate vicinity of the ground switch panel when it is released, the cabinet door must be closed and locked.
 - 5.3 A crank handle or detachable handle and key is provided at most ground switch panels and must only be used in accordance with the instructions of the Signaller.
6. Additional instructions applicable to ground frames where separate telephone facilities are not provided:
 - 6.1 The "Attend Telephone" bell code 3-3-3 must be used by the person requiring to speak to the Signaller, or vice versa.
 - 6.2 At ground frames, where bell communication is provided with the signal box, the following code must be used if there is a failure of the telephone or in an emergency if it is the quickest method of contacting the Signaller:-

To Signal Box

Unlock ground frame	2
Train shunted clear of running line(s)-lock ground frame	3
Train on running line ready to depart-lock ground frame	5
These codes will be acknowledged by repetition when the ground frame has been unlocked/locked	
Running line(s) fouled	6

From Signal Box

Clear running line(s) for train to pass	7
To be acknowledged by repetition and code 3 sent when the line(s) have been cleared	

The call attention signal, 1 beat, must be sent and acknowledged before the required code is sent except when it is necessary to send the Running Lines Fouled bell signal.

- 6.3 Ground Frames unlocked by Annett's key taken from Signal box

The key must be inserted in the lock provided on the ground frame lever to release it. The key must be locked in the lever until it is restored to the normal position. The Annett's key must be returned to the signal box when the work has been completed.

London North Eastern Route GI - Dated: 01/12/07

Line Clear Verification (LCV)

In accordance with Network Rail Standard "NR/L3/OCS/084 - Line Clear Arrangements Following Engineering Works in Axle Counter areas - Line Clear Verification Process", the following must be observed.

The LCV process applies to the following line of routes.

LCV will also apply at any signalling location where part of the applicable possession is within any of the following line of routes listed below:

<u>Route</u>	<u>Sections of Line Equipped</u>
LN101 – Kings Cross to Shaftholme Jn	All Lines Between 0m 00ch at Kings Cross Station and Holloway 1m 40ch
LN101 – Kings Cross to Shaftholme Jn	Down Slow / Down Stamford line and Up Stamford line between 78m 35ch (ECM 1) 20m 13ch (PMJ) and 79m 79ch (ECM 1) 18m 48ch (PMJ) (Helpston Jn)
LN105 – Moorgate to Finsbury Park	All lines from Drayton Park 3m 07ch to Moorgate station 0m 00ch
LN115 – Copenhagen Junction to Camden Road Central	North London Incline 0m 00ch to 0m 07ch
LN120 Wood Green North Jn to Langley Jn via Hertford	Down Hertford line Between 28m 05ch and 29m 0ch Up Hertford Line between 32m 11ch and 34m 15ch
LN125 Hitchin, Camebridge Jn to Royston (Route Boundary)	Down Royston line Between 32m 11ch and 33m 75ch Up Royston line between 32m 11ch and 34m 15ch
LN126 Hitchin North Jn to Hitchin East Jn	Down Royston Flyover between 32m 53ch and 33m 32ch
LN3214 – Canal Junction to Belle Isle Junction	All Canal Tunnel line between 0m 52ch and 0m 48ch Down Canal Tunnel line between 0m 50ch and 0m 53ch
LN145 – MARHOLM JN TO GLINTON JN	Up and Down Werrington lines between 0m 00ch and 1m 64ch
LN170 WERRINGTON JUNCTION TO FLYOVER EAST JUNCTION VIA LINCORN	All Down and Up lines between 80m 12ch (WEB) to 83m 29ch (West Holmes Jn). All Down and Up lines between 85m 2ch (Pyewipe Jn Exclusive) and 98m 75ch (Gainsborough Trent West Jn)
LN195 GRANTHAM, NOTTINGHAM BRANCH TO ALLINGTON WEST JN (INCLUSIVE)	Down Grantham 109m 55ch to Netherfield Jn Up Grantham Netherfield Jn to 109m 50ch
LN200 WRAWBY JUNCTION TO PELHAM STREET JUNCTION	Up line from Pelham Street Jn 41m 26ch to Cherry Willingham 38m 40ch Down line from Pelham Street Jn 41m 26ch to Cherry Willingham 38m 15ch Down Barnetby 20m 78ch / Up Barnetby 20m 10ch to Wrawby Junction
LN627 NORTHALLERTON LONGLANDS JN TO NEWCASTLE EAST JN VIA COAST	Down Sunderland between 61m 01ch & 67m 06ch. Down Sunderland between 70m 17ch & 70m 71ch. Down Sunderland between 75m 10ch & 81m 64ch Up Sunderland between 60m 79ch & 67m 18ch. Up Sunderland between 70m 30ch & 71m 12ch. Up Sunderland between 74m 03ch & 82m 30ch. Up Cliff House Loop between 71m 12ch & 69m 45ch
LN632 Stockton Cut Jn. To Saltburn	All Up and Down Saltburn lines between 11m17ch and 14m 03ch. (Newport East Jn) All Up and Down Saltburn Slow Lines between 13m 64ch (Newport East Jn) to 15m 69ch (Whitehouse) All Up and Down Saltburn Fast Lines between 13m 64ch (Newport East Jn) to 15m 69ch (Whitehouse) All Up and Down Saltburn lines between 15m70ch (Whitehouse) and 16m 40ch Down Goods between 13m 44ch and 13m 64ch, Up Goods 1 form 13m 56ch to 13m 64, Up Goods 2 from 13m 21ch to 13m 64ch.
LN634 Guisborough Jn to Nunthorpe	Nunthorpe Single between 0m 00ch and 0m 17ch

London North Eastern Route Sectional Appendix Module LN1

LN646 NORTON-ON-TEES SOUTH JN TO FERRYHILL SOUTH JN	Down Ferryhill between 0m 00ch & 9m 09ch. Up Ferryhill between 9m 72ch & 0m 0ch
LN648 NORTON-ON-TEES WEST JN TO NORTHON-ON-TEES EAST JN	Down Norton Curve between 0m 28ch & 0m 00ch. Up Norton Curve between 0m 0ch & 0m 28ch
LN652 BILLINGHAM JN TO PORT CLARENCE JN	Down Belasis between 0m 00ch & 1m 03ch. Up Belasis between 1m 03ch & 0m 00ch
LN694 BENTON NORTH JN TO MORPETH NORTH JN VIA BEDLINGTON	All lines between Bebside level crossing 14m 67ch and Coatsworth Junction 16m 15ch
LN702 BEDLINGTON NORTH TO LYNEMOUTH ALCAN	Bedlington Junction 0m 0ch to Ashington 3m 05ch
LN736 CLEETHORPES TO NUNNERY MAIN LINE VIA RETFORD	All Lines Down Direction from 108m 32ch to 93m 22ch, Up Direction from 93m 22ch to 108m 38ch
LN740 GRIMSBY, MARSH WEST JN TO HUMBER ROAD JN	All Lines from Marsh West Junction (Inclusive) to Up Grimsby 108m 21ch Down Grimsby 108m
LN741 HABROUGH JN TO ULCEBY SOUTH JN	All
LN742 KILLINGHOLME TO BROCKLESBY JN	Up / Down Immingham 99m 72ch (Brocklesby East Junction Exclusive) to Immingham Reception Sidings (Exclusive)
LN744 ULCEBY NORTH JN to BARTON ON HUMBER	Down Barton Ulceby North Jn Inclusive to 101m 10ch Up Barton 100m 05ch to Ulceby North Jn Inclusive
LN752 WRRAWBY JN TO MARSHGATE JN	Down / Up Scunthorpe from 26m 20ch to Wrawby Jn Inclusive.
LN804 TAPTON JN TO GASCOIGNE WOOD (VIA SHEFFIELD)	All lines from Tapton Jn to 149m 62ch Down / 149m 20ch Up
LN806 TAPTON JN TO MASBROUGH JN	All lines from Tapton Jn to 147m 67ch Down / 147m 38ch Up
LN807 DORE SOUTH JN TO DORE WEST JN	Dore Single between 153m 75ch and 154m 34ch.
LN808 DORE STATION JUNCTION TO EARLES SIDING	Up Hope Valley between 164m 66ch and 0m 60ch
LN810 SHEPCOTE LANE WEST JUNCTION TO TINSLEY SOUTH JUNCTION	Down/Up South West Curve from Shepcote Lane West Jn 161m 24ch to Tinsley South Jn 161m 63ch
LN814 TINSLEY NORTH JUNCTION TO SHEFFIELD TRAM TRANSFER LINE	Down/Up Sheffield Tram Transfer line from Tinsley North Jn 0m 00ch to Change of Operational Rules 0m 12ch
LN815 PARKGATE JUNCTION TO SHEFFIELD TRAM PARKGATE TRANSFER LINE	Down/Up Parkgate Tram Transfer Line from Parkgate Jn 0m 00ch to Parkgate Stabling Section 0m 15ch
LN818 HOLMES CURVE	Down/Up Holmes Curve from Holmes Junction 0m 00ch to Rotherham Central Junction 0m 62ch
LN830 WOODBURN JUNCTION TO ALDWARKE JUNCTION	Up Tinsley Line from Broughton Lane Jn 1m 36ch to Aldwarke New Site 6m 39ch Down Tinsley line from Aldwakre New Site 6m 39ch to Broughton Lane Jn 1m 36ch
LN3201 ST PANCRAS TO TAPTON JN (VIA DERBY)	Oakley to Kettering Station Up fast, Down Fast lines from 53m 72ch to 71m 73ch & Oakley to Kettering North Jn Up Slow & Down Slow lines from 53m 72ch to 74m 00ch. Loughborough North Jn (Exc) to Derby North Jn (Exc) All Lines Down from 113m 07ch to 128m 04ch All Lines Up from 128m 04ch to 113m 46ch Wingfield (Exc) to Tapton Jn (Inc) All Lines Down 143m 17ch to 146m 59ch. All lines Up 146m 59ch to 142m 13ch

London North Eastern Route Sectional Appendix Module LN1

LN3204 TRENT SOUTH JN TO NOTTINGHAM EAST JN	All
LN3207 TRENT EAST JN TO CLAY CROSS NORTH JN	All
LN3228 TRENT EAST JN TO SHEET STORES JN	All
LN3232 WIGSTON NORTH JN TO HINCKLEY	Up line from route boundary to 2m 77ch (signal CT2982).
LN3249 LENTON SOUTH JN TO LENTON NORTH JN	All
LN3252 MANSFIELD JN TO TROWELL SOUTH JN	All
LN3255 RADFORD JN TO KIRKBY LANE END	All lines from Radford Jn to 127m 20ch
LN3261 TRENT SOUTH JN TO TOTON SOUTH JN	All
LN3264 ATTENBOROUGH JN TO MEADOW LANE JN	All
LN3501 DERBY LONDON ROADJN TO TAMWORTH (EXCLUSIVE)	All lines London Road Jnc (Inc) to Stenson Raynors UWC (Exc) 0m 00ch to 4m 16ch

LN898 NEVILLE HILL EAST JN TO HULL	All Down and Up lines between 20m 6ch (HUL1) to 6m 27ch (HUL1).
LN912 THORNE JN TO GILBERDYKE JN	All Down and Up lines between 02m 33ch (TGJ2) to 0m 00ch (Gilberdyke Jn).

London North Eastern Route GI - Dated: 09/09/2024

LINE OF ROUTE NUMBER REPLICATION

In order to facilitate production of 4 separate WONs for the LNE Territory (North, Centre, South and East Midlands), the NAU have allocated a second LOR number to all or part of some LORs listed in this appendix.

Only one of the replicated LORs has been built into this Sectional appendix, and the following table shows the relationship between replications.

LOR included in Sectional Appendix	Replicated LOR NOT shown in Sectional Appendix	Notes
LN101 - Kings Cross to Shaftholme Jn.	LN720 - Doncaster Black Carr to Skelton Bridge	Replicates part between Doncaster Black Carr and Shaftholme Jn
LN150 – Flyover East Jn to Decoy North Jn	LN722 – Flyover East Jn to Decoy North Jn	Complete LOR replicated.
LN170 - Werrington Jn to Flyover East Jn	LN726 - Gainsborough Lea Road to Flyover East Jn.	Replicates Gainsborough Lea Road to Flyover East Jn.
LN200 - Wrawby Jn to Pelham Street Jn	LN728 - Wrawby Jn to Pelham Street Jn	Complete LOR replicated.
LN210 - Newark Crossing Curve	LN732 - Newark Crossing Curve	Complete LOR replicated.
LN215 - Boultham Jn to Pyewipe Jn	LN734 - Boultham Jn to Pyewipe Jn	Complete LOR replicated.
LN600 - Shaftholme Jn. to Reston.	LN720 - Doncaster Black Carr to Skelton Bridge	Replicates part between Shaftholme Jn and Skelton Bridge
LN736 - Cleethorpes to Nunnery Main Line Jn (via Retford)	LN225 - Cleethorpes to Retford	Replicates Cleethorpes to Retford
LN748 - Retford Western Jn to Thrumpton West Jn	LN230 - Retford Western Jn to Thrumpton West Jn	Complete LOR replicated.
LN832 - Doncaster Bridge Jn to Saint James Jn	LN240 - Doncaster Bridge Jn to Saint James Jn	Complete LOR replicated.

NOTE: The only exception to the above is for the *Holgate Jn to Skelton Jn* Line of Route which is replicated in Module 3 under LN618 and in Module 7 under LN724.

London North Eastern Route GI - Dated: 03/10/2020

LOCKOUT PROTECTION SYSTEMS

STAFF PROTECTION SYSTEMS (LOCKOUT)

The provision and application of Staff Protection Systems (often referred to as Lockouts), are of the following types: -

A LOD (E) system inhibits moves in both directions on a section of line including moves into and out of the Protected Area and is a Captive Key system where the key is normally retained in the instrument.

A LOD (K) system prevents signalled moves into the Protected Area and is a Captive Key system where the key is normally retained in the instrument.

A LOD (T) system prevents signalled moves into the Protected Area and is a Key Enabled system where the authorised user must obtain the key before operation can commence.

LOD (P), system prevents signalled moves against one direction of traffic on a Bi-directional line, enabling staff to utilise lockout protection for a single direction. It is a Key Enabled system where the authorised user must obtain the key before operation can commence.

The LOD (E), LOD (K), LOD (T), equipment may be used as an alternative to the protection arrangements outlined in Rule Book Modules TS1, Regulation 13, and Handbook 8, however all relevant Rules for establishing a Safe System Of Work must be complied with.

The person requesting protection using the above equipment must be either a certified "Controller of Site Safety" (COSS), an "Individual Working Alone" (IWA), "Safe Work Leader" (SWL), or a "Protection Controller" (PC) who has been trained and authorised to use the specific lockout and if it is a Key(s) Enabled System, issued with the appropriate key(s). LOD (E) systems may also be used by authorised TOC & FOC staff, where appropriate and Staff have been trained.

In this instruction, where the instruction refers to the COSS, the instruction also applies to an IWA/ SWL/ PC/ TOC & FOC Staff, where appropriate and Staff have been trained.

Only in exceptional circumstances may the COSS hand over to relief provided they advise the signaller of their name, employer, location and contact telephone number.

The area of protection provided by the lockout system is normally displayed and clearly defined in the lockout cabinets. The COSS should ensure the area of protection provided by the lockout provides adequate protection for the activity / work. When required, permission may be requested for the use of more than 1 lockout system and / or may cover more than one line. All communications regarding the protection arrangements must be made directly between the Signaller and the authorised COSS.

The Signaller must, before granting any lockout protection, ensure that protecting signals are placed and maintained at Danger and routes leading to the protected area are cancelled and the protected area is clear of trains. The Signaller should not authorise any un-signalled moves into the area covered by the lockout(s) when in use. The COSS must advise the signaller of any failure of operation of the lockout unit / system, or if a lockout key is lost / damaged, immediately considering the protection as no longer in place. Signallers when making entries in the TRB need not issue authority numbers unless specifically outlined in local instructions.

Other instructions, variations to the above instructions and alternative local protection systems are covered in the Local Instructions sections and / or Signal Box Local Instructions.

Obtaining permission to use a LOD (E), or a LOD (K)

The COSS must telephone the Signaller giving their Name, Employer, location and contact telephone number. They must state which "lockout" section(s) they require to be protected and for how long. If use of the "lockout" is agreed, the Signaller must record these details in the train register book and repeat them back to the COSS who must confirm they are correct. Then the Signaller may operate the Key release and instruct the COSS to remove the Lockout Key.

When permission to use the LOD (E), or LOD (K) is to be given up

When the protected area(s) is/are clear and safe for trains to run on, the COSS must advise the Signaller of his/her Name, Employer and location. When advised to do so by the Signaller, the COSS must replace the Key, and return it to the locked "traffic" position. The Signaller must be advised and he/she must check that the normal indication has been restored, advising the COSS person and make an entry in the train register.

Obtaining permission to use a LOD (T)

The COSS must telephone the Signaller giving their Name, Employer, location and contact telephone number. They must state which "lockout" section(s) they require to be protected and for how long. If use of the "lockout" is agreed, the Signaller must record these details in the train register book and repeat them back to the COSS who must confirm they are correct. The Signaller should then instruct the COSS to insert the Key and turn it to the operate position, the signaller will then operate the release and instruct the COSS to operate the "locked out" button / switch. The COSS should then observe the "locked out" indication has illuminated correctly and advise the signaller, then turn the key to the normal position and remove the KEY.

When permission to use the LOD (T) is to be given up

When the protected area(s) is/are clear and safe for trains to run on, the COSS must advise the Signaller of his/her Name, Employer and location. When advised to do so by the Signaller, the COSS must insert the Key, turn it to the "operate" position and observes the "locked out" indication illuminates. The signaller then operates the "Traffic Cancel Control" and COSS operates the "Traffic" button / switch to return it to the "traffic" position. The COSS should then observe the "traffic" indication has illuminated correctly and advise the signaller then turn the key to the normal position and extract the Key.

London North Eastern Route Sectional Appendix Module LN1

The Signaller must be advised and they must check that the normal indication has been restored, advising the COSS and make an entry in the train register.

Obtaining permission to use a LOD (P)

The COSS must telephone the Signaller giving their Name, Employer, location and contact telephone number. They must state which "lockout" section(s) they require to be protected and for how long. The COSS should be aware and record clearly on the SSOW briefing pack that traffic will still be able to be signalled and run normally in one direction within the protected area and confirms this with the signaller. If use of the "lockout" is agreed, the Signaller must record these details in the train register book and repeat them back to the COSS who must confirm they are correct. The Signaller should then instruct the COSS to insert the Key and turn it to the operate position, the signaller will then operate the release and instruct the COSS to operate the "Patrol" button / switch. The COSS should then observe the "Patrol" indication has illuminated correctly and advise the signaller, then turn the key to the normal position and remove the KEY.

When permission to use the LOD (P) is to be given up

When the protected area(s) is to be given up, the COSS must advise the Signaller of his/her Name, Employer and location. When advised to do so by the Signaller, the COSS must insert the Key, turn it to the "operate" position and observes the "Patrol" indication illuminates. The signaller then operates the "Traffic Cancel Control" and COSS operates the "traffic" button / switch to return it to the "traffic" position. The COSS should then observe the "traffic" indication has illuminated correctly and advise the signaller then turn the key to the normal position and extract the Key. The Signaller must be advised and they must check that the normal indication has been restored, advising the COSS and make an entry in the train register.

Lockout systems are provided between the following locations: -

<u>Line of Route</u>	<u>Sections of line equipped</u>	<u>Type of Lockout if specified</u>	<u>Lockout No.</u>	<u>Type of Key System used</u>	<u>Additional information</u>
LN101 KINGS CROSS TO SHAFTHOLME JN	Platform 0	LOD (E)	YA5001	Key enabled	Kings Cross station Platform area between the Buffer stops and the platform signal
	Platform 1 & 2	LOD (E)	YA5007	Key enabled	
	Platform 3 & 4	LOD (E)	YA5013	Key enabled	
	Platform 5 & 6	LOD (E)	YA5019	Key enabled	
	Platform 7 & 8	LOD (E)	YA5025	Key enabled	
	Platform 9	LOD (E)	YA5031	Key enabled	Kings Cross station beyond the platform signals to Belle Isle
	Platform 10	LOD (E)	YA5037	Key enabled	
	Line A & B	LOD (K)	YA5043	Key enabled	
	Line C & D	LOD (K)	YA5049	Key enabled	
	Line E & F	LOD (K)	YA5055	Key enabled	
	Canal Junction	LOD (K)	YA5087	Key enabled

LOCOMOTIVES ASSISTING IN REAR OF TRAINS

1. Trains may be assisted in rear between the places listed below.
2. The assisting locomotive must be coupled to the train except where denoted below by the letter "N".
3. Any type of train may be assisted in rear except where denoted below by:-
 - F - freight trains only
 - ECS - empty coaching stock trains only
 - P - passenger trains only
 - RES - Royal Mail trains only
4. A shunting locomotive must not be used to assist in rear, nor must a train hauled by a shunting locomotive be assisted in rear, except where denoted by letter "D".
5. The locomotive attached in rear of the train must not apply power where denoted below by the letter "R".

From	To	Type of Train	Conditions	Remarks
LN101 – KINGS CROSS TO SHAFTHOLME JN				
Kings Cross Bounds Green	Ferme Park) or Bowes) Park) Kings Cross)	ECS *	R	* ECS trains formed of Non Push-Pull stock with a Main line locomotive attached in rear. 1. The ETH must be coupled to the rear locomotive and NOT the leading locomotive. 2. The Driver of the rear locomotive must place the reverser in the direction of travel. 3. If the rear locomotive is an electric locomotive the pantograph must be raised. The Signaller must treat the train as an electric train irrespective of the leading locomotive. 4. The Driver of the rear locomotive if electric must:- (a) isolate the E70 brake unit. (b) place the master switch to "Off". On arrival at Ferme Park, Bounds Green or Kings Cross the Driver must de-isolate the E70 brake unit.

LORAM C21 RAIL GRINDER

General

There are three rail grinding trains in the Loram C21 series, numbered C2101, C2102 and C2103.

Rail grinding train C2101 has a route availability of RA7, rail grinding trains C2102 and C2103 have a route availability of RA6.

All Loram Class C21 rail grinding trains are approved to travel on routes cleared to W6a gauge.

All Loram Class C21 rail grinding trains **can** be relied upon to operate track circuits.

Where axle counters are used as the primary means of train detection the Special Train Reminder procedure (where provided) is to be used when grinding operations are taking place on lines open for normal working.

Route prohibitions or restrictions for LNE Route

The Loram C21 rail grinding trains are not permitted to run on the Northern City Line from Finsbury Park (exclusive) to Moorgate (inclusive).

The Loram C21 C2102 and C2103 rail grinding trains are not permitted to run on the Up and Down Moorgate lines between OLE structure FO2/66 (opposite Kentish Town track sectioning cabin) and Farringdon.

Transit moves

The maximum permitted speed of the rail grinding trains is 55 mph.

Transit over 3rd or 4th rail DC electrified lines is permitted under the following conditions:

- The electrified rails are isolated in accordance with appropriate instructions, **OR**
- The 'spark blankets' are removed, **OR**
- The 'spark blankets' are secured within the W6a load gauge.

Grinding operations

Notification must be given to TOCs and FOCs which operate on the routes where grinding is to take place so that drivers may be informed.

Grinding operations are permitted to take place both within T3 possessions and on lines open for normal working.

The speed when grinding is approximately 5 mph.

Grinding operations are only permitted on jointed or continuously welded plain track; grinding operations on switches and crossings are specifically excluded.

Rail grinding train C2101 is not permitted to grind within tunnels.

Rail grinding trains C2102 and C2103 are permitted to grind within tunnels, subject to the necessary risk assessment by the train operator.

The train operator is responsible for ensuring that grinding equipment does not damage track-mounted equipment or level crossing decks.

Grinding operations over 3rd or 4th rail DC electrified lines are permitted under the following conditions:

- The electrified rails are isolated in accordance with appropriate instructions, **AND**
- The 'spark blankets' are fitted

Loram Class C21 rail grinding trains may be authorised, in accordance with Rule Book Module TW7, Clause 1.1 to make a wrong-direction movement for the purpose of extinguishing a lineside fire only, should the Operator request it. **A wrong-direction movement may only be authorised by the appropriate Signaller.** Rail grinding trains are equipped with on-board damping water spray and fire fighting water cannon.

All staff on or about the line are prohibited to be within 10m (approximately 10 yards) of the train whilst grinding operations are being carried out due to the danger of objects being emitted beyond the machine's shields. The machine operator will look out for any staff on or about the line who may be within this distance and cease operations if this is the case. Similarly, any person on a station platform will cause grinding operations to cease.

Grinding operations on lines open for normal working with Simplified Bi-directional Signalling (SIMBIDS) in operation on the opposite line

If the rail grinding train is to operate on lines open for normal working with SIMBIDS in operation on the opposite line, the signal applying to the line on which the rail grinding train is operating and which protects the crossover at the end of the grinding site, and through which trains from the line being used for SIMBIDS are being returned to the proper line, must be fitted with an operational TPWS train stop (TSS)

Dated: 04/09/10

LUCAS TRACK CIRCUITS

The above type of track circuit is liable to produce a wrong side failure when occupied by a vehicle fitted with a track circuit actuator. Vehicles fitted with operative Track Circuit Actuators (this includes ALL Class 14X, 15X, 16X, 170 and 22X units) must NOT run over the following lines:-

Great Coates No.1 to Immingham East Jn

Ferrybridge Power Station lines

London North Eastern Route GI - Dated: 27/12/18

Modified Working Arrangements on Single lines Rule Book Module P2 Section 7

Introduction

Prior to the introduction of Working by Pilotman, Modified Working may be authorised by the Network Rail Route Control Manager (East Midlands) Responsible Person (LNE), for a period of up to two hours, or until a Pilotman arrives.

In exceptional circumstances the period of up to two hours may be extended subject to the agreement of the Network Rail Route Control Manager (East Midlands) Responsible Person (LNE), the Responsible Person and the Train/Freight Operating companies involved.

In the event of signalling equipment failure on the single lines listed in the table and a Pilotman is not readily available, modified working may be introduced providing:

The Signaller is able to work the points giving access to/egress from the single line or they can be set and detected for the passage of trains.

Direct verbal communication is available between all Signallers involved and the Responsible Person.

Method of working

In the event of a failure of signalling equipment the Network Rail Route Control Manager will decide whether a Pilotman is available or, if not, consider authorising Modified Working.

If Modified Working is authorised, a Responsible Person will be appointed who will ascertain that the single line concerned is clear and that the last train passed clear complete with tail lamp. When this has been done, the Responsible Person will give permission for the Signaller to issue/dictate a Modified Working ticket RT3177 to authorise the passage of the next train. This procedure will be repeated by the Responsible Person for each train which passes over the single line under Modified Working arrangements.

During Modified Working

Once the Signaller has been given authority by the Responsible Person and the arrangements have been confirmed with any other Signaller involved, and the line is clear in accordance with the train signalling regulations the signaller may then issue/dictate the RT3177 ticket to the Driver and advise them of any additional information.

When the Driver has read back all the information on the RT3177 ticket along with any additional information and the Signaller is satisfied that a clear understanding has been reached, the Signaller may authorise the Driver to pass the protecting signal at Danger and proceed cautiously.

Once a train has been admitted to the single line under Modified Working arrangements, the Signaller(s) concerned must not authorise any subsequent train (except to assist a failed train) to pass the protecting signals for the single line until it has been confirmed that the train has passed clear of the single line complete with tail lamp.

Once the train has passed clear of the single line, the Driver must, if previously instructed to do so, stop at the location identified on the RT3177 and contact the Signaller controlling the exit from the single line. The Driver must confirm if the train is complete with tail lamp.

In the event of a failed train, obstruction or any other exceptional circumstance, a clear understanding must be reached between the Responsible Person, all Signallers and Drivers involved before any further movement is authorised.

Lines Where Modified Working is authorised

Manual Power Changeover Sites (MPCO) for Bi Mode trains

As part of the introduction of the Intercity Express Train (IET) lineside signage has been installed at publicised strategic locations across LNE, Anglia, LNW & Scotland. This signage is a prompt to the driver to raise the pantograph and change traction mode from Diesel to Electric dynamically at up to permissible line speed at that location. Some sites have been designed to deal with power deficiencies to support the increased electric trains operating within the current timetable and may be applicable only at certain times for certain trains.

The following signs have been provided at the MPCO zone consisting of three signs. These signs are only applicable to Bi-mode Class 800 and 802 trains operating in DIESEL mode. Any arrangements for coasting and associated Pantograph raising are to be treated separately from these instructions and signs.

Drivers must adhere to their own specific companies operating instructions for specifics about length of requirement to stay in diesel mode.

Manual Power Changeover Signage – Diesel to Electric Mode (D>E)	
Sign	Action
	<p>Advance Traction Changeover Sign</p> <p>As the train passes the 'advance traction changeover' sign the driver must prepare to carry out a dynamic manual changeover (D>E) – this must NOT be done before the front of the train reaches the 'raise pantograph' sign.</p>
	<p>Raise Pantograph Sign</p> <p>The driver must wait until the front of the train has reached this sign before initiating a dynamic manual changeover (D>E).</p>
	<p>Do NOT Raise Pantograph Sign</p> <p>If the pantograph(s) has not been raised by the time the front of the train reaches this sign, there must be no attempt made to raise the pantograph/select Electric Mode when speed is in excess of 20mph. The train must continue in Diesel Mode until the train is subsequently stopped or its speed reduced to 20mph or less.</p>

Modified Working Arrangements on Single Lines P2 Section 7

Modified working as per rule book P2 section 7 is authorised on the following lines UP & Down Apperley & UP & Down Baildon between the signals listed in the table below.

Single line Direction	From signals	To signals
Dn Apperley	L3921	L3937
Up Apperley	L3938	L3918
Dn Baildon	L3962 / L3964 & L3966	L3945 & L3943
UP Baildon	L3942	L3971 / L3969 & L3967

Forms NR_L3_OPS_045_F3.30B & NR_L3_OPS_045_F3.30C are to be completed as per NR_L3_OPS_045_3.30 7.27 & 7.28

If more than 2 hours has elapsed since Modified Working was introduced no further authorities are to be granted for trains to pass over the single line under this procedure and pilot working must be introduced. Modified Working procedure can only be used once per incident.

The signaller on Leeds North west must record the train movements on to & off the single line in the Occurrence book or TRB

If Modified working is introduced on the Up & Down Appley line then it must **NOT** be introduced on the Up & Down Baildon

If Modified working is introduced on the Up & Down Baildon line then it must **NOT** be introduced on the Up & Down Appley line

London North Eastern Territory GI - Dated:18/04/23

MULTIPLE UNIT TRAINS EQUIPPED WITH AUTOMATIC COUPLERS

To assist staff in identifying automatic couplers which could be damaged by coupling the train to another train, T&RS staff will fix a yellow and black "Non - multi" sign to the offside windscreen of the cab concerned so that the sign will be directly opposite the driver of another train.

During normal working, no attempt should be made to couple an automatic coupler so identified.

In the event of a train equipped with automatic couplers becoming disabled and requiring assistance, the Driver of the disabled train must, when requesting assistance, specifically advise the Signaller whether or not a "Non multi-" sign is displayed in either of the end cabs of the train. Similarly, the driver of the assisting train, before proceeding towards the disabled train, must specifically advise the Signaller whether or not a "Non Multi-" sign is displayed in the cab at the end which would be coupled to the disabled train.

If circumstances arise where assistance can only be provided in such a manner that one or other of the cabs to be coupled has a "Non Multi-" sign displayed, technical advice must be obtained. Under no circumstance should any attempt be made to couple the trains until this advice is received. Technical authority may be granted to couple the trains using the automatic couplers but subject to conditions which will be specified at the time. If such authority is not granted, it will be necessary to use an emergency coupling.

London North Eastern Route GI - Dated: 02/12/06

MARK IV DOOR BARRIERS/ ATTENDANTS

There is a procedure in place for use when there is delay to a Mark IV train not at a designated platform and the train air conditioning is not available.

When such a failure exists, in addition to the standard Rules, the Traincrew will work in accordance with train operator instructions, which requires the Driver to establish that there is no danger to the train from damaged overhead line equipment. After the safety of the train has been established, the Driver will liaise with the Signaller as to whether after the door barriers or door attendants are in position, two train doors can be opened to assist the flow of fresh air through the train.

If the failure occurs on a two-track formation or on a multi track formation when the train is on the line adjacent to the cess. Provided the train is not standing at a place where it would be dangerous to open doors, e.g. on a viaduct, in a tunnel or where there is limited clearance, the barriers or attendants may be placed in position and two of the cess side doors opened. On no account must doors be opened on the six-foot side.

If the failure occurs on a multi-track formation and the train is not on a line adjacent to the cess, the Traincrew must assess the situation and decide if sufficient clearance exists before advising the Signaller and requesting that all trains over the adjacent line to the side on which doors are to be opened are cautioned and Drivers advised of the circumstances. When the Traincrew and the Signaller have reached a complete understanding about what is to be done, the barriers/attendants may be placed in position and the two doors opened.

If there is any doubt whether sufficient clearance exists the Traincrew must request that one adjacent line be blocked to traffic. Before the Signaller agrees to such a request, Network Rail Control must be consulted, Network Rail Control will liaise as necessary with train operators Control in order to agree priorities. When a strategy has been agreed, the appropriate line must be blocked to traffic and the traincrew advised. In these circumstances train movements over the blocked line must not resume until an assurance is received from the Traincrew that all doors have been closed.

Where it is known in advance that the OHL power will be off for some time or a train on which the air conditioning has failed will be stopped for some time, every effort should be made to route that train onto an appropriate line with an adjacent cess.

London North Eastern Route GI - Dated: 25/02/2023

Opening droplight or quarterlight windows

Where vehicles are operating with manually opening droplight or quarterlight windows, the Train Operating Company must have a suitable safe system of work to mitigate the risk of injury associated with persons leaning out of windows

Overlay Miniature Stop Light Level Crossings (OMSL)

A Miniature Stop Light (MSL) is the conventional active warning system used to give indications at private user worked crossings, public bridleway and footpath crossings. Indications provided for the user to determine that the crossing is safe to cross (green) or not safe to cross (red). The system is designed to overlay existing infrastructure without interacting with it, however permissible speeds in the wrong direction on the approach should be identified on multiple track lines with wrong direction speed boards. It is expected that train detection inputs to the system will usually be provided as part of the system and typically these systems may be referred to as "EBI Gate 200" or "VaMoS", although other systems may be used. The system is usually activated by wheel sensors that operate in a similar way to Axle Counters, when they detect a train they set the lights to red, when the train hits the strike out sensor the lights go to green.

Where a system failure is detected or operational scenario (e.g. train failure, slow trains, engineering works) may incur the red (not safe to cross) indication for excessive periods, user indications are suppressed. On encountering this mode the user is directed on safe operation by the signage provided, however they can be reactivated by another train passing or through a manual reset.

Would all staff please note that, like Axle Counters, using metal tools or simply passing by within a metre wearing safety boots can cause activation of these sensors and should be avoided.

London North Eastern Territory GI - Dated: 02/06/18

Proceeding over a manned level crossing equipped with non block signals operated by a crossing keeper during signal failure/disconnection of equipment or Single Line Working

At the level crossings listed the protecting signals are not part of the block signalling and are only provided to protect the level crossing.

During a signal failure/disconnection of equipment the driver will receive a green hand signal from the crossing keeper as authority to proceed over the level crossing irrespective of the aspect/indication shown at that protecting signal at locations on the lines indicated below:

Ulceby North Jn to Barton on Humber (LN744-LN5)

Barrow Road

Mansfield Woodhouse to Shireoaks Jn (LN768-LN5)

Norwood

York to Scarborough (LN880-LN7)

Howsham

Leeds Armley Jn to York Skelton Jn (via Harrogate) (LN838-LN7)

Belmont (Up direction only* - SPT provided on Down direction signal)

Wilstrop

Marston Moor

Hull to Seamer West Jn (LN914-LN7)

Gristhorpe

King Edward Bridge Jn to Carlisle North Jn (LN682-LN8)

Milton Village

Bedlington North Jn to Lynemouth Alcan (LN702-8)

North Seaton

The Driver having received the green handsignal must regulate the speed of the train in accordance with the aspect/indication previously displayed at the section signal.

During Single Line Working at those locations shown below a green handsignal will be displayed at the crossing as authority for movements in the wrong direction to proceed over the crossing.

Nottingham East Jn to Newark Castle (LN3625-LN4)

Fiskerton Station

Mansfield Woodhouse to Shireoaks Jn (LN768-LN5)

Norwood

York to Scarborough (LN880-LN7)

Howsham

Leeds Armley Jn to York Skelton Jn (via Harrogate) (LN838-LN7)

Belmont

King Edward Bridge Jn to Carlisle North Jn (LN682-LN8)

Milton Village

Bedlington North Jn to Lynemouth Alcan (LN702-8)

North Seaton

London North Eastern Route GI - Dated: 08/12/2018

PROTECTING A STABLED TRAIN ON A PLATFORM LINE

The following locations are permitted to have trains stabled in the platform during a Line blockage using TS1, 13.2

- St Pancras Station Platform 1-4
- Luton Station Platform 2
- Bedford Station Platform 3
- Leicester Station
- Nottingham Station
- Hull Paragon Station
- Kings Cross Station

When a platform line is to be blocked under Rule book procedure TS1, 13.2 and a train is stabled on that line, the COSS must supply and ensure that the following protection is placed on the train before authorising the work to start:

- During daylight - a NOT TO BE MOVED board.
- During darkness or fog and falling snow - a red light (steady or flashing).

You must make sure the protection is displayed on the platform side of the train:

- at the end from which the train is to be driven, or
- at both ends of the train if it can be driven from either end.

The following locations are permitted to have trains stabled in the platform during a T3 possession

- Kings Cross Station
- Peterborough Station
- St Pancras Station Platform 1- 4
- Nottingham Station

When a platform line is to be blocked by a T3 possession and a train is stabled on that line, You and the PICOP must agree

- Any train in the platform is at a stand
- The PICOP has been advised of the lines affected
- The details are to be recorded on the T3 form when the possession is taken

You may take possession without the requirement for this to be published.

In addition to the above for Peterborough station only you must also ensure

- NOT TO BE MOVED boards are applied during daylight or
- During darkness, fog and falling snow a red light (flashing or steady) is provided

These are to be provided on the platform side and to each end the train can be driven from

Trains are authorised to stable at Peterborough Station

In addition to the above for St Pancras Station, the worksite can also be taken around the stabled protected train on a platform line (Plat 1 – 4) and a 2m exclusion zone beyond any stabled train imposed.

In addition to the above for Nottingham Station, the worksite can also be taken around the stabled protected train on a platform line and a 2m exclusion zone beyond any stabled train imposed.

- Dated: 27/09/2024

RAILWAY CRIME

All railway staff must be vigilant to railway crime and cable theft, and report any suspicious activity on the operational railway, or in the area of electrical substations, to the controlling signaller.

Some examples of suspicious activity could be:

- Anyone not wearing appropriate PPE, or that do not appear to have a safe system of work.
- Anyone not responding to a train drivers warning, or appearing to hide as trains or people approach.
- Vehicles that do not have any company markings or logos
- Signalling location cabinets with doors open or missing, or troughing lids newly disturbed, with no staff nearby.
- People 'loitering' in the area of electrical substations.

In such cases, please inform the controlling signaller as quickly as possible giving precise location details. Drivers do not need to stop their trains immediately to report this, unless they consider it a safety of the line issue.

National GI - Dated: 30/08/2014

SEMI-AUTOMATIC TRAIN WARNING SYSTEM (SATWAS)

Network Rail (NR) is improving track worker safety, by introducing higher integrity warning systems that do not require lookouts to be positioned to warn of approaching trains, these systems include SATWS.

SATWS will give track workers sufficient audio and visual warning of approaching trains within the required derived warning time (minimum 25 seconds) to locations where sighting of trains is difficult and / or traffic density is high, precluding line blocks being taken for protection and to meet NR's target of zero unassisted lookout working.

The system can only be operated by trained operators who hold the required competence and who have received the required briefing on associated SBSI requirements attached to the safe use of this track warning system.

The SATWAS system applies to the following locations and lines of route.

LOR	Line of Route description	Section of Line Equipped	Worksite Area
LN101	Kings cross to Shaftholme Jn	Down Slow 42m 66ch to 44m 00ch wn Fast 42m 66ch to 44m 00ch Up Fast 44m 00ch to 43m 59ch Up Slow 44m 00ch to 43m 59ch	Sandy South Jn.to Sandy Station, Down Slow Sandy South Jn.to Sandy Station, Down Fast Sandy station to Sandy South Jn., Up Fast Sandy station to Sandy South Jn., Up Slow

London North Eastern Route GI - Dated: 06/04/2024

SANDITE APPLICATION AND RAIL CONDITIONING TRAINS

1. Types of rail conditioning trains
 - 1.1 The Railhead Treatment Train (RHTT) consists of converted and specially-adapted wagons hauled by a locomotive at each end
 - 1.2 The Multi-Purpose Vehicle (MPV) consists of a specially-built unit with driving cabs at each end.
 - 1.3 Where a DMU is used this consists of a specially modified class 117 or 121.
 - 1.4 All types of train carry out conditioning of the railhead during autumn by a combination of water jetting and the application of sandite traction gel.
2. Speed
 - 2.1 The maximum speed of trains when water jetting and applying sandite is 60mph, except for the West Coast South route where the permitted speed is 60mph when water jetting only.
3. Notices
 - 3.1 Notices will be produced detailing the locations where sanditing and water jetting will take place.
 - 3.2 Operations Control must advise signallers of any deviation from the railhead treatment plan which may be agreed to cater for exceptional circumstances or to treat a problem location not normally treated.
 - 3.3 Signallers must pass details of changes to the booked plan to the train if instructed to do so by Operations Control.
4. Signalling arrangements
 - 4.1 Rail conditioning trains will be described, where possible, by train description code 3Jxx when operating water jetting-only diagrams.
 - 4.2 Rail conditioning trains will be described, where possible, by train description code 3Sxx when operating diagrams that apply sandite.
 - 4.3 Where train describers are not in use the rail conditioning train will be described by special bell signal or special Is Line Clear signal 3-4-2.
 - 4.4 All types of rail conditioning trains may be relied upon to operate track circuits whether applying sandite or not. When applying sandite, signallers must specially observe the passage of the train and the next train to follow over track circuits, where provided.
 - 4.5 Signallers must deal with any failure by the train to operate a track circuit correctly by immediately applying Rule Book Module TS11, Regulation 14 and advising Operations Control of the failure. Rule Book Module TS1, Regulation 12 must be applied to all subsequent trains over the affected portion of line until at least 2 trains have operated the track circuit normally.

National GI - Dated: 10/12/16

SIGNAL REMINDER BOARD

The following sign consists of a black exclamation mark on a white background within a red triangle and may be provided on the approach to signals at certain locations. The supplementary information sign consists of black letters on a white background. The purpose of the sign is to remind Drivers of the presence of a signal ahead in an effort to reduce the incidence of signals being passed at Danger at the location concerned.

The locations of these boards will be published in Section 'C' of the Weekly Operating Notice as and when they are erected.

London North Eastern Route GI - Dated: 02/12/06

SPEED RESTRICTIONS TO/FROM SIDINGS AND YARDS

Unless indicated otherwise by speed signs, the Permissible Speed over the connections to sidings and yards is as follows:-

- 15mph for North East and Great Northern areas covered by Sections LN2, LN3, LN5, LN6, LN7 and LN8
- 5mph for East Midlands area covered by Section LN4 only

London North Eastern Route GI - Dated: 02/12/06

STONETHROWING

On receipt of a report from a Driver of stonethrowing or use of air rifles the Signaller must, in addition to advising Network Rail Route Control and the BT Police:

1. Advise the Driver of the first train requiring to proceed through the area concerned, on any line, of the circumstances and request him to report back once the train has passed through the area whether stonethrowing / shooting occurred or not. The train must not be cautioned.
2. Where another Signaller is involved, he must be advised of the circumstances and requested to advise Drivers in accordance with this procedure, or to pass on any message received from the Driver of a train which has passed through the affected area.
3. Where the following train requires to pass through the area on the same line, or a second train requires to pass in the opposite direction, before a report is received from the Driver of the first train, the foregoing arrangements must again be observed.
4. If the Driver of the first train dealt with as above also reports that his train was stoned / shot at, the Drivers of subsequent trains must be advised in accordance with paragraph 1.
5. If no further report is received about stonethrowing / shooting from the Driver of a train(s) dealt with above, Network Rail Route Control must be advised and normal working resumed.

London North Eastern Route GI - Dated: 02/12/06

STEAM TRAIN INSTRUCTION (NEW OHL)

The following locations have Overhead Line Equipment (OLE) with very low contact wire heights and steam locomotives are not to be stopped at these locations to avoid any damages to the OLE due to emissions from steam locomotive chimneys:

Location	ELR	Line	Mileage	Structure
Between Kettering Station and Market Harborough Station	SPC3	Up Main & Down Main	77m 64ch to 77m 75ch	Overbridge No. SPC3-40 Pipewell Road
Between Kettering Station and Market Harborough Station	SPC3	Up Main & Down Main	78m 16ch to 78m 24ch	Overbridge No. SPC3-39 B576 Harborough Road
Between Kettering Station and Market Harborough Station	SPC3	Up Main & Down Main	78m 49ch to 78m 60ch	Overbridge No. SPC3-38 Judges / Straight Furlong
Between Market Harborough Station and Wigston South Junction	SPC3	Up Main & Down Main	83m 47ch to 83m 71ch	Overbridge No. SPC3-28D & 28E
Between Market Harborough Station and Wigston South Junction	SPC3	Up Main & Down Main	89m 12ch to 89m 18ch	Footbridge No. SPC3-16B Kibworth Harcourt
Between Market Harborough Station and Wigston South Junction	SPC3	Up Main & Down Main	89m 79ch to 90m 8ch	Overbridge No. SPC3-15 Wistow Road

East Midlands Route GI – Dated: 28/07/2024

This page is intentionally blank

UNITS WITH EMERGENCY SANDING EQUIPMENT

Some units are fitted with emergency sanding equipment which the Driver will operate when it is necessary to stop the train in emergency or conditions of very low railhead adhesion.

Each driving cab carries one application of sand, and once the equipment has been operated from that cab, the facility will not be available again until the containers have been replaced.

Driver's Actions

When the emergency sanding equipment has been used, the train must be brought to a stand and the Driver must inform the Signaller immediately and report the following:-

- That the emergency sanding equipment has been operated.
- The location where the equipment was discharged and the current location of the train.

If the signaller cannot be contacted immediately via the signal post telephone GSM-R radio, the Driver must place a track circuit operating clip on the line immediately in front of the train. To avoid delay, if the Driver alights to use a signal post telephone, a track circuit operating clip should be taken as well.

The Signaller may instruct the Driver to place a track circuit operating clip on the line immediately front of the train.

When the Signaller confirms that the train has been protected, the Driver must provide the following additional information:

- Why the equipment was operated i.e. whether for a genuine emergency, system fault or operated in error.
- The location of poor railhead adhesion (where applicable) which required the sander to be operated.
- The units and vehicle number on which the sander was operated.

When the train is ready to proceed, the Driver must obtain the Signaller's authorisation before moving the train. When a track circuit operating clip has been used, the Signaller's permission must be received before removing it from the line.

Signaller's Actions

On receipt of a report from a Driver that the emergency sanding equipment has been operated on a unit, the Signaller must immediately:-

- Place or maintain the signal in rear of the train at Danger.
- If the line on which the unit is standing is track circuited, confirm that the track circuit is showing occupied. Should the track circuit not be showing occupied and the signal in rear cannot be placed to Danger, instruct the Driver to apply a track circuit operating clip immediately in front of the train.
- Advise the Driver when the train is protected and record the information provided (on Bi-directional lines, protection must also be applied to prevent the approach of trains in both directions).

When it has been ascertained from the Driver that the train is able to proceed, movements may re-commence. Where applicable, the Signaller must instruct the Driver to remove the track circuit operating clip prior to the train proceeding. The next controlled signal in rear of where the sander was operated must be maintained at Danger behind the first train to proceed through the affected section, until the train has passed clear of the overlap of the signal in advance of where the train stopped and occupied the track circuit ahead. The passage of this first train must be observed to ensure that track circuits work correctly. This method of signalling shall continue until it has been ascertained that the track circuits are working correctly.

Where poor railhead adhesion problems have been reported, the Signaller must also observe Rule Book Module TW1, Section 28 "Rail-head adhesion".

The Signaller must inform Network Rail Territory Control giving details of the unit and vehicle numbers, train running details, time and location of the incident and ensure that all details are recorded (train register/occurrence book) and complete a failure to operate track circuit form if applicable.

London North Eastern Route GI - Dated: 07/05/16

WORKING OF CRANES ON BRIDGES

The permission of the Area Track Engineer must be obtained before a crane is allowed to work or is prepared for use while standing on a bridge, arch, viaduct or in a station platform.

Similarly, the Area Track Engineer representative must be consulted before a crane is taken into or worked in sidings to ensure that it will not foul permanent structures or traffic on adjoining lines and that curves, platforms and underbridges can be safely negotiated.

London North Eastern Route GI - Dated: 02/12/06

WORKING OF OFFICERS SPECIALS

Trains comprising of a locomotive and saloon only, run for Railway Officers, will not be accompanied by a Guard. Drivers and Trainmen when working such trains, must carry out the Rules and Regulations applicable to the Driver in charge of a light locomotive.

The Driver will be responsible for satisfying himself that the saloon is properly coupled to the locomotive, including the brake pipe, and for ensuring a satisfactory brake test is made from the saloon.

Trains conveying more than a single saloon must be accompanied by a Guard.

Subject to the instructions in Rule Book Module SP, Section 2 and any other permissible or temporary speed restrictions, officers' saloons may run at the speed stencilled on them when hauled. When propelled speed must not exceed 30 m.p.h.

London North Eastern Route GI - Dated:07/12/13

WORKING OF TRAFFIC ON A RECEPTION LINE/SIDING

When vehicles are to be placed on a Reception Line/Siding through a connection not operated from a signal box, the person-in-charge must first obtain permission from the Signaller, giving details of the movement involved. Should the movement be contrary to the direction in which trains normally enter the Reception Line/Siding the Signaller must be advised when the vehicles are stopped, and no further backward movement is to be made. In such circumstances the Signaller must not allow a train to enter the Reception Line/ Siding until he has received this advice.

A tail lamp showing a red light must be placed on the rearmost vehicle facing the direction from which trains normally enter the Reception Line/Siding. Where a Reception Line/Siding is normally worked in both directions a tail lamp must be placed at both ends of the vehicles.

London North Eastern Route GI - Dated: 02/12/06

WORKING OF TRAINS NOT FITTED THROUGHOUT WITH THE CONTINUOUS BRAKE

1. Trains not fitted throughout with the continuous brake may only run where specially authorised in Table B of the Sectional Appendix.
2. A Brake van, in which the Guard must ride, must be provided at the rear of the train.

The Guard must ensure that two side lamps are carried on the rearmost brakevan. During darkness, fog or falling snow or when passing through a tunnel, they must show a white light forward. The indication to the rear must be red except as follows:-

- a) trains in the reverse direction on a bidirectional double line must exhibit a white light on the side next to the other line and a red light on the opposite side.
- b) trains on a relief or slow line and trains on a goods line or loop adjacent to a main or fast line must exhibit a white light on the side next to the main or fast line and a red light on the opposite line.

The Guard must change the side light indication as necessary during the journey. The side lights must be removed when the train has passed into a reception siding.

The Guard must apply the hand brake as necessary to steady the train when travelling down a gradient and take care not to lock the wheels. He must also apply the hand brake as soon as he becomes aware that the Driver is applying the brakes unless instructions are issued to the contrary. If the Driver requires the Guard to apply the hand brake, he must give three short blasts on the horn and repeat this as necessary.

The Guard must apply the hand brake before leaving his brakevan.

3. Speed must not exceed 25 mph or such lower speed as may be laid down. The Driver must look back frequently, particularly when accelerating, to check that the whole train is following in order. If the train is stopped abruptly, the Driver must go back and ascertain whether any vehicle is lock buffered or derailed or the Guard is hurt.
4. The train must stop before descending any steep incline specified in the Working Timetable or loads tables and any other incline as required by the Driver. Unless the Driver is then satisfied that the load is small enough to ensure that the train can proceed without applying the wagon brakes; the Guard must apply the number of wagon brakes required by the Driver, these must be immediately behind the locomotive or fitted head. The train may then be restarted and drawn slowly on to the incline. If there are too few (too many) brakes applied, the Driver must stop immediately and give six blasts on the horn (given 3-3). He must then instruct the Guard to adjust the brakes accordingly. The Driver must carefully control the speed of the train down the incline and the guard must observe the speed. The locomotive and brakevan brakes must be kept in reserve and used only if necessary to stop the train. The train must stop at the foot of the incline to enable the brake to be released.

London North Eastern Route GI - Dated: 02/12/06

Explanation of Table A terms and symbols

LOR LN001	Seq. 001	Line of Route Description Explanation of Table A terms and symbols	Route London North Eastern	Last Updated 19/02/2022
-----------	----------	---	-------------------------------	----------------------------

Explanation of Table A terms and symbols

The "Running lines & speed restrictions" column (C) shows a NOT TO SCALE map of part of the national rail network. Station platforms, signal boxes, tunnels, level crossings and other infrastructure will be shown. Line names and their maximum permissible speeds will be shown (for the direction of normally signalled moves).

Unless indicated otherwise in column D, all information is shown with the **Down** direction being down the page, and the **Up** direction being up the page.

The "Location" column (A) will provide the name of locations such as stations, tunnels, etc, which will be shown in line with their associated symbol in column C.

The "Mileage" column (B), will provide the mileage of locations in miles and chains. Note: 1 chain = 22 yards = 20.11 metres, with 80 chains in 1 mile. Where a railway line is measured in kilometres only, then this will be made clear on the relevant diagrams, and the column may be renamed as 'Metreage'. Where running lines follow significantly different alignments, a second column B may be shown either immediately to the left or immediately to the right of column C.

The "Signalling & Remarks" column (D) will provide further details such as the type of signalling present on the lines shown, where signalling is controlled from, an explanation of any unusual abbreviations used in column C, and other details relevant to the area shown, such as electrification.

Across the top of the diagram, reading from left to right, are:

- the Line of Route (LOR) code
- the sequence (Seq.) number of the diagram within that LOR
- the LOR description
- the Engineers' Line Reference (ELR) applicable to that part of the railway (more than one ELR may be shown)
- the Network Rail Route that manages that part of the railway shown
- date when the diagram was last updated.

Contents

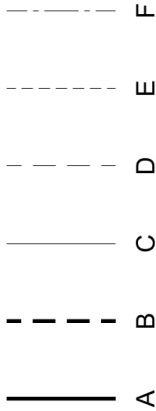

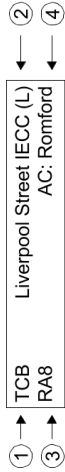

- Overview
- Running lines, loops, sidings and other tracks
- Signalling
- Speeds
- Stations
- Level crossings
- Communications
- Electrification
- Staff protection
- Train protection
- Other abbreviations
- Key to symbols

1. Overview

Each 'Table A' diagram shows all running lines and connections, with their maximum permissible speed shown. Where appropriate, tunnels, stations, level crossings, location names, mileages and other details may additionally be shown.

Each diagram has the following format:

LOR	Seq.	Line of Route Description	ELR	Route	Last Updated
		Mileage M Ch	Running lines & speed restrictions	Signalling & Remarks	
		Location			
		A	B	C	D

LOR	Seq.	Line of Route Description	Route	Last Updated
LN001	002	Explanation of Table A terms and symbols	London North Eastern	19/02/2022
<h2>Explanation of Table A terms and symbols - Continued</h2>				
<p>2. Running lines, loops, sidings and other tracks</p> <p>Lines are displayed as follows:</p>  <p>A: Line authorised to carry all types of train, including passenger trains. B: Line authorised to carry goods trains or empty coaching stock trains only. C: Line authorised to carry all types of train, including passenger trains, but part of another Line of Route. Details of which Table A diagram to refer to will be given. D: Line authorised to carry goods trains or empty coaching stock trains only, but part of another Line of Route. Details of which Table A diagram to refer to will be given. E: Track classed as a siding. F: Other running lines controlled or managed independently of the national rail network, and full details of those lines are not included in the Sectional Appendix (e.g. an adjacent London Underground Line, or metro/tram line).</p> <p>Each diagram will show the track layout in that particular geographic area, in terms of number of lines, crossovers, connections and so on. It will NOT show track curvature or indicate how wide a 6-foot or a 10-foot there may be between tracks (only in a few exceptional cases will the diagram give an indication of a larger than usual distance between running lines).</p> <p>The standages of loops and certain sidings will be given in metres and/or yards. These lengths do NOT take into account defensive driving policy or stand-back from signals. A suitable distance must be deducted from the lengths given to allow for this.</p>				
<p>3. Signalling</p> <p>The Signalling & Remarks column contains the following details at the top of each diagram, and then again whenever any of those details change:</p>  <p>① The mode of signalling applicable to that line. If the mode of signalling is different from one running line to the next (e.g. the Down Main line has track circuit block signalling, whilst the Up Main line has absolute block signalling), then this will be noted further down within the Signalling & Remarks column.</p> <p>② Signalling control location, type (e.g. signal box, power signal box, signalling centre) and signal prefix, shown in brackets. Where relevant, the controlling panel or workstation name will also be listed on a separate line.</p> <p>③ Where shown, the route availability number for the line or lines concerned. Where this detail is NOT shown, the details can be found in the Sectional Appendix Route Clearance tables.</p> <p>④ Where appropriate, the type of electrification and electrical control room responsible for that electrification (see "Electrification" section for further details).</p> <p>Where any of the above details change, it is assumed (unless stated otherwise) that the new details apply on both lines from that point onwards reading DOWN the diagram.</p>				

LOR	Seq.	Line of Route Description	Route	Last Updated
LN001	003	Explanation of Table A terms and symbols	London North Eastern	19/02/2022
<h3>Explanation of Table A terms and symbols - Continued</h3>				
<p>3. Signalling - Continued</p> <p>Mode of signalling The following abbreviations will be used in the Signalling & Remarks column to indicate the type of signalling that applies to the running lines shown on that diagram:</p> <p>AB: Absolute Block. C2: (See Western Route Sectional Appendix, General Instructions for details). CBTC: Communications-Based Train Control. ERTMS L2: European Rail Traffic Management System (Level 2). ET: Electric Token Block. ETCS Level 2: European Train Control System Level 2. ETCS Level 3: European Train Control System Level 3. NB: No Block. NST: No Signaller Token. NSTR: No Signaller Token with Remote Crossing Loops. OTS or OT(S): One Train Working where a Staff is provided. OTNS or OTN(S): One Train Working where a Staff is not provided. RETB: Radio Electronic Token Block (some diagrams will also include the channel number). TB: Tokenless Block. TB(SC): Scotland Route Tokenless Block. TCB: Track Circuit Block. TST: Train Staff & Ticket (details will be given in Local Instructions where applicable).</p> <p>In track circuit block areas of signalling, it is assumed that train detection is by means of track circuits. Where train detection is by means of axle counters, then this will be detailed in the Signalling & Remarks column.</p>				
<p>Direction of signalling The direction that main aspect signalling applies to, will be indicated by an arrow in the running line, pointing in the appropriate direction:</p> <p>A: Running line provided with main aspect signalling in one direction only. B: Running line provided with main aspect signalling in both directions, with no predominant direction of travel. C: Running line provided with main aspect signalling in both directions, with the predominant direction of travel indicated by a double arrow. D: Running line provided with main aspect signalling in both directions, but with simplified bi-directional signalling (i.e. fewer signals) in the direction indicated by the white, un-shaded arrow.</p> <p>It must be remembered that on running lines provided with main aspect signalling in one direction only, it will still be possible to have wrong direction moves in connection with position light signals (e.g. shunt moves) or at junctions. The presence of such shunt signals or signalled wrong direction moves are NOT indicated on Table A diagrams.</p> <p>Permissive Working Running lines on which permissive working is authorised will be detailed in the Signalling & Remarks column. The following abbreviations are used:</p> <p>PP: Permissive Working - full use for Class 1, 2, 3 ECS, 5, 9 and 0 trains. PP-A: Permissive Working - Attaching & Detaching use only for Class 1, 2, 3 ECS, 5, 9 and 0 trains. PP-S: Permissive Working - Platform Sharing use only for Class 1, 2, 3 ECS, 5, 9 and 0 trains. PP-C: Permissive Working - Contingency use only for Class 1, 2, 3 ECS, 5, 9 and 0 trains. PF: Permissive Working for Class 3 to 8 and 0 trains.</p>				

LOR	Seq.	Line of Route Description	Route	Last Updated
LN001	004	Explanation of Table A terms and symbols	London North Eastern	19/02/2022
<h2>Explanation of Table A terms and symbols - Continued</h2>				
<p>4. Speeds</p> <p>The maximum permissible speed for a section of line is shown on each running line in miles per hour (mph). Where permissible speeds are given in kilometres per hour, then this will be clearly indicated.</p> <p>It must be remembered that the maximum permissible speed of a train can be less than the maximum permissible speed of the line over which it travels (e.g. a Class 6 freight train can only run at speeds up to 60mph; Class 156 passenger train rolling stock can only run at speeds up to 75mph). Additionally, all temporary and emergency speed restrictions must be strictly observed, and speed regulated according to signal aspects received.</p> <p>Change of speed The location of a change in the maximum permissible speed is indicated by an asterisk. The mileage (or metreage) at which the speed change occurs will be shown in the mileage column, along with a further asterisk.</p> <p>Where another line or lines lead off from the running line (e.g. a loop or additional running line), the maximum permissible speed for that new line will be indicated in the connection and will remain until a change in speed is indicated as normal.</p> <p>Differential speeds Where a differential speed restriction applies, it is indicated as in the following examples:</p> <p style="margin-left: 40px;">40 60</p> <p style="margin-left: 40px;">Standard differential speed restriction - i.e. the faster speed applies to passenger, parcels and postal trains (loaded or empty) and light locomotives. The slower speed applies to all other trains.</p> <p style="margin-left: 40px;">20 SP or SF40 40</p> <p style="margin-left: 40px;">Non-standard differential speed restriction. This example indicates that Sprinter trains are permitted to travel up to 40mph, and all other trains up to 20mph.</p>				
<p>The abbreviations used in the non-standard differential speed restrictions are as follows:</p> <p>HST: High speed trains SP: Sprinter multiple unit trains CS: Class 67 locomotives</p> <p>MU: Multiple-unit trains DMU: Diesel multiple-unit trains EMU: Electric multiple-unit trains</p> <p>EPS: Enhanced permissible speed, applicable only to Class 390 and Class 221 trains capable of tilting</p> <p>Other differential speeds not listed above will be clearly detailed in the Signalling & Remarks column.</p> <p>Speeds on bi-directional or single lines On single and bi-directional lines where different speeds apply in each direction, the speeds are shown together with an arrow head indicating the direction in which they apply. Where possible, the arrow head for the Up direction will be to the left of the running line, and that for the Down direction to the right of the running line (this convention may not always be possible due to constraints on the diagram - e.g. the proximity of other details required to be shown).</p> <p>On single and bi-directional lines where the same speed applies in both directions, no arrows are shown.</p> <p>On single and bi-directional lines, an asterisk may indicate a change of speed in one direction only.</p> <p>Un-signed speeds Unless indicated otherwise, the maximum speed over connections to sidings, depots and yards is 15mph and the maximum speed within sidings, depots and yards is 5mph.</p> <p>In the Scotland Route Sectional Appendix, in accordance with previous signing practices, some speeds may not be indicated on the lineside by a speed sign. Such speeds are therefore prefixed by a small, angled dash to denote that lineside signs may not be provided.</p>				

LOR	Seq.	Line of Route Description	Route	Last Updated
LN001	005	Explanation of Table A terms and symbols	London North Eastern	19/02/2022
<h2>Explanation of Table A terms and symbols - Continued</h2>				
<p>5. Stations</p> <p>Station names are shown in CAPITALS in the Location column. The mileage of a station is traditionally where access between platforms was originally provided - e.g. behind the buffer stops at terminal stations, or where the original station footbridge was located. The mileage of a station may therefore not reflect the centre of a station, should platforms have undergone extension at one end, or the station been remodelled.</p> <p>Some stations may not be shown with a specific mileage (or metreage) but will instead show 'start' and 'end' figures to indicate the extents of the station.</p> <p>The operational length of each station platform is given in metres and / or yards. These lengths do NOT take into consideration defensive driving policy or stand-back from signal. A suitable distance must be deducted from the lengths given to allow for this. Where platform lengths are not given, please refer to the relevant table in the General Instructions section of the Sectional Appendix.</p>				
<p>6. Level Crossings</p> <p>Level crossings are indicated by the letters LC and then one, or more, of the abbreviations below, following the name of the crossing:</p> <p>Crossings operated by a signaller or crossing keeper:</p> <p>CCTV: Manual level crossing (full barriers), remotely supervised via closed circuit television. MCB: Manned level crossing (full barriers), operated locally by a signaller or crossing keeper. MCG: Manned level crossing (gates), operated locally by a signaller or crossing keeper. OD: Manual level crossing (full barriers), normally automatically operated with obstacle detection. RC: Manual level crossing (full barriers), remotely controlled.</p>				
<p>Automatic crossings:</p> <p>ABCL: Automatic barrier crossing - road warning lights and barriers monitored by train crew. AHBC: Automatic half-barrier crossing - monitored by signaller. AOCL: Automatic open crossing - road warning lights monitored by train crew. The rules applicable to ABCL level crossings also apply to this type of crossing. R/G: Miniature red/green warning lights (including miniature stop lights (MSL)).</p> <p>The letter "X" shown after the above abbreviations for level crossing types (e.g. AHBC-X) indicates that the crossing concerned also works automatically for movements in the wrong direction.</p> <p>Other crossings:</p> <p>BW: Bridleway crossing. FP: Footpath crossing. OPEN: Open crossing without road warning lights. SBC: Station Barrow Crossing. TMO: Train crew operated. Ul: Accommodation / occupation or footpath level crossing equipped with User Information equipment. UWC: User worked crossing.</p>

Explanation of Table A terms and symbols - Continued

7. Communications

A:  GSM-R

B: 

The main form of communication between drivers, guards, other on-train staff, signallers, operations controllers and ECR's, is GSM-R. A railway line provided with GSM-R will be denoted by symbol **A** at the top of the Signalling & Remarks column. Where GSM-R provision ends, then this will be detailed in the Signalling & Remarks column at the appropriate place.

Should GSM-R not be available, then line-side telephones, denoted by symbol **B** above, can be used to contact the signaller in an emergency. Telephones are provided at the following locations:

- at the majority of signals capable of displaying a stop 'Danger' aspect. These telephones are NOT indicated on Table A diagrams.
- at the majority of points forming crossovers and junctions. These telephones are NOT indicated on Table A diagrams.
- at Ground Frames and Ground Switch Panels. These telephones are NOT indicated on Table A diagrams.
- at lockout devices. These telephones are NOT indicated on Table A diagrams.
- at certain level crossings. Level crossings provided with telephones will have symbol **B** shown at the left-hand side of the "Running lines & speed restrictions" column, though on site telephones will be provided on both sides of the railway.
- at certain other locations. These locations will be shown by symbol **B** and their mileage given in the Mileage column (or metrage column, where applicable).

8. Electrification

Where lines are electrified, the type of electrification and the electrical control room (ECR) responsible for the area, will be shown at the top of each page in the Signalling & Remarks column.

The following abbreviations will be used:

AC: lines electrified with overhead line equipment energised with 25kV alternating current.
 DC: lines electrified with a third rail energised at 750V direct current.
 DC(OLE): lines electrified with overhead line equipment energised with 650/750V direct current.

Adjacent lines that are electrified (e.g. Metro tram lines or London Underground lines) will have their types of electrification noted in the Signalling & Remarks column.

AC overhead line neutral sections are indicated by the letters OHNS and their mileage given in the Mileage column (or metrage, where applicable).

Automatic Power Change Over locations will be shown, for both pantograph raise and pantograph lower locations. Details, including whether the change over is static or dynamic, raise or lower, will also be provided.

LN001	007	Explanation of Table A terms and symbols	London North Eastern	19/02/2022
<h2>Explanation of Table A terms and symbols - Continued</h2>				
<p>9. Staff protection</p> <p>The Signalling & Remarks column will provide details of Automatic Staff Warning Systems using one of the following abbreviations: FWS - Fixed Warning System. TOWS - Train Operated Warning System</p> <p>The "Signalling & Remarks" column will provide details of lockout devices (LOD) and the lines that they cover. The different types of lockout are as follows: LOD(E): this type of lockout prevents train movements from being made in both directions, either into or out of the protected area, and is a captive key system where the key is normally retained in the lockout device. LOD(K): this type of lockout prevents trains from entering the protected area in both directions, but does not prevent train moves within the area or going out of the area. This is a captive key system where the key is normally retained in the lockout device. LOD(P): this type of lockout prevents signalled train movements from being made in the 'wrong' direction, where the line has been signalled for bi-directional working. This is a key enabled system where the authorised user must obtain the key before operation can commence. LOD(T): this type of lockout prevents all signalled moves into the area from being made, but not moves within, or going out of, the protected area. It also prevents moves from being made to signals where the overlap of the route set would be in the protected area. This is a key enabled system where the authorised user must obtain the key before operation can commence.</p> <p>Full details of the protection afforded is as defined in the lineside case.</p>				
<p>10. Train protection</p> <p>Unless otherwise stated in the Signalling & Remarks column, it is assumed that AWS (Automatic Warning System) and TPWS (Train Protection Warning System) is provided on all running lines. Additionally, it is assumed that TPWS is provided at all main aspect signals at the exits from sidings, where the signal controls moves out onto a main running line.</p> <p>The provision of TASS (Tilt Authorisation & Speed Supervision system) and ATP (Automatic Train Protection) will be detailed in the Signalling & Remarks column.</p>

KINGS CROSS To HITCHIN

Rule Book Module S4 - Detention of Trains on Running Lines

Drivers of trains stopped at signals on the London side of Hitchin and between Wood Green North Jn and Langley Jn via Hertford must :-

1. **At Automatic and Semi Automatic Stop Signals-** After waiting one minute, communicate with the Signaller. If the Signaller instructs the Driver to wait at the signal and the signal does not show a proceed aspect within three minutes, the Driver must again communicate with the Signaller to obtain further instruction. The Rule Book Module S4 is modified accordingly.
2. **At Controlled Stop Signals-** After communicating with the Signaller in accordance with the Rule Book Module S4, communicate with the Signaller at intervals of not more than three minutes until the signal clears or, if the signal is defective or cannot be cleared, until the Signaller instructs the Driver to pass the signal at Danger.

Dated: 02/12/06

LN101 - KINGS CROSS TO SHAFTHOLME JN

KINGS CROSS STATION PLATFORM 0

Prohibition of Diesel & Steam Services Entering Platform 0

Diesel and steam services are prohibited from entering platform 0 due to the low roof except in the following circumstances:

- Under an emergency to upload passengers
- Train rescue diesel locomotive – engine to be kept running for maximum of 5 minutes while in the exclusion zone.
- Authorised move by the signal box

“DIESEL TRAINS NO ACCESS INTO PLATFORM 0” Boards are provided on Line A and Line B on the approach to Gasworks Tunnel.

Dated: 26/04/2021

LN101 - KINGS CROSS TO SHAFTHOLME JN**KINGS CROSS**

Kings Cross Station - To enable stock to be positioned correctly for watering purposes, Drivers of Class 253, 254 trains and trains of Mark 4 coaches must bring their train to a stand with the front of the leading vehicle in line with the relevant black/yellow marker board located at the buffer stop end of platforms 1 to 8.

Dated: 07/06/2021

LN101 - KINGS CROSS TO SHAFTHOLME JN**HARRINGAY**

Shunting towards EMU Depot. All EMU's shunting towards the stop boards on the Depot inwards and Outwards Roads from the Up Slow 2, Up Slow 1 and Up Reversing Siding must be driven from the leading end.

Dated: 27/08/13

LN101 - KINGS CROSS TO SHAFTHOLME JN**Ferme Park Sidings To Wood Green South Jn****Down carriage line between ferme park reception sidings and wood green : train servicing**

1. Wrong direction movements must not be made along the Down Carriage line from Wood Green to Ferme Park Reception Sidings without the authority of the person in charge at Ferme Park Reception Sidings.
2. Before a train departs along the Carriage line from Ferme Park Reception Sidings, traincrew must ensure all windows and doors are fully closed. Inwards opening doors must be locked.
3. Should the "WAIT/PROCEED" indicator fail to display an indication, the train must not proceed until authorised by the person in charge.
4. Automatic Washing Plant
Drivers of all trains except EMU's must stop and press the plunger provided, before proceeding to the washing plant.
5. When trains are worked through the washing plant, speed must not exceed 3 m.p.h. until the last vehicle is clear of the equipment.
6. Toilet Discharge Plant
When train toilet retention tanks are to be discharged, only one other vehicle may be formed between the locomotive and the leading vehicle for discharge.
7. When receiving a train for discharge, the person in charge must, after authorising it to approach the discharge area, hand signal the train into position as required.
8. No train must be moved without the authority of the person in charge.
9. The protection arrangements as shown in the Rule Book Module T10 do not apply to staff operating the extraction pump, but should a failure occur preventing protection by the interlocking provided, protection by red lamp/flag as prescribed must be provided.
10. Before discharge operations commence, the person in charge must ensure the appropriate hoses are properly connected.
11. When discharge operations are completed, the person in charge must ensure all hoses, after disconnection, are stowed clear of the line and then sound the staff warning siren in readiness for the train to depart.
12. Toilet Flushing Apron
When a train is being serviced over the flushing apron, the person in charge must, after authorising the train to approach, hand signal it into the position required.
13. Departures
The person in charge must, when a train is ready to depart from the Carriage line, advise the Signaller of the train details.

Dated: 02/12/06

LN101 - KINGS CROSS TO SHAFTHOLME JN

Hornsey EMU Depot

A Depot Protection System for the protection of staff exists comprising position light signals with associated derailleurs at the approaches to Depot Roads 15 (Wheel Lathe) and 18 to 24, together with additional red lights located as follows:-

15 Road and 24 Road: mounted on a pole at cab window level at the south end of each line;
 18 to 23 Roads: 2 at each buffer stop and 2 on the lefthand side of the shed door for each line,
 at cab height level.

The aspects displayed by the position light signals comply with the Handbook RS/521, Section 2.6.

Provided the appropriate position light signal is displaying a proceed aspect movements may be made at normal Depot speed. It is the responsibility of the traincrew to ensure where applicable that the shed doors are open. Once a movement has come to a stand and has been secured it will be the responsibility of the Senior Operating Supervisor or Senior Maintenance Supervisor to activate the Depot Protection System.

When the appropriate position light signal is at Danger the Depot Protection System is activated on that line and no movement may be made past the signal until a proceed aspect is displayed.

Failure To Obey The Position Light Signal(s) Will Result In Derailment

During the time that the additional red light are illuminated the system is activated and no movements may be made.

Vehicles may be moved when instructed by the Shunter in Charge once the red lights for that line have been extinguished. In the event of any failure of the Depot Protection System movements to and/or from Roads 15 to 24 must only be made under direct instructions from the Operating Supervisor.

Dated: 07/12/13

Once a movement has come to a stand and has been secured it will be the responsibility of the Senior Operating Supervisor or Senior Maintenance Supervisor to activate the Depot Protection System.

When the appropriate position light signal is at Danger the Depot Protection System is activated on that line and no movement may be made past the signal until a proceed aspect is displayed.

Failure To Obey The Position Light Signal(s) Will Result In Derailment

During the time that the additional red light are illuminated the system is activated and no movements may be made.

Vehicles may be moved when instructed by the Shunter in Charge once the red lights for that line have been extinguished. In the event of any failure of the Depot Protection System movements to and/or from Roads 15 to 24 must only be made under direct instructions from the Operating Supervisor.

LN101 - KINGS CROSS TO SHAFTHOLME JN**New England North To Stoke Tunnel****Flashing green signal aspects for special test runs**

In connection with special test runs the following arrangements will apply :-

1. Use of Flashing Green Main Signal Aspects

1.1 Flashing Green aspects (in addition to steady green aspects) have been provided on the:-

- a) Down Fast line between Signal P487 (north of New England North) and P615 (approaching Stoke).
- b) Up Fast line between Signal P610 (South of Stoke) and Signal P494 (south of Werrington Jn).

The meaning of a flashing green aspect is next signal exhibiting a steady or flashing green aspect. The AWS will give a bell for both flashing and steady green aspects.

1.2 Drivers of all trains except test trains which are authorised to exceed 125 m.p.h., must treat flashing green aspects the same as steady green aspects.

1.3 Drivers of test trains authorised to exceed 125 m.p.h., must treat:-

- a) a flashing green aspect as authority to exceed 125 m.p.h.
- b) a steady green aspect as authority to proceed at or a requirement to reduce speed to 125 m.p.h.

2. Staff Safety

A special notice to staff will be issued when trains are authorised to exceed 125 m.p.h.

Dated: 02/12/06

LN120 - WOOD GREEN NORTH JN. TO LANGLEY JN VIA HERTFORD

HERTFORD NORTH To Langley Junction (ENIF Test Track)

The European Train Control System (ETCS) is the name used to describe a new signalling, control and train protection system. It is a component of the European Rail Traffic Management System (ERTMS). In order to de-risk the national implementation of ERTMS a test facility has been provided to test signalling suppliers' equipment. This will be known as the ETCS National Integration Facility (ENIF) and consists of:

- A testing laboratory situated at Hitchin.
- A test site between Molewood Junction and Bragbury Junction on the Down Hertford loop line.
- A test train which is a converted 313 EMU specially fitted with ETCS equipment.

These instructions apply to operations on and around the ENIF test track. Except where stated below, there is no change to method of operation outlined in the national rules and procedures.

Overview of ENIF Test Track

The operations for the ENIF Test Track are built upon the signalling changes which are set out in the 'Supplementary Notice of Signalling and Permanent Way Alterations' (yellow signalling notice) NR/LNE No. 29.

The route between Molewood Junction and Bragbury Junction is signalled for the 'Down direction' on the Down Line. The Up Line is signalled for bi-directional working. During the time the ENIF Test Track is in use all service traffic will travel on the Up Line in both directions. The ENIF Test Train is a class 313 EMU painted in the Network Rail yellow departmental train livery. When the test site is in place this train will travel in either direction between the 'Test Train Stop Boards' on the Down Hertford Line. The train headlights and red tail lights will be displayed according to the direction that the Test Train is travelling.

Until further notice staff should treat the Down Hertford Line between Molewood Junction and Bragbury Junction as bi-directional **at all times**.

Red zone working is banned on the Down Hertford Line between WL1950 signal (near Molewood Junction) and the 'Test Train Limit Board' WL2201 (near Bragbury Junction) **at all times**.

Service trains passing over the Hertford Loop Lines

Service trains travelling on the Down Hertford Line should ignore the 'Test Train Limit Boards'. They are used as part of the ETCS test train operations and indicate the limits of the test site to the ENIF Test Train. They are not part of normal train operations.

There are two 'Test Train Limits Boards'.

- WL2201 (25.1230 / 25m 55ch) on the approach to WL1965 signal near Bragbury Junction.
- WL2290 (21.1431 / 21m 65ch) ahead of Molewood Junction on the Down Hertford Line but would only be encountered by a train travelling on a wrong-direction move.

The 'Test Train Limit Boards' are a blue background with the words 'Test Train' in white letters with a white square containing a red St Andrews cross.

During the time when the Test Track is in use the control of the portion of track between Molewood Junction and Bragbury Junction will be transferred from Kings Cross PSB to ENIF Control at Hitchin, who will signal the Test Train in both direction using ERTMS movement authorities on the Down Line. Drivers of service trains in either direction on the Up Hertford line should expect at times to see the ENIF train travelling in either direction on the Down Hertford Line. They may also witness unusual sequence of signal aspects on the Down Hertford Line.

Reporting of trespassers, unusual occurrences and emergencies

There is no change to the procedures for reporting of trespassers, unusual occurrences and emergencies on the Down Hertford Line. All calls should go through the signaller at Kings Cross PSB.

When a line blockage is required within the ENIF test site area

If a line blockage is required at the time when the ENIF test site is in use the Test Train must be moved to a position where it will not affect the work or the signals used for protection. The test site must be given back to the signaller at Kings Cross PSB before the arrangements for setting up the line blockage are implemented.

LN170 - WERRINGTON JN. TO FLYOVER EAST JN. VIA LINCOLN LINCOLN CENTRAL

Stabling of Empty Multiple Units in Platforms 3,4,5 at Lincoln Central Station.

Empty Diesel Multiple Unit may be stabled unattended on platforms 3,4, or 5 at Lincoln Central Station subject to the following criteria.

When it is required to stable an empty Diesel Multiple Unit, which is to occupy platforms 3,4, or 5, the Signaller at Lincoln Signalling Centre, in conjunction with the Person in Charge at Lincoln Central Station must ensure that:-

- There is sufficient room to accommodate the Unit.

Before the Unit is left unattended, the Person in Charge at Lincoln Central Station must confirm to the Signaller at Lincoln Signalling Centre that:-

- All unsupervised driving cab doors have been locked.
- A portable flashing tail lamp is displayed at each end of the stabled Unit.

When it is necessary to allow a subsequent empty Diesel Multiple Unit, that requires to stable, to enter any already occupied platform line, whether to stable separately or to couple to another empty Diesel Multiple Unit, the Signaller at Lincoln Signalling Centre, in conjunction with the Person in Charge at Lincoln Central Station must ensure that:-

- There is sufficient room to accommodate the Unit.

Before the empty Diesel Multiple Unit is left unattended, the Person in Charge at Lincoln Central Station must confirm to the Signaller at Lincoln Signalling Centre that:-

- All unsupervised driving cab doors have been locked.
- A portable flashing tail lamp is displayed at each end of each of the stabled Unit/s.

When it is required to remove a Unit that has been stabled, the Person in Charge at Lincoln Central Station must advise the signaller at Lincoln Signalling Centre accordingly.

When the Unit has departed, the Person in Charge at Lincoln Central Station must confirm to the Signaller at Lincoln Signalling Centre:-

- All unsupervised driving cab doors have been locked on any remaining Units.
- A portable flashing tail lamp is displayed at each end of each of any remaining stabled Units.

When the last remaining Unit/s are to cease being stabled, the Person in Charge at Lincoln Central Station must:-

- Advise the signaller at Lincoln Signalling Centre that stabling on the platform line has ceased, and that normal working may be resumed.

In exceptional circumstances, or when the Lincoln Central Station is unstaffed, drivers can carry out the duties of the Person in Charge in this instruction.

York ROC		188 10 * 188 15 188 19 * 188 21 *	<p>The diagram illustrates the York ROC (Rail Operating Centre) and its connections. It shows four main running lines: UM (Up Main), DM (Down Main), UL (Up Leeds), and DL (Down Leeds). Speed restrictions are indicated by numbers in boxes: 40 mph for UM and DM, 30 mph for UL and DL. The diagram also shows various sidings and platforms: Exam Sidings (ES), Up Scarborough (USC), Down Scarborough (DSC), York Loco Line (YL), York Loco No1 siding (YS1), and York Loco No2 siding (YS2). Platforms 1 through 11 are shown with their respective sidings. The diagram is divided into the Network Rail Eastern Region and York Depot and Railway Museum private sidings.</p>		<p>TCB RA9</p> <p>York ROC (Y) York South workstation AC:York ECR</p> <p>GSM-R</p> <p>UL = Up Leeds DL = Down Leeds YS1 = York Loco No1 siding YS2 = York Loco No2 siding</p> <p>RA9 York Platform 2 and maintenance sidings: RA3 York Platform 4 and connecting line to LN880: RA8 York Platform 5 and connecting line to LN880: RA8</p> <p>-Permissive Platform Sharing (PP-S) for train class 0,1,2,3 (ECS) 5 and 9 is authorised in platforms 1,2,6,7 and 8 Platform permissive working for booked attaching-/detaching only (PP-A) for a train class 0,1,2,3,(ECS) 5 and 9 is authorised in all platforms. Platform Permissive working as a contingency arrangement during service disruption only (PP-C) is authorised for train class 1,2,3 (ECS) 5 and 9 in platforms 3,4,5,9,10 and 11 Platform Stabling for train class 0,1,2,3 (ECS) and 5 is authorised in platforms 1,2,6,7 and 8 Platform Stabling for train class 1,2,3 (ECS) and 5 is authorised in platforms 9, 10 and 11 Platform Stabling for train class 1,2,3 (ECS) and 5 is authorised in platforms 3,4 and 5 for the purpose of supporting cyclical maintenance strategy at York station</p> <p>ES = Exam Sidings DSC = Down Scarborough USC = Up Scarborough</p> <p>RA9</p> <p>YL = York Loco Line</p> <p>York ROC (Y) York North workstation</p>

LN600 - SHAFTHOLME JN. TO RESTON GSP**Siemens Depot**

Drivers of inbound trains to the Depot must stop at the stop and telephone board on the York Loco line and contact the Siemens Depot controller for permission to proceed.

The person in charge of train despatch at York station must advise the signaller at York ROC, York North Workstation when a train composed of more than 3 vehicles requires access to the Depot. The signaller at York must obtain an assurance from the Siemens Depot controller that the train can be dealt with before clearing the platform signal.

Drivers of outbound trains must stop at the exit stop and telephone board and contact the Siemens Depot controller for permission to proceed. The controller must obtain permission from the signaller at York ROC, York North Workstation before authorising the train to proceed towards Y300 signal.

Drivers of trains from the National Railway Museum must stop at the stop and telephone board on the NRM line and contact the Siemens Depot controller for permission to proceed into the Depot. Once inside the Depot drivers must proceed beyond the outgoing stop board on the Depot line, clearing Depot point 2, and must then follow the procedure for outbound trains.

Dated: 27/12/18**LN600 - SHAFTHOLME JN. TO RESTON GSP****YORK To NEWCASTLE****Movement of empty Class 14X/15X units between York and Newcastle**

When it is necessary to move units between York and Newcastle or vice versa for operating purposes by attaching to passenger services which call at either Chester-le-Street or Thirsk such units must be locked out of public use.

Dated: 02/12/06**LN600 - SHAFTHOLME JN. TO RESTON GSP****NORTHALLERTON To Tweedmouth Crossover****Working of trains in the "Wrong Direction" through simplified bi-directionally signalled sections of line.**

Trains must only be signalled in the "Wrong Direction" over the simplified bi-directional sections during:-

- a) planned engineering work on the adjoining line or
- b) in an emergency when a line is blocked due to a failed train, broken rail etc.
- c) to allow other trains to pass the Loram C21 Rail Grinding train when grinding. In these circumstances the train must be treated as a train stopping in section.

Dated: 02/12/06**LN600 - SHAFTHOLME JN. TO RESTON GSP****NORTHALLERTON****Set-back movements Reversing line to Down Main**

The illumination of the "Off" indicator associated with Signal Y496 will be the Driver's authority to proceed and it will not be necessary for the Driver to comply with the 'Rule Book Module SS2, Section 4.2)', but the Driver must proceed cautiously, keeping a lookout and being prepared to act on handsignals.

Movements in connection with detaching vehicles with hot axle boxes to Up Sidings

If it is necessary for a vehicle with hot axle box to be detached from a train on the Up Main line at Northallerton, the Driver will be instructed to proceed from signal 498 and stop his train immediately on the Darlington side of signal 695 (by observing the back light).

After the vehicle has been stabled and signal 693 has been cleared for the front portion of the train to set back to the rear portion, the Driver is authorised, without further authority, to proceed to signal 474 at Northallerton Station.

Dated: 27/12/18

LN600 - SHAFTHOLME JN. TO RESTON GSP DARLINGTON

Train crew requiring access to/from the Darlington Station Loop at Darlington station

Train crew requiring access to/from the Darlington Station Loop at Darlington station must adopt the following procedure:

Access to the Up/Down Station Loop

Access from platform 1 to the Up/Down Station Loop will require the Signaller (at Tyneside IECC Darlington Workstation) to be contacted from T900 signal and a request made for train movements to be stopped on both platform No1 line and the Darlington Station Loop. The Signaller will comply with Rule Book Module TS1 Regulation 13 and when in a position to do so he/she will advise the caller that train movements have been stopped and that it is safe to cross.

After the caller has crossed both lines he/she must contact the Signaller from T898 signal and confirm that he/she is now clear and that normal running of trains may resume.

Access from Darlington Station Loop

Access from the Darlington Station Loop to platform 1 will require the Signaller to be contacted from T898 signal and a request made for train movements to be stopped on both the Darlington Station Loop and platform No1 line. The Signaller will comply with Rule Book Module TS1 Regulation 13 and when in a position to do so he/she will advise the caller that train movements have been stopped and that it is safe to cross.

After the caller has crossed both lines he/she must contact the Signaller from T900 signal and confirm that he/she is now clear and that normal running of trains may resume.

Dated: 27/12/2021

LN600 - SHAFTHOLME JN. TO RESTON GSP Darlington Up Siding

A train to be run round must be routed into Siding 2 and the locomotive returned through Siding 1.

Siding 3 must be used for stabling purposes only.

Siding 4 is out of use until further notice

When a train for the Down direction is ready to depart, the Person in charge of the movement must request permission from the Signaller for it to be propelled to the approach side of Signal 911.

Dated: 02/12/06

LN600 - SHAFTHOLME JN. TO RESTON GSP Birtley Jn

Sanding Signs

A Marker Board is provided before reaching signal T178 and Drivers of south departing trains from Tyne Yard must bring their trains to a halt at this board when signal T178 is at danger and wait at this location for the signal to clear.

Boards instructing Drivers when not to deposit sand and when to, have been provided in the vicinity of Birtley Junction.

These arrangements have been implemented to overcome the problems with locomotives depositing sand in the point mechanisms.

Dated: 02/12/06

LN600 - SHAFTHOLME JN. TO RESTON GSP NEWCASTLE

Drivers of UP HST's booked to call at platform 7 and 8 must bring their trains to a stand at signal 486.

No train, except one composed of a single Class 153 car, may arrive in Platform 8 for passenger purposes from the West End. If the Driver of any other type of unit is routed towards Platform 8 to call at that platform for passenger purposes he must stop at T481/483/487 signal as appropriate and advise the Signaller that his train is too long to fit in the platform.

The Guard of any train the doors of which are not completely on the Platform must not release the doors until arrangements have been made to have the train completely platformed.

Train crew requiring access to/from the Provincial Sidings at Newcastle Station

Train crew requiring access to/from the Provincial Sidings at Newcastle station must adopt the following procedure:

Access to Provincial Sidings

Access from platform 8 to the provincial sidings will require the Signaller (at Tyneside ROC Newcastle Workstation) to be contacted from T486 signal and a request made for train movements to be stopped on the Provincial Sidings, the Up/Down Slow line and Platform No 8 line. The Signaller must comply with Rule Book Module TS1 Regulation 13 and when in a position to do so he/she will advise the caller that train movements have been stopped and that it is safe to cross.

After the caller has crossed all lines he/she must contact the Signaller from the telephone positioned at the buffer stops and confirm that he/she is now clear and that normal running of trains may resume.

Access from Provincial Sidings

Access from the provincial sidings to platform 8 will require the Signaller to be contacted from the telephone positioned at the buffer stops and a request made for movements to be stopped on the provincial sidings, the up/down slow line and platform No 8 line. The signaller will comply with Rule Book Module TS1 Regulation 13 and when in a position to do so he/she will advise the caller that train movements have been stopped and that it is safe to cross.

After the caller has crossed all lines he/she must ring the Signaller from T486 signal and confirm that he/she is now clear and that normal running of trains may resume.

Dated: 27/12/2021

LN600 - SHAFTHOLME JN. TO RESTON GSP LNER TRAINS

NEWCASTLE PLATFORM 5/6 & 7/8 ASDO & APCO RESTRICTIONS

Drivers of any class 80x trains must not accept the route into platforms 5/6 or 7/8 unless prior authorisation has been given. If the route is cleared into one of these platforms and no such authorisation has been received the train must be brought to a stand and the signaller contacted.

A class 80x train longer than a 5 car formation must not be planned into platforms 5/6 or 7/8 without first informing the Tyneside ROC, Newcastle workstation signaller. Formations longer than 5 cars will require manual selection of individual doors due to short platform lengths.

Due to non-provision of APCO control any unplanned class 80x services being signalled towards an unwired route from platforms 5/6 or 7/8 will require the driver to confirm to the signaller that Diesel traction has been selected before the controlling signal is cleared.

Unwired routes include Hexham (NEC1), Sunderland (LEN3) or Forth Bank sidings. (NEN1)

Dated: 16/03/2024

LN600 - SHAFTHOLME JN. TO RESTON GSP

Heaton Depot

1. Movements Onto Shed Roads

1.1 At the Stopboard/warning light in advance of the shed entrance the Driver must bring his train to a stand. The Shunter must ensure that the derailer, where fitted, is clear of the line, before giving the Driver permission to proceed. The driver must ensure that the associated white light is illuminated and sound the horn before proceeding

1.2 The movement proceeding towards the shed will operate a treadle switch which causes a continuous bell to sound accompanied by a flashing white light over the road on which the movement is taking place. The Driver must sound the horn before entering the shed.

1.3 In the event of failure of the white light, which authorises a movement to commence the defect should be reported to the Team Leader, Production who will investigate the fault and arrange repairs. During any repair period the emergency depot procedure must be instigated to allow movements to continue.

2. Movements out of Sheds

2.1 Before a train or vehicle is moved, the shunter in charge shall ensure that the protection has been removed by observing that the red warning and red overhead lights are out and where fitted derailleurs are clear of the line.

2.2 Before starting a move inside or to move out of the shed, the shunter, after removing scotches and releasing hand brakes where necessary, and after ensuring that it is safe to move, must first operate the manual push button to initiate the bell and visual warning. Before departing out of the shed the driver must, upon receiving the Shunter's authority to proceed, ensure that the associated white light is illuminated and sound the horn before proceeding.

2.3 In the event of failure of the white light, which authorises a movement to commence the defect should be reported to the Team Leader Production who will investigate the fault and arrange repairs. During any repair period the emergency depot procedure must be instigated to allow movements to continue.

NB Action if Warning Bell and/or White Lights Cease to Operate

If the warning bell/white lights stop before the movement is completed, the train must be brought to a stand and movement must not start again until the manual push button has been operated which reactivates the warning system.

3. Movements within the Yard

3.1 Arrivals from Newcastle

A locomotive, after being detached from a train in the reception roads, must draw forward to the "STOP AND TELEPHONE" board where the Driver must obtain instructions from the shunter.

Trains or light locomotives entering Heaton Depot via CT.19 or CT.13 signals must be held at those signals until the shunter has joined such train or locomotive and a clear understanding reached between the Control Tower and the shunter as to the extent of the movement before the appropriate signal is cleared. The shunter must remain with the train or locomotive throughout the movement and inform the Control Tower when the movement is complete.

3.2 Arrivals from the North End (Benton)

Assurance must be given to the Control Tower by the shunter that all necessary hand points have been set for a train arriving via the North End of the Depot before clearance is given for such movement. The train must be accompanied by the shunter from 3107 points leading from the Up Main Line.

3.3 When a train is ready to depart the Driver or Shunter must advise the Control Tower. When the "Train Ready" indicator becomes illuminated the train may proceed to the next signal.

When the train is ready to depart the Guard must advise the control Tower. When the "Train Ready" indicator becomes illuminated the train may proceed to the next signal.

3.4 Departures via the North End (Benton)

All Trains departing from Heaton via the North End via T609 must be accompanied by a shunter as far as Signals CT3, CT5, CT7 and CT9.

3.5 Heaton South Junction

Movements from the primary departure sidings to the reception roads at the Heaton South Junction end of the Yard must only be made when routed via signals T594 and T572

3.6 Movements on the Depot

No movement may exceed the following speeds:-

- a) 5mph
- b) 3mph through the washing plant

London North Eastern Route Sectional Appendix Module LN3

The shunter in charge of any movement on the Depot must ensure that the train or vehicles are safe to move. The Driver must not pass any "STOP AWAIT INSTRUCTIONS" board without the authority of the Designated Shunter responsible for protection.

3.7 Turning of Vehicles on the Turntable

Turning of vehicles on the turntable shall be performed by no less than two shunters. The yard chargeman or Team Leader Production also must be present when possible. Extreme care must be taken due to close proximity of overhead line stanchions.

3.8 Secondary Departure Roads No's 5 and 6

Due to the curvature in No's. 5 and 6 secondary departure sidings Class 158, MK.3 and MK.4 coaches must not be placed in these roads.

3.9 Stabling of MK.3 and MK.4 vehicles and Power Cars

HST power cars, MK.3 and MK.4 vehicles may only be stabled provided that a gap of at least 5 yards (5 metres) is left between the buffer stops and/or adjacent vehicles.

4. Emergency Depot Protection

If the Depot Protection System fails and Emergency Depot Protection is initiated, all Drivers must be informed personally by the Team Leader Production, that the Emergency Depot Protection Arrangements are in use and they will receive instructions from the shunter. Extra care and vigilance must be exercised by all concerned.

5. Local Isolations and Blocking of Roads on the Depot to Electric Traction During a Local Isolation

The production co-ordinator will personally inform all Driver's when any roads are isolated/blocked to electric traction and, similarly, will inform all Driver's when any such restrictions are lifted.

Dated: 27/07/24

LN600 - SHAFTHOLME JN. TO RESTON GSP MORPETH

Trains calling at Morpeth which cannot be fully platformed when bi-directional working is in operation

Should a Down train be stopped at Signal 113 or an Up train at Signal 128/126 and the Signaller advises the Driver the train is to be routed through the facing crossover and proceed from Morpeth on the opposite line under bi-directional working, resulting in the train not being completely platformed, the Driver must immediately advise the Guard who must make an appropriate announcement to passengers.

If the train consists of Mark 4 stock, the Guard must only permit passengers to alight and join at one locally-controlled door. If a Down train consists of HST stock, the Guard must announce that passengers to alight must only do so from the coaches they nominate.

Drivers of Up trains routed through the facing crossover must bring their trains to a stand with the leading end at the special marker board located beyond the platform end.

An 'S' car marker board is provided on the down platform for all Northern Trains terminating at Morpeth; terminating services should not pass this board until station duties have been completed and the correct signal to 'draw forward' has been received from the train conductor.

Dated: 02/12/06

LN600 - SHAFTHOLME JN. TO RESTON GSP MORPETH

DMU Reversing Siding

When ready to depart, drivers of reversing trains must contact the signaller via GSMR before departing from either M120 or M122 and then wait for the signaller's authority to proceed.

This instruction is replicated on LN696

Dated: 25/04/15

LN600 - SHAFTHOLME JN. TO RESTON GSP MORPETH

Electrification Depot

If a train has entered the electrification depot, no other train must be allowed to enter No.2 siding from either end until the Signaller has received an assurance that the train in the electrification depot is clear of the connection and no further movements will be made.

No movement must be made from the electrification depot which will foul No.2 siding without the authority of the Signaller which may be given, provided the Signaller has not authorised a conflicting movement into No.2 siding.

This instruction is replicated on LN696

Dated: 02/12/06

LN600 - SHAFTHOLME JN. TO RESTON GSP BERWICK-UPON-TWEED To Reston GSP

Single Line Working Between Berwick and Reston

When Single Line Working is introduced between Berwick and Reston, it must apply between No.535 Crossover at the north end of Berwick Station and Reston Crossovers.

When Single Line Working is in operation over the Down line, it will not be necessary to appoint a Handsignaller for Up direction trains. Drivers of Up direction trains must be instructed by the Pilotman to obey signals TW180R, TW180 and TW176. Rule Book Module P1, Section 3.5 a) and 6.2a) are modified accordingly.

Drivers of Up trains may be authorised to proceed without being accompanied by the Pilotman. Rule Book Module P1, Section 7.2 is modified accordingly.

The above arrangements are applicable in all weather conditions.

Dated: 02/12/06

LN600 - SHAFTHOLME JN. TO RESTON GSP**BERWICK-UPON-TWEED****Royal Border Bridge: Staff Safety Facility**

Separate indication panels for each line and a telephone communicating with Tweedmouth Signal box, are provided at the North end of Bridge 195 and the South end of Bridge 194.

Any person requiring to enter onto or pass over the Royal Border Bridge must:-

- a) request permission from the Signaller, identifying himself by giving his name, grade and home station/depot.
- b) say why he requires to enter onto or pass over the bridge, on which line he needs protection and for how long permission is required.

If the Signaller is unable to give permission immediately, the person calling will be instructed to wait and telephone again, later.

When the Signaller is able to give permission, he will instruct the person to operate the appropriate "on" plunger, which will illuminate the "proceed when lit" indication. If the "proceed when lit" indication is already illuminated owing to the system being in use, the Signaller will, if a sufficient time margin allows, give verbal permission and the person may then pass over the bridge.

When the person is clear of the bridge, he must telephone the Signaller again, identify himself by name, grade and home station/depot and advise him that he is clear of the bridge.

The Signaller will instruct the person when to operate the appropriate "off" plunger to extinguish the "proceed when lit" indication. If the system is still in use, the Signaller will note the advice.

When more than one person requires to pass over the bridge, the person in charge is responsible for observing the foregoing instructions.

Royal Border Bridge Trains Stopped By Accident, Failure, Obstruction Or Other Exceptional Cause.

Whenever possible trains must not be stopped on the Royal Border Bridge. If a train is stopped on the bridge, the Driver must be aware of the low bridge parapets and not alight on the cess side of the train unless absolutely necessary.

If the nature of the failure / stoppage requires the immediate protection of the opposite line in accordance with Rule Book Module M1 the Driver must switch on the trains Red lights, alight carefully and carry out the necessary protection.

If it evident that protection of the opposite line is NOT required immediately, the Driver should remain on the train, contact the Signaller at Tweedmouth by GSMR or other convenient means as quickly as possible. If it is not possible to contact the Signaller at Tweedmouth by GSMR or telephone the Driver must remain in the cab until contacted as described for a Limited Clearance situation in Rule Book Module SS2, Section 5.9.3.

Dated: 07/05/16

LN600 - SHAFTHOLME JN. TO RESTON GSP**BERWICK-UPON-TWEED****Working of passenger trains over the Up Goods Loop.**

Passenger trains may be run over the Up Goods Loop at Berwick upon Tweed provided the Signaller has observed the requirements of Rule Book Module TS1 General signalling regulations 11, Working of passenger trains over Goods Lines or Goods Loops.

Drivers must report on telephone immediately train at a stand at signal TW170

Dated: 01/12/07

LN600 - SHAFTHOLME JN. TO RESTON GSP**Darlington Up Sidings**

The Railway Undertaking Person In Charge (PIC) is in charge of all movements at this location.

The PIC must request clearance of T881 GPL to gain access to the sidings.

Siding No 4 is to be used for train arrivals.

The preferred route to run round is to return through Siding No 1.

Stabled trains must only use No 2 Siding.

The PIC will contact the signaller to obtain authority for any movements towards T876 signal.

Dated: 13/07/19

LN600 - SHAFTHOLME JN. TO RESTON GSP

Darlington Down Sidings

There are still incidents occurring where trains booked for Down Sidings are stopping in Platform 4B in advance of T888 signal and then authorised forward into the Sidings by the Ground Frame Operator once 1080 points have been set in Reverse position.

This is unacceptable and could be categorised as a SPAD. To prevent this from happening, the process below must be followed:

- Passing T888 towards Down sidings can only be authorised by the signaller.
- Any driver requiring to enter the Down Sidings must stop their train in rear of T888 signal and contact the signaller before making any further movements.
- Once the signaller has been contacted and 1080 points have been set in reverse position, the signaller can then authorise the driver to pass T888 signal at Danger and go forward to the Down Sidings.

Railway Undertaking (TOC specific) Instructions regarding Power supply restrictions.

Edinburgh Waverley Station – Longniddry TSC – Reston TSC – Chathill TSC.

[Copy repeated in SC147 BERWICK TO HAYMARKET WEST JN (VIA WAVERLEY)]

Details of the 3 existing power restrictions are detailed in separate Sectional Appendix Local Instructions.

London North Eastern Railway (LNER) & TransPennine Express (TPE) only have the following instructions applicable to the Portobello, Innerwick, & Marshall Meadows OHL feeder stations between the following locations:

-

Chathill TSC (45m 56ch) and Edinburgh Waverley Station 0m 00ch.

Down Direction (LNER - Sundays only)

Where identified planned trains services will be designated to transition to DIESEL mode dynamically at the APCo site (see Sectional Appendix General Instruction for APCo) on the approach to Chathill (see Table A for details) and these designated trains should continue to Edinburgh in Diesel mode.

Down Direction (TPE - All days)

All services must transition to diesel mode statically at the designated station (Morpeth) before approaching the restricted zone, continuing to Edinburgh Waverley station in Diesel mode.

Up Direction (LNER - Sundays only)

Where identified planned trains services will be designated to depart Edinburgh Waverley station in DIESEL mode and remain so throughout the restricted zone. Pantographs must not be raised until the MPCo site at Alnmouth 37m 31ch where ELECTRIC mode should be selected (see Sectional Appendix General Instruction for MPCo).

Up Direction TPE (All days)

All services to commence in diesel mode from Edinburgh Waverley station and remain in Diesel through the restricted zone. Pantographs must not be raised until the MPCo site at Alnmouth 37m 31ch where ELECTRIC mode should be selected (see Sectional Appendix General Instruction for MPCo).

LN618 - HOLGATE JN TO SKELTON JN.

York Yard North Sidings / Klondyke Yard / Turntable

Before proceeding towards No1 Independent siding / Turntable, the traincrew must have the necessary competence to operate the equipment. York ROC, York North Workstation signaller may signal a train into the area providing they have assurance that no conflicting moves have been authorised.

The person in charge of train movements in the siding is responsible for authorising train movements within the siding and up to the "Stop Await Instructions" departure board. A movement may only be authorised to pass a stop board providing no conflicting movement has been authorised or signalled.

No vehicles must be left stabled on No.1 Independent siding or the turntable area.

Dated: 20/07/19

LN618 - HOLGATE JN TO SKELTON JN.

YORK YARD NORTH & SOUTH SIDINGS COMPLEX

LOCAL INSTRUCTION - CONTROL OF MOVEMENTS

Authorisation for trains to enter or leave these locations is conducted under one of the following methods of working:

Driver Only Working

When there is no PIC – the train driver is responsible for train movements.

PIC Working

PIC Working is when a Competent Person in Charge (PIC) is on duty and is responsible for all movements within the York Yard sidings complex.

This person must be registered with the York ROC, Leeds Sub ROC Shift Signaller Manager (SSM) giving their name, company and mobile telephone number.

The name and company of the PIC and the time they take and leave duty must be recorded by the SSM.

If the PIC is not competent to authorise a particular movement, the PIC must complete work and hand back control of the yard so that the necessary movement can be made under Driver Only Working (if applicable) or another PIC appointed.

During PIC Working the Person in Charge (PIC) of train movements is a nominated employee of previously authorised railway undertakings.

York Yard Sidings Complex

The York Yard **Up Sidings** comprises:

- York Yard Up Sidings Arrivals No.1 and 2 and shunt neck
- York Yard South Sidings (non-electrified)
- York Yard South Reception Sidings (Two through sidings electrified)

The York Yard South sidings complex also provides access to the following facilities:

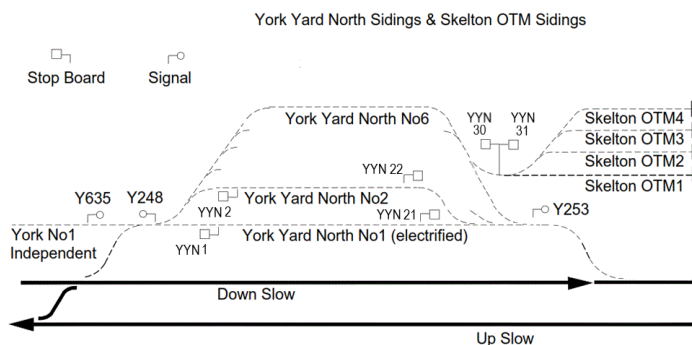

- Leeman Road Store Yard
- York Yard South Wagon Repair Depot
- Warehouse line / The National Railway Museum South Hall

The York Yard **Down Sidings** comprises:

- York Yard North Sidings (No1 siding ONLY is electrified)
- Klondyke Private Sidings
- Holgate Engineering Works
- Turntable
- Skelton OTM Sidings

Details are outlined in Table A – See LN618

London North Eastern Route Sectional Appendix Module LN3

Detail of York Yard North Sidings with Skelton OTM Sidings**Notes:**

YYN1, YYN2, YYN21, YYN221 & YYN30 are Stop Boards displaying instruction:

“Stop – obtain permission to proceed”

YYN31 is a Stop Board displaying instruction:

“Stop – proceed with caution”

YYN 1 siding – the only electrified siding - when necessary, a train may be refuged for a short period

YYN 2 siding is to be used for run round/shunting/reversing moves

YYN 6 siding is to be used for access/egress ONLY to Skelton OTM sidings

Skelton OTM Sidings

Steam Locomotives requiring coal or water must be located within the Skelton OTM sidings on siding line OTM 4. This may be completed on the approach side of Stop Board YYN30, Skelton OTM shunt neck, but only if room is not available on line OTM 4.

Access to the Turntable

Traincrew must have the necessary competence to operate the Turntable equipment.

CONTROL OF MOVEMENTS – DRIVER ONLY WORKING – YORK YARD DOWN SIDINGS

Driver Only Working must not commence until a clear understanding has been reached that any previously authorised movements have been completed.

The Driver is responsible to check that any hand points are set correctly for the safety of the move.

During Driver Only Working the Train Driver is responsible for obtaining the Signaller's permission to proceed beyond any stop board.

Hand points MUST always be returned for safety of movements to/from YYN 1 siding following any completed moves made during Driver Only Working.

Drivers proceeding into Skelton OTM sidings must advise the Signaller on arrival within the OTM sidings that they have arrived complete and hand points have been returned for the safety of movements to/from YYN1 siding.

Movements WITHIN the Skelton OTM sidings will be under the control of the driver

Any shunting movement requiring a train to be split or propelled must be completed under PIC Working arrangements.

CONTROL OF MOVEMENTS – PIC WORKING – YORK YARD DOWN SIDINGS

When PIC Working is in operation a PIC must be in charge (as per General Instruction above)

PIC Working must not commence until a clear understanding has been reached that any previously authorised movement has been completed.

During PIC Working the Signaller must obtain authority from the PIC before authorising any movement into York Yard down sidings

London North Eastern Route Sectional Appendix Module LN3

Under PIC Working conditions the PIC is responsible for authorising all movements within York Yard down sidings.

Hand points MUST always be returned for safety of movements to/from YYN 1 siding prior to completion of PIC Working arrangements.

The Driver's authority is only to proceed as far as any Stop Board.

Drivers proceeding to Skelton OTM sidings must advise the PIC on arrival within the OTM sidings that they have arrived complete.

When the PIC is to leave duty or there is a change of PIC, they will contact the Shift Signaller Manager and confirm any previously authorised movements have been completed and inform them of the status of YYN 1 siding and if necessary, points have been returned for the safety of moves to/from YYN1 siding.

The PIC must advise the relevant Signaller of any movement requiring to leave York Yard down sidings.

When all movements have been completed. Unless they have received prior permission from the relevant company, vehicles must not be left in a position where they can block access for other companies' trains or vehicles.

If an electric train is required to be stabled in any of the electrified sidings or remain there after the PIC has left duty, the PIC must confirm to the SSM that the pantograph has been lowered and will remain so until otherwise authorised before leaving duty.

CONTROL OF MOVEMENTS – DRIVER ONLY WORKING – YORK YARD UP SIDINGS

York Yard Up Sidings - Driver only working

Driver Only Working must not commence until a clear understanding has been reached that any previously authorised movements have been completed.

The Driver is responsible to check that any hand points are set correctly for the safety of the move.

During Driver Only Working the train driver is responsible for obtaining the Signaller's permission to proceed past the stop board at the exit of Leeman Road Store Yard sidings or the York Yard South Wagon Repair Depot towards signal Y245.

Any shunting movement requiring a train to be split or propelled must be completed under PIC Working arrangements

CONTROL OF MOVEMENTS – PIC WORKING – YORK YARD UP SIDINGS

When PIC Working is in operation a PIC must be in charge (as per General Instruction above)

PIC Working must not commence until a clear understanding has been reached that any previously authorised movement has been completed.

During PIC Working the Signaller must obtain authority from the PIC before authorising any movement into York Yard Up sidings

Under PIC Working conditions the PIC is responsible for authorising all movements within York Yard Up sidings.

Trains Departing York Yard Up Sidings - PIC Working

The PIC must obtain authority from the relevant Signaller before authorising any movement towards the exit signal.

When all movements have been completed. Unless they have received prior permission from the relevant company, vehicles must not be left in a position where they can block access for other companies' trains or vehicles.

The PIC will ask the signaller for permission before authorising any movement past the Stop Board at the exit from Leeman Road Store Yard towards signal Y245.

The PIC must tell the SSM that work is complete, and that Driver Only Working may be resumed. The SSM must also be advised of the status of York Yard Up Arrivals No1 & No2.

ELECTRIC TRAIN

If electric train is to be stabled in any of the electrified sidings, or to remain there after the PIC has left duty, the PIC must confirm to the SSM that the pantograph has been lowered and will remain so until otherwise authorised before leaving duty.

If the signaller requests a Blockage to Electric Traction whilst the PIC is on duty the PIC must arrange for pantographs to be lowered and advise the SSM when this has been completed and confirm they will remain lowered until otherwise authorised.

ENGINEERING WORK

If engineering work affecting the signalling of trains is to take place within York Yard Up or Down sidings and PIC Working is in place the PIC must be consulted before any work commences.

Harpenden Jn		24 25	<p>Diagram details: The diagram shows four vertical lines representing running lines: US (Upward), DS (Downward), UF (Upward), and DF (Downward). Speed restrictions are indicated by numbers on the lines: 90 mph for US and DS; 65 mph for DS; 80 mph for DS; 100 mph for UF; 105 mph for UF and DF. EMU and HST labels are placed near the lines. At the bottom, there are boxes containing '90' for US, '90' for DS, 'EMU 100 110 HST 120' for UF, and 'EMU 100 110 HST 115' for DF. Curved lines with '40' indicate speed restrictions at junctions between lines.</p>		<p>TCB Luton Workstation as far as 12m.20ch RA8 AC: Derby ECR</p> <p>GSM-R </p>

LN3201 - ST. PANCRAS TO TAPTON JN (VIA DERBY)**Entire Line of Route**

Drivers of assisting locomotives called to rescue 12 car formation EMU stock must make no attempt to couple to the failed train until the gradient profile, permitted load for the locomotive and brake force required has been assessed to be adequate to control the combined formation.

Special care must be taken when using emergency adaptor couplers to move stock unbraked at 5mph to clear the line.

If in doubt NO attempt to couple to 12 car EMU stock formation should be made until these details have been provided.

Further restrictions on type of locomotive able to access MCL & CBI line of route are published in Table D4A (East Midlands) – Route clearance of locomotives.

In certain circumstances more than one locomotive may be required to achieve rescue.

Dated: 04/03/17

LN3201 - ST. PANCRAS TO TAPTON JN (VIA DERBY)**ST. PANCRAS To BEDFORD**

The Class 3 trains operating between Bedford and St. Pancras/Moorgate as published in the Working Timetable are especially authorised to operate as Class 3 trains. This authorisation especially amends Rule Book, Module TW1, Section 6.

Dated: 07/12/13

LN3201 - ST. PANCRAS TO TAPTON JN (VIA DERBY)**ST. PANCRAS****Starting of trains****Rule Book, Module SS1, Section 3.4**

The Ready to Start signal must not be given by means of the bell/buzzer communication, it must be given for all trains by means of the Right Away indicator.

Noise of Locomotives and HST power cars. To minimise noise in the station the following instructions apply:-

Locomotives. Unless required for shunting purposes, locomotives working trains into the station must be detached as soon as practicable after the train has stopped after which the engine must be shut down. Locomotives stabled at the buffer stop end of the station must not be restarted until required to leave the station.

HST power cars. The power car at the buffer stop end of HST sets must be shut down as soon as the train has stopped. The buffer stop end power car must not be restarted until 10 minutes before the train is due to depart.

Dated: 07/09/19

LN3201 - ST. PANCRAS TO TAPTON JN (VIA DERBY)**ST. PANCRAS****Maintenance Siding**

The CTRL maintenance siding is normally blocked by CTRL using the CTRL rules. However when it is blocked by Network Rail the Modular Rule Book T3 is authorised as supplemented by Network Rail local procedures.

Dated: 11/04/11

LN3201 - ST. PANCRAS TO TAPTON JN (VIA DERBY)**Cricklewood Depot Jn (South Siding group)**

For the purposes of siding possessions South siding road One to Five and Carriage wash Road are within a TOC leased area, the shunter is responsible for arranging any siding possession, IWA or COSS staff should contact the shunter.

Drivers Call-by Plungers at Cricklewood Depot Level Crossing

Due to the close proximity of signals CD61, CD63 and CD65 to the level crossing, Drivers Call-By plungers have been provided adjacent to the respective SPT in a locked (BR1 Key) cabinet. If during a failure of the level crossing, and before an attendant arrives the Signaller may request the driver operates the call-buy plunger. Once the call-by plunger has been operated the Signaller shall further instruct the driver, the Driver must satisfy themselves that the barriers are in the lowered position, and the crossing is clear before proceeding.

Note: This instruction does not apply if the crossing is being locally operated.

Dated: 22/03/21

LN3201 - ST. PANCRAS TO TAPTON JN (VIA DERBY)**Cricklewood Aggregate Terminal**

Departures

Propelling is authorised from WH491 towards Down Hendon line to reverse behind WH466

Due to limited clearance over Welsh Harp Viaduct the propelled move beyond WH491 may be performed by Unaccompanied Driver

Dated: 28/02/2022

THIS PAGE IS INTENTIONALLY BLANK

LN3201 - ST. PANCRAS TO TAPTON JN (VIA DERBY)**Elstow Sidings**

Arrivals

Setting back movements from Up Slow Line. When signal WH.597 is cleared for a movement to set back from the Up Slow Line to the sidings, the 'OFF' indicator in the Shunter's plunger cabinet will be illuminated. Provided the line is clear for the movement to be made, the Shunter must then depress the 'OFF' plunger to illuminate the white light set back signals which will be the Driver's authority to make the setback movement without receiving a handsignal from the Shunter. The Driver must remain at the Luton end of the locomotive during the set back movement.

This movement may also be controlled by radio

The Shunter must immediately extinguish the white lights by means of the 'Stop' plunger in case of emergency if movement is not controlled by radio

Departures

Propelling is authorised from WH 486 to up slow line in order to reach position light WH 597 for onward move in down direction.

The connections to the private siding and up slow to down slow cross over are not electrified.

Dated: 01/03/22

LN3201 - ST. PANCRAS TO TAPTON JN (VIA DERBY)**BEDFORD To ST. PANCRAS**

AC EMUs 12 Car Formations. Because of the possible effect on the Overhead Line Equipment, all AC EMUs running in 12 car formations will be subject to a maximum speed restriction of 75mph until further notice.

This restriction will not apply if **ALL** the EMUs in the 12 car formation are fitted with Brecknell Willis MK2 High Speed Pantograph (or similar).

Dated: 18/04/15

LN3201 - ST. PANCRAS TO TAPTON JN (VIA DERBY)**WELLINGBOROUGH****Neilson Sidings**

Neilson Sidings are comprise of 6 sidings, numbered 1 to 6. To enable a locomotive to run round a train within the yard, Siding No.1 (70 SLU) and Siding No.2 (64 SLU) are designated as run round lines and vehicles must not be stabled thereon.

Dated: 08/05/21

LN3201 ST PANCRAS TO TAPTON JN**NEILSONS SIDINGS**

ARRIVAL

The siding shunter will confirm that hand points HP05 are in the required lie, changing as required. The train will draw up to BK6069 signal, on the Up Slow, reading in the Down direction. The signaller will set a route into Neilsons Sidings. The driver will proceed under authority of the PLS.

When the siding shunter is not on duty the driver will assume the responsibilities of the shunter.

DEPARTURE

The siding shunter will confirm that hand points HP05 are in the required lie, changing as required. The train will draw up to the siding departure signal, BK6070, occupying a 'Train Waiting Track' which informs the signaller that a train is ready to depart. The signaller will set a route for the train to depart. The driver will proceed under authority of the PLS.

When the siding shunter is not on duty the driver will assume the responsibilities of the shunter

Dated: 01/01/20

LN3201 - ST. PANCRAS TO TAPTON JN (VIA DERBY)**Harrowden Jn To Kilby Bridge Jn**

Bi-Directional working is in place between Harrowden Junction and Kilby Bridge Junction. All COSS/IWA/SWL setting up a safe system of work in this area must do so in accordance with Handbook 6 General Duties of an individual working alone, or Handbook 7 General Duties of a controller of site safety, and Handbook 21 Safe Work Leader Blocking a Line Rulebook Module TS1 Regulation 13.2 and the RIMINI process. Before patrolling in a Red Zone may take place, the Patrolman must contact the Signaller at Derby EMCC, Kettering or Wigston Workstation and request the suspension of Bi-Directional working. The Signaller and the Patrolman must come to a clear understanding as to the location of the patrolling and complete the documentation provided. If the Signaller is not in a position to suspend Bi-Directional working, then track patrolling must not take place.

Dated: 09/11/2024**LN3201 - ST. PANCRAS TO TAPTON JN (VIA DERBY)****KETTERING**

In Route TPWS

There are In Route (IR)TPWS loops installed approx. 540 metres (590yds) beyond LR72 and LR70 signals, and approx. 213 metres (232yds) on the approach to the platform edge. They have a set speed of Passenger 25.5mph, and Freight 20.0mph. These IR-TPWS loops are only energised when the movement is under the authority of the Calling On signal.

Dated: 08/05/2021**LN3201 - ST. PANCRAS TO TAPTON JN (VIA DERBY)****KETTERING**

Permissive Working from LR70 and LR72

The Driver of an East Midlands Train shall control the speed of the train so that it does not exceed 20mph, after receiving the calling on signal associated with LR70 or LR72.

Dated: 08/05/2021

LN3201 - ST. PANCRAS TO TAPTON JN (VIA DERBY)**Wigston North Jn To Knighton Jn**

Working of the Up and Down Goods line. When a train has been admitted to the Up and Down Goods line, the Driver must advise the Signaller at Wigston Workstation for signal LR320 or Leicester Workstation for signal LR32 immediately the first train has stopped at the appropriate exit signal.

When a second train has been admitted to the Up and Down Goods line, the Driver must, immediately the first train has departed, move their train forward and stop at the exit signal and advise the appropriate Signaller accordingly.

When a train has been admitted to the Up and Down Goods line to enable the locomotive to run round its train, the Driver must advise the appropriate Signaller immediately the locomotive has stopped at the exit signal. When the run round movement has been completed and the train is stopped at the appropriate exit signal, the Driver must advise the appropriate Signaller accordingly.

Dated: 09/11/24**LN3201 - ST. PANCRAS TO TAPTON JN (VIA DERBY)****LEICESTER**

Up Carriage Sidings. Before a movement is made from the Up Carriage Sidings towards the exit signal, the Shunter must obtain the permission of the Signaller at Derby EMCC, Leicester Workstation. In the case of shunting movements the Signaller at Leicester Workstation must be advised when the shunting movements have been completed.

Dated: 02/01/12**LN3201 - ST. PANCRAS TO TAPTON JN (VIA DERBY)****LEICESTER To Syston South Jn**

Wheel Impact Load Detector (Wheelchex). This equipment analyses the dynamic wheel loads produced by each passing train. The data obtained may result in an alarm being received in Network Rail, Operations Control. A Wheelchex system is installed on the Down Fast, Up Fast and Up & Down Slow lines at Thurmaston 101m 78ch. If an alarm is received from the detector, the train will be stopped by signals and the Driver may be instructed by the Signaller to proceed at a reduced speed to a location where the train can be taken out of service.

Dated: 30/08/08**LN3201 - ST. PANCRAS TO TAPTON JN (VIA DERBY)****Humberstone Road Jn**

Down Sidings. When a train requires to enter the sidings, the Shunter must, after satisfying himself that the hand points have been correctly set and that the siding is sufficiently clear to accommodate the train and after carrying out the provisions of Rule Book, Module SS2, Section 3 and advise the Signaller at the EMCC, Leicester Workstation that he has done so.

The Shunter must inform the Signaller at the EMCC, Leicester Workstation when a train is ready to leave the sidings giving its description and destination

Down Fast line 'OFF' indicators. The illumination of an 'OFF' indicator, working in conjunction with the signal applying to movements from the Down Fast line to the 'Up and Down Goods line, Reception line or Down Sidings, will be the Driver's authority to commence the setting back movement and the provisions of Rule Book, Module SS2, Sections 3 and 4.1 and Module TW1, Section 26.3 are exempt except that the movement must not pass any signal at Danger. The setting back movements must be made at walking pace and the Driver must be prepared to act on a handsignal from the Shunter when he comes into view.

Dated: 07/12/13

LN3201 - ST. PANCRAS TO TAPTON JN (VIA DERBY)**DERBY****Derby R.T.C. Yard**

Acceptance of trains to Derby RTC Yard. The signaller controlling movements to Derby RTC Yard must gain the permission of the duty shunter before allowing a movement to be made towards Derby RTC Yard from the protecting signals. If there is no shunter on duty and there has been no prior agreement for the train to enter the yard (see section below), the signaller must contact NDS Infrastructure Group Control (IGC) on 01908 723500 (choose option 3 followed by option 2) for instructions.

When shunting staff are not available. Two unattended departures and arrivals can be authorised by the duty shunter. The duty shunter must advise the signaller controlling movements to/from Derby RTC Yard of the arrangements prior to leaving duty. These details must include train headcodes and route into/from the yard to be used. The duty shunter will also advise the driver of the unattended movement and SRO control as to the details, including stabling and disposal arrangements.

Control of shunting movements. The control of shunting operations is prohibited between the Down Main line and the Reception Road.

Propelling movements. Propelling movements to or from the above sidings are prohibited.

Dated: 03/12/17**LN3201 - ST. PANCRAS TO TAPTON JN (VIA DERBY)****DERBY****Working Of Diverted Services**

When there is a requirement to divert services between Derby/Nottingham/Leicester via Sheet Stores Junction and Stenson Junction, then the services concerned will be routed accordingly at Derby or Sheet Stores Junction.

Down direction services will be routed from Sheet Stores Junction via the Down Chellaston line to the Down Main line at Stenson Junction where the Driver must bring the train to a stand clear and in rear of ground position light signal DY.300 for a reversal movement. The Driver must then change ends through the unit or by using the Down Main line cess. When a diverted Down direction service is ready to depart to the Up Main line the Person in Charge of the train must advise the Signaller in Derby box accordingly.

Up direction services will be routed from Derby via the Down Main line to Stenson Junction where the Driver must bring the train to a stand clear and in rear of ground position light signal DY.300 for a reversal movement. The Driver must then change ends through the unit or by using the Down Main line cess. When a diverted Up direction service is ready to depart to the Up Chellaston line the Person in Charge of the train must advise the Signaller in Derby box accordingly.

Dated: 30/08/08**LN3201 - ST. PANCRAS TO TAPTON JN (VIA DERBY)****DERBY North Jnc****Shunt movements reversing at DC5078.**

The driver must be able to walk through a train which reverses at this signal. If this is not possible the person arranging the movement must advise the signaller and the movement will then be signalled to reverse at signal DC5076 Line D

Only Signal DC5076 must be used for reversing trains unless the Signaller has received confirmation that the Driver can walk through the train

Permissive movements towards platform 6 Derby from DC5076 signal.

Before DC5076 is cleared for a permissive move towards platform 6, the train shall be brought to a stand at DC5076, the driver shall be advised, that the movement is to proceed into an occupied platform

Dated: 17/07/2021

LN3201 - ST. PANCRAS TO TAPTON JN (VIA DERBY)

Chaddesden Sidings

Working of Chaddesden Sidings

Person in Charge (PIC)

When there is Ground staff on duty they will assume the duties of a Person in Charge (PIC) and give their name and contact details to the signaller. The signaller must obtain the permission of the PIC prior to authorising any movement entering or leaving the yard.

ARRIVALS

Trains that can be driven from the leading end are permitted to enter Chaddesden sidings without a PIC being present provided no other movement has been authorised to approach DY496 or DY494.

The Driver of any train arriving into the sidings when there is no PIC on duty, must advise the Signaller when the train is at a stand.

DEPARTURES

Trains will not approach DY496 or DY494 unless the driver received the authority of the signaller or PIC if on duty. If a movement has been signalled into the sidings then no train will be permitted to approach DY496 or DY494 until the arriving train has come to a stand in the sidings.

Dated: 01/10/16

LN3204 - TRENT SOUTH JUNCTION TO NOTTINGHAM EAST JUNCTION

BEESTON SOUTH JN

Movements to run round siding 1.

The clearance of the position light aspect of signal TN4917 or TN4919 to this siding requires that the spring hand points (at the entrance to the siding) are correctly set and detected. The driver does not need to examine the points before proceeding over them. If the detection fails the signaller must authorise the driver to pass the signal at danger and make sure that the spring points are set in the correct position to run round siding 1.

Run round sidings 1 and 2.

These sidings must normally be left clear and only used for running round or reversing a train. If in emergency it is necessary to detach a vehicle and leave it in the siding the signaller at Nottingham workstation must be advised and arrangements made for it to be removed as soon as possible.

NOTTINGHAM WEST JN

Shunt movements reversing at signal TN4969.

The driver must be able to walk through a train which reverses at this signal. If this is not possible the person arranging the movement must advise the signaller and the movement will then be signalled to reverse at signal TN4961 (A Line) or TN4967 (D line)

NOTTINGHAM STATION

Trains arriving in platforms 1, 3, 6 and 7.

Drivers of short trains (five coaches or less) into platform 1, 3, 6 or 7 that have received a main aspect signal to enter an unoccupied platform, must stop the train at the furthest B marker board within section B of the platform unless otherwise indicated by station staff.

Driver Relief of freight trains and light locomotives.

On arrival at Nottingham station a driver who is to relieve a freight train or light locomotive must advise the Nottingham workstation signaller at EMCC (01332-442399) and check which platform starting signal the train will arrive at for relief.

If a west bound train arrives at Nottingham before the relief driver, the train driver may be instructed by the signaller to proceed to Beeston South Jn. to await relief at Beeston station up platform.

Platform 2

A four car DMU must not be uncoupled in Platform 2 unless signal NN4002 has been cleared. When the uncoupling has been completed and the DMU is on the approach side of the signal the signaller must be advised unless the train is to immediately depart.

Stabling of trains in Nottingham station.

Diesel multiple units with parking brakes and Class 252/3 HST trains may be stabled in the platforms. Any other type of stock must only be stabled after a risk assessment has demonstrated it is safe to do so.

NOTTINGHAM EAST JN**Cleaning of Diesel Multiple Units in Platforms 6 and 7.**

Drivers of trains working into platform 6 or 7, must be prepared to bring their trains to a stand at the red lamp provided 15 yards from the end of diesel multiple units during carriage cleaning operations. No movement in any direction must be made by the Driver of a train on Platform Lines 6 and 7 until they have received the permission of the Person in Charge of the platforms and all Train Not To Be Moved Boards have been removed from the exterior of the diesel multiple units.

EASTCROFT TRAIN MAINTENANCE DEPOT

General. All movements to, within and from Eastcroft Train Maintenance Depot are under control of the Shunter.

Movements entering Eastcroft Train Maintenance Depot from Nottingham Station.

Drivers of trains requiring to proceed to the Eastcroft Train Maintenance Depot must contact the Person in Charge at Nottingham Station. The Person in Charge must advise the Shunter at Eastcroft Train Maintenance Depot of the movement required. The Shunter must then request the Nottingham Workstation Signaller to set the route for the movement, the train may proceed to the 'Stop and Await Instructions' board. The Shunter will check that all handpoints are correctly set for the movement and when this has been done, authorise the Driver to proceed.

Movements requiring to be made from one siding to another.

Any movement requiring to be made from one siding to another must pass clear of all hand points so that the whole train is on the Nottingham station side of the 'Stop and Await Instructions' board. The Shunter will contact the Signaller at the EMCC Nottingham Workstation and request the clearance of signal NN.4012 for such movements. Movements exceeding three vehicles will be routed towards Nottingham station. Movements of three vehicles or less will be routed towards the neck.

All trains requiring to be fuelled.

Movements beyond the 'Stop and Await Instructions' board at each end of Fuelling Point are controlled by the 'Designated Person'. The 'Designated Person' is identified by an orange arm band with the letters D.P. in black. Drivers of trains onto and off the fuelling bay must only proceed when authorised to do so by the 'Designated Person'. The movement must then stop clear of all lines and await the Shunter's instructions.

Departing movements. The Shunter will advise the Signaller at the EMCC Nottingham Workstation and give permission for movements departing the sidings to proceed only as far as signal NN.4012 or NN.4014.

Dated: 11/02/2023

LN3204 - TRENT SOUTH JUNCTION TO NOTTINGHAM EAST JUNCTION NOTTINGHAM

THIS INSTRUCTION IS TO BE READ IN CONJUNCTION WITH SECTION B OF THE RELEVANT WEEKLY OPERATING NOTICE.

USE OF POSSESSION LIMIT VEHICLES

Nottingham Station is permitted to use ECS vehicles in any platform during a possession of a running line for engineering work.

These vehicles will act as the "Possession Limit" in place of the usual PLB and detonators. At the other extreme of the possession the standard protection of a PLB and 3 detonators will be used.

Before the possession is granted:

When a platform line is to be blocked under Rule Book Module T3 and Handbook 11 and ECS is stabled on that line, the PICOP must supply, and ensure that the following protection is placed on the ECS before completing section 1 of the RT3198 form.

- During daylight - a NOT TO BE MOVED board or a red flag.
- During darkness or poor visibility – a NOT TO BE MOVED board and a red light (steady or flashing). – These may be the tail lights of the stabled ECS.
- PICOP must add his/her own “tag” to the NOT TO BE MOVED board **

The PICOP must make sure this protection is displayed on the platform side of the ECS:

- At both ends of the ECS, if it can be driven from either end, or:
- On the outer most ends of a raft of ECS.
- In addition – That a chock is placed against the wheels of the vehicle closest to the worksite.

Once the work has been completed:

The PICOP in charge must ensure that all ECS protection as described above has been removed, before the possession is given up, UNLESS, the TOC staff are using the ECS protection for their own protection.

It will be the responsibility of the PICOP to ensure that any chocks placed on the ECS (as instructed above) are removed prior to possession being given up.

The above instruction has been agreed with the relevant train operators and with East Midlands Trains who are the recognised TOC who control Nottingham Station.

** A “tag” is a personal identification that is recognised at Nottingham station. These are key tags that have an individual’s name or job title on a key fob that is attached to the Train Not to Be Moved Board.

LN3207 - TRENT EAST JN TO CLAY CROSS NORTH JN

Toton No. 4 LC (MOCL)

This is an open level crossing with road traffic signals which are activated when a signalled route is set and a train approaches.

The person in charge of a train movement should not ask the signaller to clear the signal unless the movement can be made immediately the signal clears.

The protecting signal will clear when the road traffic signals have operated for the required time. Failure of the road traffic signals will prevent the protecting signals clearing.

Before a train proceeds over the crossing, the driver (or shunter controlling a propelling movement) must make sure the crossing is clear.

If a protecting signal has to be passed at danger, the signaller will activate the road traffic signals before authorising the driver to pass the signal at danger.

Failure of the road traffic signals will prevent the protecting signals clearing, and a crossing attendant must be appointed to take local control. When the attendant has switched on the road traffic signals, the signaller will authorise the driver to pass the protecting signal at danger. No rail movements over the crossing are permitted until a crossing attendant is appointed.

Dated: 17/10/09

ELR - MCL

Due to restricted clearances traincrew must not put their heads out of the train while passing over this route.

Owing to restricted 'window box' clearances along the route, passenger trains composed of stock with opening windows (other than those of the "ventilator" type) are prohibited from traversing this section of track, except where special authority is granted. When authority is granted for passenger trains the following conditions apply:

1. The train running must be published in Special Traffic Notice.
2. To mitigate the risk of limited clearances to passengers while passing through the tunnels along this route:
 - a) All passengers must be advised by public address and in writing not to lean out of windows;
 - b) The train must be staffed by a Train Manager and Stewards, who will be briefed by the Train Manager;
 - c) Prior to passing through the tunnels on this route, an announcement must be made using the public address system to instruct all passengers not to lean out of the windows during the passage of the train through the tunnels. Stewards must pass through all vehicles and repeat the instruction to all passengers.

LN3237 - LOUGHBOROUGH SOUTH JN TO HOTCHLEY HILL

Loughborough South Jn To Hotchley Hill

Working between Loughborough South Junction and the Network Rail Boundary at 92m 45ch. The Single line connection between Loughborough South Junction and the Network Rail Boundary is worked by the track circuit block system indicated by sequential track circuiting. A movement that has proceeded beyond the Network Rail Boundary towards Hotchley Hill, will occupy the track circuit at Loughborough South Junction until such time that the movement returns from Hotchley Hill to Loughborough South Junction and activates the track circuit. When the return movement has cleared Loughborough South Junction the Single line will be available for another movement.

If a movement requires to operate to Hotchley Hill and will not return within a reasonable period of time or on another day, then the movement must be worked with two locomotives or a locomotive at each end of the train to Hotchley Hill. Upon arrival at Hotchley Hill one of the two locomotives or the trailing locomotive will be detached to return to Loughborough South Junction and activate the track circuit and clear the branch for normal working. When the movement is required to return from Hotchley Hill to Loughborough South Junction then an additional locomotive must be despatched via Loughborough South Junction to Hotchley Hill and attached. The movement will then work forward with two locomotives or a locomotive at each end of the train.

A footpath level crossing is situated between Loughborough South Junction and Barnstone Tunnel at 91m 16ch. Drivers must pay particular attention on the approach to this level crossing and must not pass over it until it is safe to do so.

Except in an emergency a manned or unmanned locomotive must not be left on this branch.

When a train, which is not formed of a Great Central Railway (Nottingham) movement, arrives at signal LR.506 the Driver must immediately advise the Signaller at Derby EMCC, Leicester Workstation whether or not the train is complete with tail lamp.

Following assistance of a disabled train. When the assisting and disabled train arrives at signal LR.506 the Driver must give an assurance to the Signaller at Derby EMCC, Leicester Workstation that the line is clear throughout.

LN3246 - AMBERGATE JN TO MATLOCK**MATLOCK****Method of working in connection with Peak Rail running trains into Matlock Station Platform Two.**

Peak Rail will be operating passenger services into the renewed Platform Two at Matlock Station

Peak Rail Trains will operate from Darley Dale to the Buffer Stops at Matlock Station Platform Two, under the one train working with staff arrangements. This method of working will not interfere with the normal operation of Platform One at Matlock.

The maximum speed of Peak Rail Trains travelling over Network Rail Infrastructure is 10mph.

Actions in an emergency.

If an emergency arises with a Peak Rail train in platform two, the driver of this train must as far as practical, protect his train from approaching trains in the opposite direction. This is to be done by a Peak Rail employee, exhibiting a hand danger signal to approaching trains, this should be supplemented by the use of a whistle. The person protecting the train, must position themselves at the 15mph board at the south end of the tunnel.

If an emergency arises with a train in platform one, the driver of this train must as far as practical, protect his train from approaching trains in the opposite direction. This is to be done by the driver proceeding towards the Matlock sidings, and placing 3 detonators 20yds apart on the Peak Rail side of the Network Rail boundary, and by displaying a red flag or red light at night. The Signaller at the EMCC Derby Workstation must also be informed.

If a Peak Rail train explodes 3 detonators at the Network Rail Boundary, the driver must bring their train to an immediate stand, and contact the EMCC Derby Workstation before proceeding.

This instruction modifies the requirements of Rule Book Module M1

Operation of Matlock Ground Frame.

Matlock Ground Frame must not be operated unless you are in possession of the Peak Rail Train Staff.

Points being secured

During Peak Rail's operating period the points at the North end of the siding and run round loop, and the facing points to Peak Rail movements of Matlock GF will be jointly secured with a RKB222 padlock and a unique Peak Rail padlock, the key to the unique padlock will be attached to the Train Staff.

If work is required to be carried out on either set of points, or the points are required to be moved the person who requires to work on, or move the points must have in their possession Peak Rails train staff.

Line blockage or possession of Matlock Sidings

If a line blockage or possession of the siding at Matlock is required, arrangements must be made with Peak Rail's Duty Officer for the Train Staff to be collected by the appropriate person. A line blockage or possession will not be granted without the IWA/COSS/PC or PICOP being in possession of the Peak Rail Train Staff.

LN3239 - DERBY NORTH TO CHADDESSEN SIDINGS

Chaddesden Sidings

When ground staff are on duty, they are only responsible storage sidings 5-7.

Trains can be signalled up to EC5491 or EC5493 without the authority of the PIC, unless the PIC has already requested a move towards the relevant signal.

A train must not be allowed to proceed from the stop board EC5492 and EC5494, towards EC5490 to await acceptance if a movement has already been signalled or authorised from any siding 1-7 towards the Chaddesden Arr/Dept 1.

Trains may be signalled from Carriage siding 1-4, without the authority of the PIC, unless the PIC has already requested a move towards EC5496

A train must not proceed from stop boards EC5505, EC5506, or EC5507 to await acceptance at EC5496 GPL

When there is Ground staff on duty they will assume the duties of a PIC and give their name and contact details to the signaller. The signaller must obtain the permission of the PIC prior to authorising any movement requiring to enter the storage sidings 5-7

ARRIVALS

Trains that can be driven from the leading end are permitted to enter Chaddesden sidings **without** a PIC being present provided no other movement has been authorised to approach EC5491 or EC5493

The Driver of any train arriving into the sidings when there is no PIC on duty, must advise the Signaller when the train is at a stand.

DEPARTURES

Trains will not approach EC5490 or EC5496 unless the driver received the authority of the signaller or PIC if on duty. If a movement has been signalled into the sidings then no train will be permitted to approach EC5490 or EC5496 until the arriving train has come to a stand in the sidings.

Engineers On Track Machines must not operate between Melbourne Junction and Sinfyn Central unless specially authorised.

Sinfyn Nos.1, 2 and 3 Ground Frames. Trains must not be shunted into the intermediate sidings at Sinfyn Nos.1, 2 and 3 ground frames for other trains to pass.

Dated: 02/12/06

LN3520 - SHEET STORES JN. TO STENSON JN. CASTLE DONNINGTON

Trains requiring use of the run round facility only

A train may be signalled into the Castle Donnington Private Siding arrival road without a PIC being present. The points (001A/B) controlling the entrance to the arrival and departure lines are spring loaded towards the arrival line, therefore the train driver must not proceed beyond the points indicator located on the approach to 001A/B points if it is not showing a steady yellow aspect.

All train movements following the arrival of the train must be undertaken with a Freight Operating Company (FOC) Person in Charge (PIC) having notified EMCC Trent Workstation that they are on site.

In the event of a FOC PIC being already on site for movements within the terminal, their contact number must be relayed by the EMCC Trent Panel signaller to the incoming FOC PIC to authorise further train movements.

Upon the completion of the run round and departure of the train, the FOC PIC must advise the signaller on Trent Panel that: -

The arrivals road is empty

The points are correctly set for the arrival road

The points indicator is displaying a steady yellow aspect

The FOC PIC must then give up control of the run round loop with the signaller on the EMCC Trent panel.

Trains requiring access to the Castle Donnington Private Siding Terminal

All trains requiring access to the terminal must have a PIC on site to accept the train who must notify EMCC Trent Workstation upon arrival.

Upon the completion of terminal duties, the PIC must advise the signaller on Trent Panel that: -

The arrivals road is empty

The points are correctly set for the arrival road

The points indicator is displaying a steady yellow aspect

The FOC PIC must then give up control of the run round loop with the signaller on the EMCC Trent panel.

Infrastructure Maintenance Activities preventing rail access

In the event of any maintenance activities being undertaken within the run round facilities which would preclude train access, the maintainer must advise EMCC Trent Workstation at the commencement of works and when the possession of the sidings is given up. The signaller must apply a reminder appliance during any such works.

Melton Jn GF

Working of Melton Junction Ground Frame. All trains requiring to proceed from the Up Main line to the Asfordby Single line must be positioned on the Melton Mowbray station side of the 'Stop' board worded "Trains for Asfordby Branch proceed when indicator is illuminated" whilst the ground frame is being operated. All trains leaving the Asfordby Single line must be positioned on the Melton station signal box side of the 'Stop' board applicable to Down direction movements whilst the ground frame is being operated.

Working of the Down and Up Asfordby line. The token for the Melton Junction to Asfordby Mine section must be carried by the Driver of the leading locomotive at all times.

Before a train departs from either Melton Junction or the former Asfordby Mine site, the Driver of the leading locomotive must confirm to the Driver of the rear locomotive that he is in possession of the token for the Melton Junction to Asfordby Mine section.

Working of the Down and Up Edwalton line. Trains for the Down and Up Edwalton line must obtain a token for the Melton Junction Ground Frame to Asfordby Mine section at Melton Junction Ground Frame. When the train has arrived at Asfordby Junction Ground Frame (formerly Melton Ground Frame) and is clear of the Melton Junction Ground Frame to Asfordby Mine Single line, the token must be replaced in the token instrument at Asfordby Junction Ground Frame.

Dated: 02/12/06

LN3615 - HELPSTON JN TO SYSTON SOUTH JN LANGHAM To OAKHAM

The Down and Up Goods lines between Langham and Oakham boxes are worked in accordance with the Regulations for working trains over goods lines not worked on any block system (No Block).

Stop signals will normally be maintained at Danger but when cleared, the Driver must understand that the line ahead may be occupied, even if the signal is cleared without the train being stopped or nearly stopped at the signal.

Dated: 02/12/06

LN3625 - NOTTINGHAM EAST JN TO NEWARK FLAT CROSSING (EXCLUSIVE)

Burton Joyce LC (AHBC-X)

When authorised to pass signal NN4043 at Danger, Drivers must ensure that the plunger provided on the signal post has been operated. Before proceeding over the level crossing, the Driver must satisfy himself that the barriers are in the lowered position. **Note:** This instruction does not apply if the crossing is being locally operated.

Dated: 07/11/16

LN3635 – ALLINGTON WEST JN (EXCLUSIVE) TO NETHERFIELD JN

Allington West Jn to Rectory Jn

Single Line Working Rectory Jn to Allington West Jn

Rule Book Module P1

When Single Line Working is in operation over the Down Grantham, it will not be necessary to appoint a Handsignaller for Up direction trains. Drivers of Up direction trains must be instructed by the Pilotman to obey signal AL3428.

Rule Book Module P1 Sections 3.5 a) and 6.2 a) are modified accordingly.

Drivers of Up trains may be authorised to proceed without being accompanied by the Pilotman.

The above arrangements are applicable in all weather conditions.

This instruction is Replicated in LN195

Dated: 07/11/16

Welton Oil Sidings

Set back movements into Welton (BP) Oil Sidings. Guards of trains requiring to set back into the sidings from the Up line must, after setting the hand points in the sidings, advise the Signaller accordingly. The Guard must then place himself in the most suitable position to control the movement.

The clearing of the position light signal (No.53/53R) will be the Driver's authority to proceed, and it will not be necessary for the Driver to comply with Rule Book, Module SS2 Section 2, but he must proceed cautiously, keeping a sharp look out and be prepared to act on a hand signal from the Guard when he comes into view. The train must be stopped when the locomotive is in rear of signal 54.

Dated: 02/12/06

LN736 - CLEETHORPES TO NUNNERY MAIN LINE JN VIA RETFORD

CLEETHORPES

Lockouts are provided which prevent trains being signalled into or out of the platforms shown:-

Platforms 1 & 2 (combined system - both platforms closed at the same time).

The protected area does not extend beyond the ends of the platforms.

Lockouts are not provided on other platforms.

The lockout must be used to protect staff who are to carry out work such as:-

- watering coaching stock at track level,
- fitters working on trains,
- clearing litter from the track,
- white lining platform edges.

If the lockout has been used, it will not be necessary to appoint a COSS. Where work is to take place on a train, or a train is standing in the platform whilst work is in progress, a NOT TO BE MOVED board must be securely fitted to the Drivers cab in such a position that it is clearly visible to the Driver of the train as well as being visible along the platform.

The operation of the lockout is as follows:-

The person taking the lockout must telephone the Signaller, identify himself by name and employing organisation, say what is to be done and ask for the lockout to be given.

When the Signaller is able to give the lockout, the light on the instrument will light; the button must then be pressed and the key turned and withdrawn. The Signaller must be advised when the key has been withdrawn.

There are two instruments in the cupboard, these work in parallel and it is only necessary to operate one of them.

The key must be retained by the person removing it and not left in the instrument cupboard, as long as it is out of the instrument the platforms are protected from train movements by the signalling system.

The same person must normally remain in charge of the key throughout the time it is out of the instrument; if this is not possible, he must, before transferring the key, telephone the Signaller, identify himself by name and employing organisation, and tell the Signaller to whom the key is to be transferred; that person must then identify himself by name and employing organisation.

When work is complete, the person who has charge of the key must telephone the Signaller, identify himself by name and employing organisation, and give the Signaller an assurance that all staff and equipment are clear of the line. When instructed to do so, he must return the key to the instrument and turn it to the lock position.

The platforms are now no longer protected.

ALWAYS ENSURE THAT YOU KNOW EXACTLY WHAT IS PROTECTED

LN736 - CLEETHORPES TO NUNNERY MAIN LINE JN VIA RETFORD BARNETBY

Nos. 1 and 2 Reception Sidings. Drivers of trains arriving in Nos.1 and 2 Reception Sidings in the Up direction must as far as practicable, stop clear of the inlet points.

Dated: 02/12/06

LN736 - CLEETHORPES TO NUNNERY MAIN LINE JN VIA RETFORD

Between:- Wrawby Jn And Brigg, Kirton Lime Sidings And Northorpe, Northorpe And Gainsborough Central

Rule Book Module P2, Section 7: Modified Working Arrangements on Single Lines

If the signalling system fails & a Pilotman is not immediately available, provided the authority of the Responsible Manager is obtained, Modified Working Arrangements may be introduced between Wrawby Jn & Brigg, Kirton Lime Sidings and Northorpe, Northorpe & Gainsborough Central. The arrangements are permitted for through train movements over the Up & Down Brigg single line only.

When the Responsible Person has authorised introduction of the arrangements to allow a train to proceed without being accompanied by a Pilotman in accordance with the requirements of Rule Book Module P2, Section 7 the Signaller will:-

- Tell the driver what is happening
- Dictate or hand, as appropriate, form RT3177 to the Driver
- Instruct the driver to pass the signal at danger, as shown in Part A of module S5 Passing a signal danger
- If necessary Instruct the driver to confirm the train has arrived clear of the single line complete with tail lamp

The Responsible Person must authorise the Modified Working Arrangements for each train to pass through the single line block section.

Working by Pilotman, as shown in Module P2, must be introduced as quickly as possible. The changeover to Working by Pilotman must be authorised by the Responsible Person.

Dated: 07/12/13

LN736 - CLEETHORPES TO NUNNERY MAIN LINE JN VIA RETFORD

Kettleby LC (AHBC)

Local control of Kettleby LC must be taken before an On Track machine not guaranteed to operate track circuits is allowed to pass over it.

Dated: 02/12/06

Failure of track circuits. During a failure of a track circuit between the double/single line connection and signal KL3, working by Pilotman will not be introduced provided the Signaller is satisfied that the line is clear. The Driver will be advised of the circumstances when he is instructed to pass a signal controlling the entrance to the affected portion of line at Danger. If the train subsequently stops on the affected portion of line owing to accident or failure, detonator protection must be carried out.

Dated: 02/12/06

LN738 - GREAT COATES NO. 1 TO UNION DOCK Entire Line Of Route

The train staff must normally be delivered to and collected from the Signaller at Great Coates No. 1.

To enable a second train to run between Great Coates No. 1 and Union Dock, the FOC Representative's Person in Charge is authorised to receive or deliver the train staff at the End of One Train Working and to convey the train staff between Great Coates No. 1 and the End of One Train Working other than by train.

If the FOC Representative's Person in Charge does not request the train staff, the train staff should be retained by the Driver until the movement arrives back at Great Coates No. 1. If the FOC Representative's Person in Charge has requested the train staff from a train at the End of One Train Working, the train must not pass the "Commencement of Staff Section" board until the train staff has been returned to the Driver by the FOC Representative's Person in Charge.

Working at junction of Up Locomotive Line and Up Goods Line at East End of locomotive Shed. Before locomotives leaving the Locomotive Depot upon the Up Locomotive line at the east end of the Locomotive Depot are permitted to foul the Up Through Siding, Drivers must satisfy themselves that no train is approaching on the Up Goods line. Similarly before trains running on the Up Through Siding are permitted to foul the Up Locomotive line. Drivers must satisfy themselves that no locomotives are leaving the Locomotive Depot.

Dated: 02/12/06**LN740 - GRIMSBY, MARSH WEST JN TO HUMBER ROAD JN****Immingham Reception Sidings SB (IR)**

1. A movement between the Reception Sidings or Storage Sidings and Humber Road Junction or vice versa may be hauled, propelled (subject to the limitations in Table B) or worked with a locomotive at each end to facilitate reversal. The Guard or Shunter in charge of the movement must advise the Signaller how the movement is to be worked, whether a locomotive is to be detached when the movement reverses and also whether the movement is fully fitted and if not, whether there is a brakevan.
2. When the movement has arrived complete and is at a stand at IR100 signal (Down Main) or in rear of IR213 signal (Up Main), the Guard or Shunter must advise the Signaller.
3. After reaching a clear understanding with the Driver of a train standing at IR100 signal that the train will not be moved, the Signaller is authorised to permit a light locomotive to pass IR207 signal at Danger to attach to the rear of the train.
4. A locomotive may be detached from the rear of a train standing at IR213 signal and the light locomotive may then follow the train as far as IR213 signal where the provisions of Rule Book Module TW3 Section 12.2 must be carried out.
5. Propelled movements from the Reception Sidings to the rear of IR213 signal are permitted to convey a red light on the leading vehicle; the provisions of Rule Book Module TW1, Section 14.1 are amended accordingly.

Dated: 07/12/13**LN740 - GRIMSBY, MARSH WEST JN TO HUMBER ROAD JN****Entire Line Of Route****Immingham Dock Siding Level Crossings**

Locomotives must not exceed a speed of 4 m.p.h. when passing over level crossings in the Dock area.

Drivers of locomotives, when approaching all level crossings in the Dock area, must sound the locomotive warning horn to give warning of approach.

LN742 - KILLINGHOLME TO BROCKLESBY JN

Killingholme (End of line) To Immingham West Jn

Working Of Shell Mex Open Level Crossing At 2 M. 34 Ch. And Yorkshire Tar Train Crew Operated Gates Level Crossing At 2m 44 Ch. By Trains For The Admiralty Sidings.

Light locomotive or trains comprised of one vehicle only may, after stopping and sounding the warning horn at Shell Mex Open level crossing, proceed to the Admiralty Sidings. Any other train must be worked in accordance with the following instructions:-

Arriving Trains for Admiralty Sidings

Trains must stop at the "STOP AWAIT INSTRUCTIONS WHISTLE BEFORE PROCEEDING" board positioned 25 metres before reaching Shell Mex Open level crossing at 2 m. 34 ch. The Trainman must then go forward to Yorkshire Tar level crossing and close the gates to road traffic. When the gates are secured for the rail movement, the Trainman must call the Driver forward. After sounding the warning horn, the Driver may proceed over both crossings towards the end of the branch to a point where the rear of the train has passed clear of Yorkshire Tar level crossing.

The crossing gates must be opened for road traffic and the Trainman must proceed to the Admiralty Sidings Ground Frame and set the route for the arriving train. The Trainman must then return to the Yorkshire Tar level crossing and close the crossing to road traffic. The Trainman must then instruct and control the set back movement towards the Admiralty Sidings until the train is clear of Yorkshire Tar level crossing. The crossing gates must then be opened to road traffic. The train may then be controlled into the Admiralty Sidings.

Trains Departing from Admiralty Sidings

Departing trains must be propelled towards and stopped at the "STOP AWAIT INSTRUCTIONS" board positioned 25 metres before reaching the Admiralty Sidings Ground Frame. The Trainman must then walk forward and close Yorkshire Tar level crossing to road traffic. When this has been done, the train may be called forward to the "PROPELLED TRAIN LOCOMOTIVE TO STOP HERE" board clear of the crossing. The Trainman must then reopen the crossing gates to road traffic and then close and lock the Admiralty Sidings Ground Frame. The gates of Yorkshire Tar level crossing must then be closed to road traffic and the Driver instructed to proceed over both the Yorkshire Tar and Shell Mex level crossings and stop with the rear of the train clear on the Immingham side of Shell Mex Open level crossing. The Trainman must then open Yorkshire Tar level crossing to road traffic and then rejoin the train.

Dated: 02/12/06

LN742 - KILLINGHOLME TO BROCKLESBY JN

Immingham West Jn To Killingholme (End of line)

These instructions are withdrawn for the period as this line is temporarily re-classified as Siding Infrastructure; 0001 on 10 April 2017 to 2359 on 31 October 2017

The Driver of each train traveling to the Killingholme Branch must stop at the **STOP** board lettered “**Telephone Signaller for Instructions Commencement of Staff Section**”, and contact the Signaller via the Signal Post Telephone on IW253 and obtain permission to remove the Train Staff. The train must not proceed until the Train Staff has been obtained and permission to pass the Stop board lettered “**Telephone Signaller for Instructions Commencement of Staff Section**” has been given by the Signaller. The Driver or shunter must also inform the Signaller when the train has passed clear of the connection from the Double line to the Single line complete with tail lamp.

When a train is to travel to Admiralty Sidings and will be locked inside the sidings it is authorised for the token to be returned to Immingham West end of the single line to facilitate engineering work on the Killingholme line or to allow another train to proceed onto the branch. The following procedure must be followed when this is to be done:

1. When the Driver of the train travelling to Admiralty Siding has passed clear of the Killingholme Single line and the Ground Frame has once again been returned to the Normal Position locking the train inside, the Driver must contact the Signaller at Immingham West and inform him/her this has been done.
2. The Signaller at Immingham West may authorise the Nominated Person to travel to Admiralty Sidings, take possession of the Train Staff and return it to the secure cabinet at the Immingham West end of the line.

When it is necessary to return the Train Staff to the Admiralty Sidings to allow the train to return to Immingham West, the Signaller at Immingham West must authorise the Nominated Person to:

1. Remove the Train Staff from the secure cabinet.
2. Return it to the Driver of the train locked in at Admiralty Sidings and instruct him/her to contact the Signaller at Immingham West, confirm they are in possession of the staff and obtain permission to return.

The Driver of each train leaving the Killingholme Branch must stop at signal IW253, replace the Train Staff in the secure cabinet, lock the cabinet and contact the Signaller via the Signal Post Telephone on IW253, and inform the Signaller the Train Staff has been replaced. The Driver must then obey signal IW253.

Dated: 10/04/17

LN742 - KILLINGHOLME TO BROCKLESBY JN**Immingham West Jn****Simon Storage West And Mineral Quay Level Crossings**

1. An Attendant will be appointed to operate the crossing.
2. The normal position of the barriers at each crossing situated over the Western Jetty Arrival and Departure lines and the Mineral Quay Sidings single line connection is in the raised position.
3. Arriving Trains
 - 3.1 When a train is required to proceed to the Western Jetty or Mineral Quay Sidings, the Attendant must press the crossing barrier "DOWN" button. When the barriers are lowered and the crossing is clear of road and rail vehicles on all lines, the Attendant must authorize the Driver to proceed over the crossing.
 - 3.2 When the train with tail lamp attached has passed clear of the crossing, and the crossing is again clear of rail vehicles on all lines, the Attendant must press the crossing barrier "UP" button.
4. Departing Trains
 - 4.1 When a train from either the Western Jetty or Mineral Quay Sidings is at a stand at the appropriate signal, the Signaller has been advised the train is ready to depart and the Signaller has indicated that he is able to allow the train to depart, the Attendant must press the crossing barrier "DOWN" button. When the barriers are lowered and the crossing is clear of road and rail vehicles on all lines the "CROSSING CLEAR" button must be pressed. This will illuminate a slot off the indication in the signal box and the Signaller will clear the signal for the train to depart.
 - 4.2 When the train with tail lamp attached has passed clear of the crossing, and the crossing is again clear of rail vehicles on all lines, the Attendant must press the crossing barrier "UP" button.
5. Stopping Level Crossing Barriers in an Emergency
 - 5.1 Should it be necessary to interrupt the lowering of the crossing barriers, the Attendant must press the crossing barrier "STOP" button, which will hold the barriers in the position they have reached. The sequence may then be resumed by pressing the crossing barrier "DOWN" button to complete closure of the crossing or by pressing the crossing barrier "UP" button to return the barriers to the raised position.

Dated: 03/12/11**LN750 - WOODBURN JN TO DEEPCAR****Deepcar Exchange Sidings**

LN756 - SCUNTHORPE TRENT JN. TO ROXBY**Dawes Lane LC (AOCL+B)**

Rule Book Module TW8, Section 4.4 will not apply at this crossing provided the Emergency Plunger Unit has been used and the Driver has satisfied himself that the Road Traffic Signal on both road approaches are operating. In such circumstances, the Driver may, even if the Driver's red light continues to show take his train over the crossing, ensuring it is safe to do so and sounding the horn continuously until the front of the train is on the crossing.

Dated: 16/01/16**LN756 - SCUNTHORPE TRENT JN. TO ROXBY****Entire Line Of Route**

The train staff must normally be delivered to and collected from Drivers at North Lincoln Jn. (S.353/S.357 signals) and the Signaller advised when this has been done.

To enable a second train to run between Trent Junction and Normanby Park, the Mobile R.S.T. is authorised to receive or deliver the train staff at Normanby Park and Roxby and to convey the train staff between North Lincoln Jn., Normanby Park and Roxby other than by train.

If the Mobile RST does not request the train staff, the train staff should be retained by the Driver until the movement arrives back at North Lincoln Jn.

If the R.S.T. has requested the train staff from a train at Roxby, the train must not pass the "Commencement of Staff Section" board until the train staff has been returned to the Driver by the Mobile R.S.T.

Delivery and receipt of staff by persons other than the signaller

Staff Station	Person authorised to receive or deliver staff other than the signaller
Scunthorpe Trent Jn. (North Lincoln Jn Chargemans Office)	North Lincoln Chargeman
Normanby Park	Mobile R.S.T.
Roxby	Mobile R.S.T.

Dated: 02/12/06**LN758 - BRANCLIFFE EAST JN TO KIRK SANDALL JN.****Dinnington Jn To Maltby****Rule Book Module P2, Section 7: Modified Working Arrangements on Single Lines**

If the signalling system fails & a Pilotman is not immediately available, provided the authority of the Responsible Manager is obtained, Modified Working Arrangements may be introduced between Dinnington Jn & Maltby. The arrangements are permitted for through train movements over the Down & Up South Yorkshire single line only. .

When the Responsible Person has authorised introduction of the arrangements to allow a train to proceed without being accompanied by a Pilotman in accordance with the requirements of Rule Book Module P2, Section 7 the Signaller will:-

- Tell the driver what is happening
- Dictate form RT3177 to the Driver
- Instruct the driver to pass the signal at danger, as shown in Part A of module S5 Passing a signal danger
- If necessary, instruct the driver to confirm the train has arrived clear of the single line complete with tail lamp.

The Responsible Manager must authorise the Modified Working Arrangements for each train to pass through the single line block section.

Working by Pilotman, as shown in Module P2, must be introduced as quickly as possible. The changeover to Working by Pilotman must be authorised by the Responsible Person.

Dated: 07/12/13

LN758 - BRANCLIFFE EAST JN TO KIRK SANDALL JN.**Dinnington Jn To Maltby Colliery****Tokenless Block working between Dinnington Jn. and Maltby Colliery****Rule Book Module P2, Section 1.1**

If a Pilotman is not immediately available, a Driver's Ticket may be issued to the Driver of each train. Drivers of Down trains will be brought to a stand at WP607 signal and will be instructed by the Signaller at Worksop to take a Driver's Ticket from the locked box located at this signal. The box is opened by a Drivers BR.No.1 key. The Driver must complete the Driver's Ticket by dictation given by the Signaller and repeat the contents to the Signaller. The Signaller will then authorise the Driver to enter the section.

If a train, the Driver of which is in possession of a Driver's Ticket, becomes disabled necessitating an assisting train entering the section, the Driver's Ticket must be left in the driving compartment of the disabled train. The Driver's Ticket must be handed to and retained by the Driver of the assisting train until both trains have been cleared from the section.

In all cases, the Driver's Ticket issued to the Driver of an Up train must be retained by him until reaching his depot and handed in at the depot with the word "Cancelled" written across it. The Driver's Ticket must then be forwarded to the Network Rail Local Operations Manager at Worksop.

Dated: 8/11/08**LN758 - BRANCLIFFE EAST JN TO KIRK SANDALL JN.****Doncaster St Catherines To Maltby.****Rule Book Module P2, Section 7: Modified Working Arrangements on Single Lines.**

If the signalling system fails & a Pilotman is not immediately available, provided the authority of the Responsible Person is obtained, Modified Working arrangements may be introduced between Doncaster St Catherines Junction and Maltby Colliery Signal box.

When the Responsible Person has authorised introduction of the arrangements to allow a train to proceed without being accompanied by a Pilotman in accordance with the requirements of Rule Book Module P2, Section 7 the Signaller will:-

- Tell the Driver what is happening
- Dictate or hand as appropriate, form RT3177 to the Driver
- Give the Driver any necessary instructions regarding the operation of level crossings.
- Instruct the Driver to pass the signal at danger, as shown in part A of module S5 Passing a signal at danger.
- Instruct the Driver to a Down direction train confirm the train has arrived at Doncaster Decoy complete with tail lamp.

The Responsible Person must authorise the Modified Working Arrangements for each train to pass through the single line block section.

Working by Pilotman, as shown in Module P2 must be introduced as quickly as possible. The change over to Working by Pilotman must be authorised by the Responsible Person.

Dated: 07/12/13**LN758 - BRANCLIFFE EAST JN TO KIRK SANDALL JN.****Maltby Colliery****Maltby North Shunt Spur**

Instructions to Traincrew departing from the bay line platform - Train ready to start plunger

When a train is ready to depart from Mansfield Woodhouse bay platform the Conductor must press the "Train Ready To Start" plunger.

When signal KS.118 is cleared and the associated "OFF" indicator has illuminated, the Conductor must give the train ready to start signal in accordance with the Rule Book.

Dated: 02/12/06

LN768 - MANSFIELD WOODHOUSE TO SHIREOAKS EAST JN

Shirebrook Jn

Langwith Jn Down Yard. When it is necessary for a movement to be made into Langwith Jn Down Yard, the Person-in-charge of the movement must instruct Messrs. W. H. Davis Ltd. staff to stand their locomotive clear in the group of sidings 3 to 6 until the movement has been withdrawn from the sidings.

Dated: 02/12/06

LN768 - MANSFIELD WOODHOUSE TO SHIREOAKS EAST JN

Elmton & Creswell

Drivers of trains stopped at a controlled signal operated from Elmton and Creswell Signal Box must, if unable to communicate with the signaller at Elmton and Creswell Signal Box (03-66647 or 01909-720277), ring Shirebrook Junction Signal Box (03-66646 or 01623-744623) to ascertain if Elmton and Creswell Signal Box is closed. If advised that Elmton and Creswell Signal Box is closed, drivers should observe the provisions of the Rule Book, Module S5, Section 7.2.

Dated: 07/12/13

LN784 - HIGH MARNHAM TO SHIREBROOK EAST JN

High Marnham To Thoresby Colliery Jn

The Rail innovation and Development Centre (RIDC) is from the “Start of Staff Section” board on the Up line on T4 signal at 17m 48ch to High Marnham and from High Marnham to the “End of Staff Section” board on T28 signal at 17m 25ch on the Down line. The RIDC also includes the Bevercotes Branch from its connection to the Down line at 20m 15ch to 1m..

The working of trains on RIDC is a modified form of One Train Working With divisible Staff from Thoresby Colliery Junction to the end of the operational line at 27m 55ch.

The following people are authorised to take the Staff/Annett’s Key from Thoresby Colliery Jn signal box Signaller:-

- Technical Officer (TO)
- Duty Technical Officer (DTO)
- Local Operations Manager
- Section Manager (Track)
- Assistant Section Manager (Track)

The Driver of each train travelling to the RIDC must stop at the board lettered “**Start of Staff Section**” on T4 signal (17m 48ch), and contact the Signaller. The train must not proceed until the Staff has been obtained and T4 signal shows a proceed aspect.

Up direction trains will travel over the Up line between Thoresby Colliery Jn signal box and Boughton Jn. The points at Boughton Jn must be operated before a train can proceed onto the Single line. Down direction trains will travel over the Down line which is bi-directional between Boughton Jn and Thoresby Colliery Jn signal box. Trains that are carrying out proving operations must not pass the “**Reversing Point**” notice board positioned adjacent to the Down Main line at 17m 37ch. The train staff will be kept in Thoresby Colliery Jn signal box when not in use.

A proving run for the first vehicle each day must be conducted as per local instructions at slow speed not exceeding 20mph.

The Driver of each train exiting from the RIDC must stop at the board lettered “**End of Staff Section. Return Staff to SB**” on T28 signal (17m 25ch), and contact the Signaller. The train must not proceed until the Staff has been returned and T28 signal shows a proceed aspect.

NOTE: The staff must always be returned before a train is allowed to leave the branch, even if it is only required to ‘run round’ before re-entering the branch.

Dated: 01/04/13

LN784 - HIGH MARNHAM TO SHIREBROOK EAST JN

Welbeck Colliery Jn

Trains setting back from the Up Main line to the Welbeck Colliery Branch.

When the “Off” indicator for 3-aspect colour light signal C233 is illuminated for a train to set back from the Up Main line to the Welbeck Colliery Branch, it will not be necessary for the Driver to comply with Rule Book Module SS2, Section 3.2 but he must proceed cautiously, keeping a sharp look out and be prepared to act on any hand signal received from the Guard or Shunter.

Propelled movements from the Welbeck Colliery Branch to the Up Main line.

A red light is permitted to be carried on the leading vehicle of a propelling movement between Up Welbeck line 3-aspect colour light signal C222 on the Welbeck Colliery Branch and the Up Main line.

Nunnery Main Line Jn to Holmes Jn

Instructions To Traincrews And Other Persons Concerned Working On Network Rail Lines Adjacent To South Yorkshire P.T.E. Supertram

Supertram lines run adjacent to Network Rail lines at the following locations:-

between Meadowhall Station and Bridge 12A (Tinsley Viaduct)

Additionally, Supertram lines pass over Network Rail lines at Nunnery Main Line Jn.

Except where clearances are inadequate, a fence is provided between Network Rail lines and Supertram lines.

Supertram lines are electrified at 750v DC overhead and the equipment must be regarded as alive at all times. The provisions of Rule Book Module AC must be observed as far as is practicable; reference to the Electrical Control Room or Electrical Control Operator must be taken to refer to the Supertram Electrical Power Controller.

If anything unsafe is observed or an emergency arises where it is necessary to stop or restrict in any way traffic on the Supertram line, the Signaller at York ROC Sheffield WS must be advised. Int 085 42001 Ext. 033 085 42001. If it would be quicker to do so, the Supertram control (tel.no.Sheffield (0114) 2798128) must first be informed direct.

Except at Meadowhall, Supertram lines are not signalled and track circuit operating clips must not be relied upon to stop a Supertram train in an emergency. If circumstances arise which require isolation of the overhead line equipment, the Supertram Authorised Person will issue a Permit to Work.

Engineering work which requires the opposite/adjoining line to be blocked or protected must not normally be carried out on lines which adjoin the Supertram line unless preplanned. In an emergency, work must not start until an assurance has been obtained from the Signaller that the Supertram line has been blocked or arrangements for its protection have been agreed and are in place.

Persons who work on Network Rail lines must not go onto the Supertram except in emergency or when authorised to do so. Supertram staff who are trained in personal track safety will carry a SYPTE Supertram Track Access Pass and may come onto adjacent Network Rail lines when necessary.

Dated: 02/05/16

LN804 - TAPTON JN TO GASCOIGNE WOOD (VIA SHEFFIELD)

MEADOWHALL

Between 08.00 and 19.00 hours

Drivers of all trains not booked to call at Meadowhall Station must sound the locomotive horn when approaching the Station.

Cleaning of Meadowhall Station covered footbridge exterior windows will take place on selected Sundays between 01 00 and 07 30. Drivers to note this will involve the use of a cradle above the Down and Up Main lines.

Dated: 30/08/08

LN804 - TAPTON JN TO GASCOIGNE WOOD (VIA SHEFFIELD)

Moorthorpe Jn

Rule Book Module P1

Single Line working over the Up Pontefract line

When single line working is in operation over the Up Pontefract line, it will not be necessary to appoint a handsignaller for Down direction trains. Drivers of Down direction trains must be instructed by the pilotman to obey signal L6579.

Rule Book module P1 sections 3.5a) and 6.2a) are modified accordingly.

Drivers of Down trains may be authorised to proceed without being accompanied by the pilotman.

The above arrangements are applicable in all weather conditions.

Dated: 31/05/11

LN804 - TAPTON JN TO GASCOIGNE WOOD (VIA SHEFFIELD)**Ferrybridge Power Station****Incoming "Open Level Crossing"**

The provisions of Rule Book Module TW8, Section 6 headed "Open Crossings (Non Automatic)" apply at this crossing.

If it becomes necessary for a set back movement to be made over the crossing, a competent person will be stationed at the crossing and no movement over the crossing must be made without their authority.

Edison Mission Level Crossing

The provisions of Rule Book Module TW8, Section 4.2 headed "Instructions the Driver must carry out at an ABCL or AOCL crossing at which trains are not required to stop", apply as far as practicable at this crossing.

Power Station Siding.

The Stop Board worded "Press Plunger Obtain White Light Whistle Before Proceeding", positioned adjacent to the Power Station Ground Frame, controlling movements towards the Power Station Level Crossing, may be passed without the authority of the signaller at Ferrybridge, provided the movement is entering the Shunt Spur and the Power Station Ground Frame release and its points are in the normal position.

Dated: 29/11/08

LN804 - TAPTON JN TO GASCOIGNE WOOD (VIA SHEFFIELD)**Ferrybridge Power Station Jn. To Milford Jn****Single Line Working. Rule Book Module P1**

When Single Line Working is in operation over the Down Pontefract Line, it will not be necessary to appoint a Handsignaller for Up direction trains. Drivers of Up direction trains must be instructed by the Pilotman to obey signal FE6616.

Rule Book Module P1 Sections 3.5 a) and 6.2 a) are modified accordingly.

Drivers of Up trains may be authorised to proceed without being accompanied by the Pilotman.

The above arrangements are applicable in all weather conditions.

Sheffield Station Sidings Method of Working

Due to the restricted clearance available into the Up Station Sidings 1 and 2, Down Station Sidings and the South Shunt Spur units should be stabled in accordance with the options shown below. Access to these sidings must be in accordance with the instructions shown below.

Northern Rail

Options	Siding
First Option	Sheffield Fish Dock
Second Option	Up Station Sidings 1 and 2
Third Option	Down Station Sidings
Fourth Option	Shunt Spur

Other Station Operators

Options	Siding
First Option	Up Station Sidings 1 and 2
Second Option	Down Station Sidings
Third Option	Shunt Spur

Sheffield Fish Dock

Staff requiring access or egress to Sheffield Fish Dock must use the official walking route.

Up Station Sidings 1 and 2

Staff requiring access to Up Station Sidings must use Platform 6. A blockage of Platform 6 and the Up Station Sidings 1 and 2 should be agreed with the signaller at York ROC Sheffield WS using the SPT on S109 signal. After reaching a position of safety the blockage should be given up via GSM-R.

Staff requiring egress from Up Station Sidings must use Platform 6. A blockage of Platform 6 and the Up Station Sidings 1 and 2 should be agreed with the Signaller at York ROC Sheffield WS via GSM-R. After reaching a position of safety the blockage must be given up using the SPT on S109 signal.

Down Station Sidings

Staff requiring access to the Down Station Sidings must firstly request a blockage of Platforms 1, 2 and the Through Line using the SPT on S95 Signal. Once in a position of safety the blockage must be given up via GSM-R.

Staff requiring egress to the Down Station Sidings must firstly request a blockage of Platforms 1, 2 and the Through Line via GSM-R. Once in a position of safety the blockage must be given up using the SPT on S95 Signal.

Shunt Spur

Staff requiring access and egress to the Shunt Spur must use the walking route and Sheffield Fish Dock.

The length of any line blockage requested must not exceed 5 minutes.

Temporary Method of Working

Rule Book Module P2 – 1.2 Exceptions 1 & 2

Inward Working Broughton Lane Junction to Tinsley Yard

Trains travelling from Broughton Lane Junction to Tinsley Yard may be signalled under Rule Book Module P2 section 1.2 (1 & 2).

The Signaller at Woodburn Junction **MUST** before clearing W212 signal: -

- Ensure a conflicting inward or outward movement has not been authorised between Tinsley South Junction and Tinsley Yard **and**
- Obtain permission from the shunter for the train to proceed towards AVESTA level crossing **and**
- Instruct the driver to disregard W228 signal, which has been restricted to a red aspect, ensuring that W316 points are in the correct position for the movement **and**
- Instruct the driver to proceed towards AVESTA level crossing and await the shunters instructions

The shunter or driver must also be instructed to confirm that the movement is in clear at Tinsley Yard complete with tail lamp.

Inward Working Tinsley South Junction to Tinsley Yard

Trains travelling from Tinsley South Junction to Tinsley Yard may be signalled under Rule Book Module P2 section 1.2 (1 & 2).

- The Signaller at Woodburn Junction **MUST** before clearing W205 signal: -
- Ensure a conflicting inward or outward movement has not been authorised between Broughton Lane Junction and Tinsley Yard **and**
- Obtain permission from the shunter for the train to proceed towards AVESTA level crossing **and**
- Instruct the driver to disregard W226 signal, which has been restricted to a red aspect, ensuring that W316 points are in the correct position for the movement **and**
- Instruct the driver to proceed towards AVESTA level crossing and await the shunters instructions

The shunter or driver must also be instructed to confirm that the movement is in clear at Tinsley Yard complete with tail lamp.

Outward Working Tinsley Yard to Broughton Lane Junction/Tinsley South Junction

The shunter will advise you when a train is ready to depart Tinsley Yard

Recording in the Train Register Book

The signaller must record in the Train Register Book the times that: -

W212/W205 signal is cleared for an inward movement

The shunter or driver confirms that the inward movement is in clear at Tinsley Yard complete with tail lamp

W227 is cleared for an outward movement

Dated: 15/09/12

LN809 - SHEPCOTE LANE WEST JN TO TINSLEY YARD EAST END**Tinsley Avesta LC (TMO) (B)**

The crossing operates so far as a train Driver is concerned as shown in the Rule Book module TW8 sections 4.1 and 4.2 and not section 9.

Operation of the crossing is by means of control wires which are at cab height on the left hand side of the line on the approach to the crossing from either direction. The Driver must pull the control wire to initiate the lowering sequence of the barriers. Releasing the wire and pulling it a second time will stop the lowering sequence and pulling it a third time will restart the lowering sequence. After the train has passed completely over the crossing, the barriers will rise automatically.

If the street lighting is working correctly, it will not be necessary to apply the provisions of the Rule Book Module TW8, Section 4.5 in the event of a failure of the crossing during darkness.

If it is necessary to make a propelled movement towards the crossing at the Tinsley end, the Shunter controlling the movement must ensure that the movement does not pass the STOP board. ***Shunting over the crossing is prohibited.***

Sheffield Tram Transfer Line/Up Tinsley Down

TS11 Failure of signalling equipment

During failure of MC, MD, AT, AV or AW axle counter sections affecting Tram Train services, Tram Train vehicles may be allowed to proceed in one direction only on the Tinsley Chord in order to clear Network Rail infrastructure, as per regulation P2 / 1.2 Exceptions for single lines.

Dated: 06/05/18

LN814 - TINSLEY NORTH JUNCTION TO SHEFFIELD TRANSFER LINE

Sheffield Tram Transfer Line

Instructions To Train Crews And Other Persons Concerned Working On Network Rail Lines Used By South Yorkshire P.T.E. Supertram Tram Train Services

Supertram Tram Train services operate over the Sheffield Tram Transfer Line. No other rolling stock is permitted to enter the Sheffield Tram Transfer Line except W6A gauge yellow plant for the purposes of conducting engineering work and light engines assisting failed Class 399 Tram Train vehicles.

The Sheffield Tram Transfer Line is electrified at 750V DC overhead and must be regarded as live at all times. The provisions of Rule Book Module AC must be observed as far as is practicable. The overhead line equipment up to 0m 20ch on the Sheffield Tram Transfer Line is controlled by the Electrical Control at York. Beyond 0m 20ch the overhead line equipment is controlled by the Supertram Power Controller at Nunnery Depot. Any incident affecting the overhead line equipment in the vicinity of the Sheffield Tram Transfer Line must be reported to the Electrical Control Operator at York (Int. 037 5622 Ext. 01904 525622) in the first instance, who will relay information to the Supertram Power Controller at Nunnery Depot. The Supertram Power Controller can be contacted directly on the following number 0114 2 798126 if required.

The boundary between electrical controls is located at 0m 20ch on the Sheffield Tram Transfer Line. Staff taking isolation of overhead line infrastructure on the Sheffield Tram Transfer Line must be trained in the specific requirements and instructions associated with the 750V DC overhead system and any supplementary procedures.

Class 399 Tram Train vehicles have a different profile to standard train vehicles and lack front yellow warning panels. The vehicle lighting is also non-standard incorporating lower intensity headlights and orange sidelights below sole bar level. The vehicle employs an electronic horn which has a different tone to a regular air horn. Train crews and persons working lineside should note the above differences between Tram Train vehicles and standard rolling stock.

Hazard Warning Lights

The Class 399 Hazard Warning light arrangement is non-standard incorporating flashing orange indicator lights and orange side lights in tandem with flashing headlights, but at a lower frequency. Train crews and persons working lineside should note this difference from standard rolling stock for identifying a Tram Train vehicle in potential distress.

LN830 - ALDWARKE JN TO WOODBURN JN**Tinsley South Jn to Parkgate Jn****Recovery of Vehicles Requiring Wheel Skates**

The operation of vehicles fitted with wheel skates is not permitted between Tinsley South Jn (2m 22ch) and Parkgate Jn (5m 59ch) due to the presence of raised check rails. Where a vehicle develops a wheel flat between the above locations arrangements must be made to recover the vehicle without a wheel skate. If the wheel flat is severe enough to prevent free running of the affected axle the movement must be made at extreme caution. The affected section of line must be inspected by a competent track maintenance engineer before normal running may resume. Any deviation from the above method of work must first be authorised by Network Rail Control. Any vehicle fitted with a wheel skate booked to travel between Parkgate Junction and Tinsley South Junction must be diverted via alternative route.

Dated: 05/02/2018**LN830 - ALDWARKE JN TO WOODBURN JN****Tinsley South Jn to Woodburn Jn SB****Instructions To Traincrews And Other Persons Concerned Working On Network Rail Lines Adjacent To South Yorkshire P.T.E. Supertram**

Supertram lines run adjacent to Network Rail lines at the following location:-

- Between Tinsley South Jn and Woodburn Jn

Except where clearances are inadequate, a fence is provided between Network Rail lines and Supertram lines.

Supertram lines are electrified at 750v DC overhead and the equipment must be regarded as alive at all times. The provisions of Rule Book Module AC must be observed as far as is practicable; reference to the Electrical Control Room or Electrical Control Operator must be taken to refer to the Supertram Electrical Power Controller.

If anything unsafe is observed or an emergency arises where it is necessary to stop or restrict in any way traffic on the Supertram line, the Signaller at Woodburn Jn. SB Int 03 37345 Ext 01142 755506. If it would be quicker to do so, the Supertram control (tel.no.Sheffield (0114 2798128) must first be informed direct.

Except at Meadowhall, Supertram lines are not signalled and track circuit operating clips must not be relied upon to stop a Supertram train in an emergency. If circumstances arise which require isolation of the overhead line equipment, the Supertram Authorised Person will issue a Permit to Work.

Engineering work which requires the opposite/adjoining line to be blocked or protected must not normally be carried out on lines which adjoin the Supertram line unless preplanned. In an emergency, work must not start until an assurance has been obtained from the Signaller that the Supertram line has been blocked or arrangements for its protection have been agreed and are in place.

Persons who work on Network Rail lines must not go onto the Supertram except in emergency or when authorised to do so. Supertram staff who are trained in personal track safety will carry a SYPTE Supertram Track Access Pass and may come onto adjacent Network Rail lines when necessary.

Dated: 02/05/16**LN830 - ALDWARKE JN TO WOODBURN JN****Tinsley South Jn to Broughton Lane Jn****Working of trains into Tinsley Yard**

The Woodburn Junction Signaller must contact the Tinsley Yard Shunter to obtain permission for a train to proceed towards Tinsley Avesta TMO Level crossing stop board, before setting the route from W205 signal to W226 signal. W226 signal position prevents a freight train from stopping at the signal due to a steep rising gradient on approach; therefore an aspect control has been applied to W205 to prevent the route up to W226 signal from clearing unless W226 signal is off. Confirmation from the shunter or driver that the movement in is clear at Tinsley Yard complete with tail lamp is not required.

The Woodburn Junction Signaller must contact the Tinsley Yard Shunter to obtain permission for a train to proceed towards Tinsley Avesta TMO Level crossing stop board, before setting the route from W212 signal to W228 signal. Confirmation from the shunter or driver that the movement in is clear at Tinsley Yard complete with tail lamp is not required.

Royal Oak Farm (UWC)		42 33 *	<p>The diagram illustrates the running lines and speed restrictions for the route between Filey Jn and Seamer West Jn. It shows two parallel tracks. The top track is labeled 'UB' (Up Bridlington) and the bottom track is labeled 'DB' (Down Bridlington). At the top, there are speed limits of 10 and 60. Below this, there are speed limits of 40 and 55. Further down, there are speed limits of 40 and 60. At the bottom, there are speed limits of 40 and 50. The diagram also shows a 'D/UB' (Down & Up Bridlington) section at the bottom with speed limits of 30 and 50. A legend indicates that an upward arrow represents 'Up Direction' and a downward arrow represents 'Down Direction'. There are also symbols for 'X30' and 'T' (T-intersection) and a GSM-R symbol.</p>		TCB RA6	Seamer SB (SR)	GSM-R

LN724 - HOLGATE JN. TO SKELTON JN.**Holgate Jn To Skelton Jn****York Yard North Sidings / Klondyke Yard / Turntable**

Before proceeding towards No1 Independent siding / Turntable, the traincrew must have the necessary competence to operate the equipment. York ROC, York North Workstation signaller may signal a train into the area providing they have assurance that no conflicting moves have been authorised.

The person in charge of train movements in the siding is responsible for authorising train movements within the siding and up to the "Stop Await Instructions" departure board. A movement may only be authorised to pass a stop board providing no conflicting movement has been authorised or signalled.

No vehicles must be left stabled on No.1 Independent siding or the turntable area.

Dated: 20/07/19

LN836 - DONCASTER, MARSHGATE JN TO NEVILLE HILL EAST JN**Balne Lane To Copley Hill West Jn.****Single Line Working over the Up Doncaster line - Rule Book Module P1**

When Single Line Working is in operation over the Up Doncaster line, it will not be necessary to appoint a Handsignaller for Down direction trains. Drivers of Down direction trains must be instructed by the Pilotman to obey signal L3597. Rule Book, Module P1, Section 3.5a) and Section 6.2a) are modified accordingly.

Drivers of Up trains may be authorised to proceed without being accompanied by the Pilotman. Section 7.1 is modified accordingly.

The above arrangements are applicable in all weather conditions.

Dated: 02/12/06

LN836 - DONCASTER, MARSHGATE JN TO NEVILLE HILL EAST JN**Leeds West Jn****Signal Passed at Danger (SpaD) Indicators**

Drivers MUST STOP if they see a SpaD indicator illuminated irrespective of whether or not the indication applies to the line on which they are traveling, unless they have been given authority to pass it by the Signaller on the Leeds West Workstation, at York ROC.

SpaD indicators are provided in advance of the following signals:-

Signal Number		Location
L3642)	One Indicator for both lines	Leeds West Jn B Line Up direction
L3640)		Leeds West Jn C Line Up direction
L3638		Leeds West Jn D Line Up direction
L3636		Leeds West Jn E Line Up direction
L3634		Leeds West Jn F Line Up direction

Dated: 27/12/18

LN836 - DONCASTER, MARSHGATE JN TO NEVILLE HILL EAST JN LEEDS To Ardsley Tunnel

All Train Operator Companies Controls **must** advise Network Rail Control of the following trains which are to proceed from Leeds station towards Wakefield Westgate:

1. A 225 train formed of 2 class 91s with one loco dead (double headed or top and tailed)
2. A class 91 on 3 traction motors
3. A Class 253/254 train with one power car shut down and unassisted, or assisted by a locomotive of less than 1470 h.p.

If any of the above apply, Network Rail Control will advise you of the circumstances.

On receipt of such advice, the Signaller at York must not clear the signal at the end of the platform concerned until it has been ascertained that the route is clear to signal L208.

The clearing of the signal at the end of the platform in these circumstances is no guarantee that the route will remain clear throughout, and the Driver must continue to observe and obey all signals.

Where possible, signallers should avoid bringing the train to a stand at L3606. This is to prevent the risk of stalling on the incline and/or operating the locomotive safeset equipment, when starting away.

Dated: 27/12/18

LN836 - DONCASTER, MARSHGATE JN TO NEVILLE HILL EAST JN LEEDS

Between Leeds And Bradford Forster Square

When a Class 225 train for Bradford Forster Square is in reverse formation from Leeds (ie 91 loco leading), the Driver must advise the Signaller at York before departure from Leeds.

Dated: 02/12/06

LN836 - DONCASTER, MARSHGATE JN TO NEVILLE HILL EAST JN Neville Hill Depot

Protection System: Reception Sidings 1, 2, 3, 4

Equipment

Double sided boards are located on each siding at both the West and the East End. Each board is capable of displaying a white or red light.

Method of working

When a Red light is displayed on the entrance or exit from a Reception siding, no rail movement may be made to or from that Reception siding.

When a White light is displayed movements may be made to or from that Reception siding.

All movements which are made to or from a Reception siding must have the authority of the West End Console Operator. This information may be conveyed by a Shunter.

Dated: 02/12/06

LN836 - DONCASTER, MARSHGATE JN TO NEVILLE HILL EAST JN

Neville Hill Depot

Arrivals

The normal route for trains arriving at the West End of the depot will be by the Depot Arrival Line.

When a train is routed from the Down Hull Main through the facing connection (2317 points) to the Departure Sidings it must be brought to a stand at the West End Console Cabin from where it will be accompanied by a Shunter until completion of the movement.

Departures

Normal departure of trains will be at the West End of the depot by the clearance of Position Light Signal L779 with an appropriate indication (M= Up Hull Main, G= Up Hull Goods Line).

On receiving Authority for departure from the West End Console Operator (Or Shunter) the movement will proceed towards the STOP board located on the approach to Position Light Signal L779 and act in accordance with the instructions displayed, (Proceed When L779 Signal is clear). A contact number for the West End Console is also displayed.

Departures from the East End of the depot may be made via the Ground Frame and will be accompanied by a Shunter. Before such a move is made, staff involved must come to a clear understanding with the Signaller at York IECC (Leeds East Workstation) as to what is required. Permission to approach the Ground Frame must be obtained from the West End Console Operator.

Depot Speeds

The Depot speed limit is **5 mph** excluding the following locations within the depot:-

- a) Fuel Shed **3 mph**
- b) Underframe cleaning **3 mph**
- c) Washer plant **3 mph**

Dated: 02/12/06

LN836 - DONCASTER, MARSHGATE JN TO NEVILLE HILL EAST JN

Neville Hill Up Sidings

Up Sidings. Trains arriving on the Up Sidings Arrival Line from the West must proceed to the notice board at the East end, worded "STOP, PROCEED IF LINE CLEAR".

When the person in charge is not on duty at the sidings, the Guard, or in the case of a light locomotive, the Driver, must advise the Signaller at York ROC Leeds East Workstation when the train or locomotive on the Up Side Arrival Line has been cleared from that line.

Movements along the Up Sidings Arrival Line from East to West are prohibited unless permission of the Signaller at York ROC Leeds East Workstation has been obtained.

Dated: 28/12/18

LN836 - DONCASTER, MARSHGATE JN TO NEVILLE HILL EAST JN

Marsh Lane Jn. To Neville Hill West Jn.

Single Line Working when the Down Hull Main line and Down Hull Goods Loop are blocked.

When both Down lines are blocked, Down trains must be worked as follows:

- they must be signalled using the bi-directional signalling from Quarry Hill Jn over the Up Hull Main line to signal L188.
- a Pilotman must be appointed, and remain at signal L188 to authorise trains to proceed over the Up Hull Goods line and pass signal L190 (the Limit of Shunt) and proceed to and observe ground position light signal L775. A Handsignaller will not be appointed opposite signal L773 due to restricted clearances.

Dated: 02/12/06

LN836 - DONCASTER, MARSHGATE JN TO NEVILLE HILL EAST JN

Neville Hill West Jn.

Up Arrival Line

Vehicles must not be stabled on the Up Arrival Line.

Dated: 02/12/06**LN838 - LEEDS ARMLEY JN. TO YORK SKELTON JN. VIA HARROGATE****Bramhope Tunnel**

There are four shafts in Bramhope Tunnel and these are numbered 1, 2, 3 and 4, with metal plates fixed flat against the wall at the shafts, commencing from the Weeton end.

Telephones are provided at Nos. 1, 2, 3 and 4 shafts (Nos. 1 and 2 telephones being 634 yards and 1,348 yards respectively, from the Weeton end, and Nos. 3 and 4, 1,747 yards and 1,080 yards respectively, from the Horsforth end). **All Telephones are in the shafts** on the Up side of the line. Telephones are also provided at each end of the tunnel providing communication with Harrogate Signal Box.

They are located as follows :-

- Horsforth end outside tunnel on the Up side.
- Weeton end outside tunnel on the Up side.

Dated: 03/11/12**LN838 - LEEDS ARMLEY JN. TO YORK SKELTON JN. VIA HARROGATE****PANNAL**

Drivers of Up stopping trains at Pannal must not sound the warning horn at the Whistle Board located on the Leeds (departure) side of the station.

Drivers of non-stopping Up trains must continue to observe the Whistle Board.

Dated: 02/12/06**LN838 - LEEDS ARMLEY JN. TO YORK SKELTON JN. VIA HARROGATE****HORNBEAM PARK**

When a train comes to a stand at either the Down or Up Platform at Hornbeam Park Station, the Driver must not leave his cab except in accordance with the Rules or in an emergency. In such circumstances when the train is formed by a Diesel Mechanical Multiple Unit (Class 101 to 128) the hand brake must be fully applied.

Dated: 02/12/06

LN838 - LEEDS ARMLEY JN. TO YORK SKELTON JN. VIA HARROGATE HARROGATE

Trains from Leeds direction calling at or terminating at Harrogate Station.

When a terminating Kings Cross to Harrogate train is routed to Platform No.1, signal 57 will be cleared to allow the train to be brought to a stand at the appropriate Stop Car Marker Board. The Driver must understand that the clearance of signal 57 only indicates that the line is clear to signal 56.

Shunting movements involving 80x units & Method of Working

This instruction does not apply to Class 80x 10 car units unless a second driver is available to take control of the train. Rear Clear Stop Car Marker Boards (9 and 10) are located at the following locations to assist with shunting movements.

SIGN ID	LINE	DIRECTION	MILES & CHAINS	SIGN DETAIL (Train Class & applicable length)
LEH3UH1675U	UP HARROGATE	UP DIRECTION	16m 75ch	80X 10
LEH3UH1676U	UP HARROGATE	UP DIRECTION	16m 76ch	80X 9
HAY2DS2010U	DOWN SIDING	UP DIRECTION	20m 10ch	80X 9
HAY2DS2009U	DOWN SIDING	UP DIRECTION	20m 09ch	80X 10
HAY2UY2005U	UP YORK	UP DIRECTION	20m 05ch	80X 9
HAY2UY2003U	UP YORK	UP DIRECTION	20m 03ch	80X 10

Preferred Method of Working for shunting movements involving 80x units towards Leeds on the Up Harrogate

- A train enters Harrogate Station on the Down Harrogate from H64 signal.
- The train unloads passengers on Platform 1, as the trains are overlength the signaller must clear H57 signal to allow the trains to move up to existing stop car markers (9 or 10) so the train fits behind H26.
- The driver swaps end (9 car) or the second driver takes control of the train (10 car).
- The signaller routes the train onto the Up Harrogate (H26 to LH4138 via H61 points)
- Only when LH4138 displays a proceed aspect, the train can proceed up to new rear clear markers (9 or 10) enabling the train to fit behind H63 PLS.
- The driver swaps end (9 car) or the first driver takes control of the train (10 car).
- H63 and H32 PLS are cleared by the signaller, and the train is routed into the Down Siding.
- The train is stabled in the Down Siding.
- To continue to Leeds, the Signaller will clear H30 towards H24 signal.
- The train is signalled back to Leeds on the Up Harrogate.

Non-preferred Method of Working for Shunting movements involving 80x units towards Starbeck on the Up York

- A train enters Harrogate Station on the Down Harrogate from H64 signal.
- The train unloads passengers on Platform 1, as the trains are overlength the signaller must clear H57 signal to allow the trains to move up to existing stop car markers (9 or 10) so the train fits behind H26.
- As the train has already passed H57 at a proceed aspect, once the passengers are unloaded, the first driver continues onto the Up York until H56.
- When shunting into forward section has been sent and acknowledged by Starbeck signal box H56 can be cleared into the block section towards Starbeck, the train then proceeds up to the new rear clear markers (9 or 10). The signaller replaces H56.
- The driver swaps end (9 car) or the second driver takes control (10 car).
- H51 shunt signal is cleared by the signaller, and the train is routed via H23 into Platform 3, up to H24.
- When the train is confirmed clear of the AB section complete with tail lamp, shunt withdrawn to be sent and acknowledged by Starbeck signal box
- The driver swaps end (9 car) or the first driver takes control (10 car).
- H32 PLS is cleared by the signaller, and the train is routed into the Down Siding.
- The train is stabled in the Down Siding.
- To continue to Leeds the Signaller will clear H30 PLS towards H24 signal.

The train is signalled back to Leeds on the Up Harrogate.

Stabling of Trains or vehicles on the Through Road.

1.Trains may be stabled on the Through Road between signals 59 and 25.

2.The following conditions must be observed:-

- a) During darkness, fog or falling snow, lamps exhibiting red lights must be placed on the outer ends of the stabled vehicles.
- b) When a movement is required to enter the line towards the stabled vehicles for any purpose, the Driver must be instructed to proceed forward cautiously.

No.1 Platform - Signal H26

If the Driver of a train standing at signal H26 needs to speak to the Signaller, he should do so from the telephone on No.1 Platform.

White Lining of Platform Edges

White lining of platform edges at Harrogate must only be done under Rulebook Module TS1.13 Handbook 8 or Handbook 21.

Dated: 26/10/19

**LN838 - LEEDS ARMLEY JN. TO YORK SKELTON JN. VIA HARROGATE
HORSFORTH TURNBACK SIDING**

Use of the turn-back facility is limited to the following types of unit: Class 142, 144, 150, 153, 155, 156, 158, 159, 170, 171 and 172.

Stabling is not permitted within the Horsforth Turnback siding. The driver shall only leave the driving cab for the purposes of changing ends and where possible shall remain on the train during this process. No train shall be left unattended.

**LN838 - LEEDS ARMLEY JN. TO YORK SKELTON JN. VIA HARROGATE
KNARESBOROUGH**

The Signaller at Knaresborough has authority to clear the Up Home signal, before a train booked to stop or terminate at Knaresborough, is close to such signal, although the next stop signal may be at danger.

Dated: 28/12/18

**LN838 - LEEDS ARMLEY JN. TO YORK SKELTON JN. VIA HARROGATE
KNARESBOROUGH****Dividing of Trains**

Where specified in the Working Timetable, an Up train may be divided in the Up platform, with the front portion going on to York and the rear portion remaining at Knaresborough to form a service back towards Leeds.

Two train crews will be provided.

Once the train has been divided, the front portion will attach a tail lamp, and provided the driver has the token and the train has been signalled to Cattal, it may then go forward.

If the rear portion needs to draw forward towards the tunnel to clear the crossover, this movement must not be made until the front portion has passed K2 signal and it has been authorised by the signaller at Knaresborough SB.

Rule Book Module P2, Section 7: Modified Working Arrangements on Single Lines

If the signalling system fails & a Pilotman is not immediately available, provided the authority of the Responsible Person is obtained, Modified Working Arrangements may be introduced between Knaresborough & Cattal.

When the Responsible Person has authorised introduction of the arrangements to allow a train to proceed without being accompanied by a Pilotman in accordance with the requirements of Rule Book Module P2, Section 7 the Signaller will:-

- Tell the driver what is happening
- Dictate or hand, as appropriate, form RT3177 to the Driver
- Give the driver any necessary instructions regarding the operation of level crossings
- Instruct the driver to pass the signal at danger, as shown in Part A of module S5 Passing a signal danger

The Responsible Person must authorise the Modified Working Arrangements for each train to pass through the single line block section.

Working by Pilotman, as shown in Module P2, must be introduced as quickly as possible. The changeover to Working by Pilotman must be authorised by the Responsible Person.

Dated: 07/12/13

LN852 - HOLBECK JN. TO BRADFORD INTERCHANGE BRADFORD INTERCHANGE

Loco-hauled train running round

The maximum number of coaching stock vehicles running round is 9.

Platform 1

Passing MM6261 and MM6251 at danger

If a failure requires MM6261 and MM6251 to be passed at danger, authority to pass both signals can be granted with a single instruction from MM6261. Both MM6261 and MM6251 are fitted with TPWS.

Platform 1 and 3 lines

If the Driver of a train standing at signal M1578 on No.1 Platform line or signal M1576 on No.3 Platform line needs to speak to the Signaller, he should do so from the telephone on the end of the respective platform.

Platform 3

Freight trains are prohibited from being routed into Platform 3 except during a T3 possession. This is due to the reduced slide length of the buffer stop design.

If Freight trains are to be routed into Platform 3 under this restriction they must have a locomotive at both ends.

Stabling Siding

When train crew require access to or from the platform side of a train in the Stabling Siding, arrangements should be made with the Signaller at Mill Lane to block Platform 4 line. When all personnel are in a position of safety, the signaller must be advised immediately.

Engine Release Line

When train crew require access to or from the platform side of a train in the Engine Release Line, arrangements should be made with the Signaller at Mill Lane to block Platform 1 line. When all personnel are in a position of safety, the signaller must be advised immediately.

Drivers of trains routed onto the Engine Release Line should exercise particular care in controlling the movement on the falling gradient. Stop blocks are not provided at the end of this line.

LN854 Hall Royd Jn. To Colton Jn.

Colton South Junction to Church Fenton

ELR = NOC

The Transpennine Route Upgrade East (TRUe) Project will be undertaking signal renewals on the Up and Down Leeds Lines and Up and Down Normanton Lines between Colton Jn and Church Fenton (ELR: NOC Route: LNE).

The area of the works is between 10m 00ch (ELR: NOC) to 6m 20ch (ELR: NOC).

The proposed work is to replace 16 existing Signal posts with fold down LED lit signals.

The following signals have been included within a signal box special instruction (SBSI) to prohibit the use of hand signallers:

CF724 (9M 74CH), CF736 (9M 07CH), CF742 (8M 23CH), Y746 (7M 42CH) and Y752 (6M 73CH) on the Up Leeds.

CF733 (9M 60CH), Y737 (9M 08CH), Y743 (8M 24CH) and Y747 (7M 43CH) on the Down Normanton.

Dated: 27/12/2021

LN860 - DIGGLE JN. TO COPLEY HILL EAST JN.

Standedge Tunnel

No vehicle with a diameter of less than 14 inches (350mm), vehicle on a wheelskate or road/rail vehicle may be placed on or run over the Down or Up line through Standedge Tunnel without the Signaller's authority. This instruction must also be applied when the line is under Possession.

Emergency telephones connected to Huddersfield Workstation are installed at four points in the former Down Slow tunnel, the single bore immediately adjacent (Up side) to the double line running tunnel. The telephones are attached to S&T location cabinets and are not illuminated.

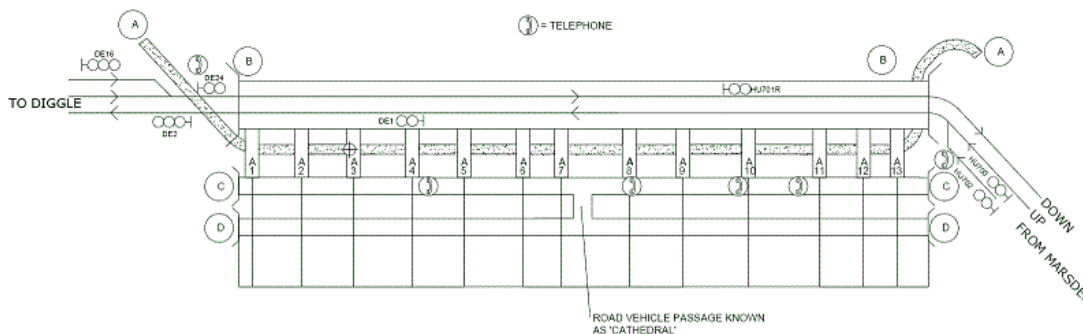

Access to the single bore tunnel can be obtained through cross passages and only the cross passages indicated below may be used. These have a reflective sign showing a white telephone on a blue background. In addition, there are numbered tablets along the wall of the running tunnel to assist in identifying where you are.

Other cross passages may not be safe to use and must not be used, some have vertical holes leading down into the canal tunnel, which is at a lower level.

The locations of the telephones are as follows:

<u>Phone number</u>	<u>Mileage</u>	<u>Nearest tablet number to safe cross passage</u>
(Marsden end)		
1	17m 58ch	270
2	17m 32ch	237
3	16m 69ch	181
4	15m 75ch	81

(Diggle end)

- A** CANAL TUNNEL. Lower than rail tunnels. Cross passages 1 - 12 pass over the canal. All water in tunnel drains via the canal.
- B** DOUBLE RAIL BORE (North Bore). Straight except for curve at Marsden end. Access to Nicholson bore via 13 cross passages (A1 to A13).
- C** NICOLSON BORE (Centre Bore). Access gates padlocked. Access to double bore via 13 cross passages, or via vehicle cross passage known as the "Cathedral". Straight throughout.
- D** NELSON BORE (South Bore). Access gates padlocked. Access to double bore via 13 cross passages, or via vehicle cross passage known as the "Cathedral". Straight throughout.

Line not normally in use. Trains may only run when authorised by the Route Director Network Rail London North Eastern.

Dated: 02/12/06**LN872 - ALTOFTS JN TO LEEDS WEST JN****Holbeck Depot**

When a movement onto the depot has come to a stand at the entrance "STOP Await Instructions" board, the Driver must use the telephone provided to report to the Signaller when the movement is inside clear of the main line complete with tail lamp. Between 21.00 and 07.00 you must then use the second telephone located at the entrance Stop Board to contact the Designated Person to obtain instructions as to where the Train/OTM should be stabled. **No movement will take place until you have gained permission to proceed from the Designated Person.**

Between the hours of 07.00 and 21.00.

- Between the hours of 07.00 and 21.00, the person in charge of train movements is any Driver or Competent Person operating on the Service Point. The Driver/ Competent Person may then proceed into the service point under his own authority after contacting the signaller to confirm their arrival. If a temporary STOP BOARD is present that prevents your intended movement. You must contact the DP responsible to arrange for removal of the STOP BOARD. NOTE – only the responsible DP is permitted to remove this protection.
- When proceeding to the sidings, you must always check for portable STOP BOARDS placed in the four-foot.
- The driver or competent person must set and check all facing and trailing hand points are correctly fitting for the intended movement. This check must be carried out from the ground.

Movements from the depot, including shunting movements, must not proceed beyond the exit "STOP and telephone" board until the Signaller's permission has been given.

Dated: 16/08/08

LN880 - YORK TO SCARBOROUGH**MALTON****Down trains terminating or delayed at Malton Station.**

Whenever a Down train arrives and terminates or is unduly delayed at Malton Station awaiting departure, the Guard must communicate with the Signaller at Malton SB by means of the platform telephone and confirm the train is complete with tail lamp attached.

When single line working is in operation over the Up Scarborough line, it will not be necessary to appoint a handsignaller for Down direction trains. Drivers of Down direction trains must be instructed by the pilotman to obey signal YS6193.

Rule Book module P1 sections 3.5a) and 6.2a) are modified accordingly.

Drivers of Down trains may be authorised to proceed without being accompanied by the pilotman.

The above arrangements are applicable in all weather conditions.

Dated: 01/11/10**LN880 - YORK TO SCARBOROUGH****SEAMER****Up Sidings**

Due to there being no standard 10 foot clearance between the Up Main and Up Sidings No. 1 only Up Siding No. 2, furthest away from the Up Main, must be used for stabling of trains including Engineering Trains and On Track machines. Up Siding No. 1, nearest to the Up Main, must only be used for run-round movements. No person must walk along the side of a train/vehicle standing on Up siding No. 1 unless the Up Main line has been closed to traffic.

Dated: 02/12/06**LN880 – YORK TO SCARBOROUGH****SCARBOROUGH****Excursion Sidings**

Due to there being restricted clearance between the Excursion Siding No.1 and the Down Scarborough line, Excursion Siding No.1 must not be used for stabling of trains including Engineering Trains and On Track machines, and must only be used for run-round movements. No person must walk along the side of a train/vehicle standing on Excursion Siding No.1 unless the Down Scarborough line has been closed to traffic.

Dated: 01/11/10**LN880 – YORK TO SCARBOROUGH****SCARBOROUGH****Down Excursion Sidings**

Before proceeding towards the sidings, the traincrew must advise the signaller that they are in possession of the turntable equipment (if required) from the locked cabinet on platform 1.

Before a second train is authorised to depart from signal YS6198 towards the Excursion sidings, the person in charge of the train movement already in the sidings must give permission to the signaller for the second train to enter the siding.

The person in charge of train movements in the siding is responsible for authorising train movements to pass the "Stop Await Instructions" boards (YS6187, YS6195, YS6197).

Dated: 01/11/10

LN880 – YORK TO SCARBOROUGH

SCARBOROUGH

STAFF PROTECTION SYSTEMS (LOCKOUT)

In addition to the general section on staff protection systems (lockout) in this publication the following instruction should be applied at Scarborough Station: - When a "Not to be Moved" board needs to be used, it must be securely fitted to the Driver's cab in such a position that it is clearly visible to the Driver of the train as well as being visible along the platforms.

Dated: 06/12/14

LN880 - YORK TO SCARBOROUGH

Scarborough Down Excursion Sidings, Turntable Siding and Scarborough Train Care Depot

PiCoTM taking charge

The Person in Charge of Train Movements (PiCoTM) must, having ensured the status of the sidings, contact the Signaller prior to allowing any movement to approach from the station to the Excursion Sidings and reach a clear understanding with the Signaller regarding their name, company they are representing, contact details and any movements required between the Excursion Sidings and Scarborough Station,

The PiCoTM will advise the Signaller that they are in possession of the turntable equipment (if required) from the locked cabinet on Platform 1.

Due to there being restricted clearance between the Excursion Siding No.1 and the Down Scarborough line, Excursion Siding No.1 must only be used for run-round movements. It must not be used for stabling of trains including Engineering Trains and On Track machines. No person must walk along the side of a train/vehicle standing on Excursion Siding No.1 unless the Down Scarborough line has been closed to traffic.

Trains Arriving from Scarborough Station platform 1 towards Excursion Sidings

Before a train is authorised to depart from signal YS6198 towards the Excursion sidings, the (PiCoTM) must give permission to the Signaller for the train to enter the Excursion Sidings.

Once the train movement has passed beyond Signal YS6198 all movements will be made under the authority of the PiCoTM. The exception to this is any movement requiring to proceed beyond Ground position Signal YS6199 towards Scarborough Station.

The PiCoTM is responsible for ensuring that all hand points are correctly set in the direction of movement for the train, and for authorising train movements passed Stop Boards within the Excursion Sidings and proceeding to/from the Scarborough Train Care Depot.

Trains Departing Excursion Sidings to proceed to Scarborough Station platform 1

The PiCoTM will contact the Signaller to advise a train is ready to depart from the Excursion Sidings to proceed to Scarborough Station platform 1, the train reporting number and any other requirements that may be applicable to the move.

The PiCoTM will ensure ensures that all hand points are set correctly for the movement and authorise the movement to proceed towards Ground Position Signal YS6199 providing the signaller has given permission for this movement to take place.

The PiCoTM will not authorise any train movements passed Ground Position Signal YS6199.

The Driver will register the train's reporting number into the train's GSMR at Ground Position Signal YS6199 and obey signal YS6199;

Stop Boards are located within Excursion Sidings at 41m 50ch and read in the Down direction:

Stop Board YS6195 at the station end of Excursion Siding 1

Stop Board YS6197 at the station end of Excursion Siding 2

Movements Within Scarborough Train Care Depot

The Depot Operator for Scarborough Train Care Depot is responsible for controlling train movements within the Scarborough Train Care Depot.

Change of PiCoTM

In the event of a PiCoTM on duty requiring to handover to another PiCoTM (for example shift change), then the following steps apply: -

The PiCoTM leaving duty will advise the new PiCoTM of the location of the Turntable Equipment Key and hand it over (if required)

The PiCoTM leaving duty will advise the new PiCoTM of the current status of the Excursion Sidings (for example, any trains / rail vehicles stabled within the Excursion Sidings, any defective infrastructure such as sidings / points out of use or other such operating restrictions), and shall reach a clear understanding of any other relevant information;

London North Eastern Route Sectional Appendix Module LN7

The PiCoTM being relieved will contact the signaller and advise that they are handing control of the Excursion Sidings (including the Turntable Siding, and the Scarborough Train Care Depot Siding) over to a new PiCoTM;

The new PiCoTM must inform the Signaller of their name, the company that they are representing, and provide their contact details;

Handback from PiCoTM to Signaller

The PiCoTM will ensure that the Turntable Equipment Key has been returned to the cabinet on Platform 1 at Scarborough Station if previously required;

When all movements have been completed the PiCoTM will advise the signaller of the current status of the Excursion Sidings any relevant safety information;

Additional Information

Each Railway Undertaking is to have their own Method of Work for controlling train movements within the Excursion Sidings.

The Signaller will report any Network Rail related infrastructure faults in accordance to Network Rail fault reporting processes.

Stop Board YS6187 beyond Scarborough Train Care Depot Train Gates and on the approach to Excursion sidings 1 & 2

Goole Bridge

Down Direction Trains approaching Goole Bridge

If a train is or will be detained in the Down platform at Goole Station and unable to complete station duties within the normal timescale or if a train is otherwise detained between signal G53 and GB1 signal, the Driver must telephone Goole Bridge signal box (03-62848) immediately and advise the Signaller of the circumstances. This will enable the Signaller to make the most appropriate arrangements with regard to opening the bridge to shipping.

Trains unable to start when signal GB2 or GB3 is cleared

If a train is stopped at signal GB2 or GB3 at Danger and is unable to restart when a proceed aspect is displayed, the Driver must telephone the Signaller immediately and advise him of the circumstances.

Access to the Bridge

Persons requiring to walk from the Hook Road Access point to the West end of the bridge, or to visit the bridge, or to walk across the bridge, must telephone the Signaller to request traffic movements over the Down line to be stopped.

The person requesting protection must give his/her name and employer and indicate his/their destination.

The Signaller must be advised when the person(s) have arrived at their destination.

This procedure also applies when leaving the bridge etc.

Telephones are provided at the East and West ends of the bridge, on the centre jetty and at the Hook Road Access point.

Staff working on the bridge under the supervision of a COSS

Whenever staff are to work on the bridge without an Absolute Possession, and they require the passage of trains to be stopped for their personal safety, the arrangements outlined in Rule Book Module T2 – Protection Procedure T2X (emergency only) must be applied with the following amendments:-

- (i) The arrangements may be used for planned work and maintenance items, in addition to emergencies when the Signaller has called the staff out.
- (ii) The COSS must always attend at the signal box.
- (iii) The Signaller must additionally comply with the Goole Bridge Signal box Special Instructions.

Before admitting a machine to a platform already occupied by a stabled machine the Signaller will instruct the person in charge of the platform to ensure that any staff working or about the stabled machine move to a place of safety and to confirm that they have done so.

An Engineers On Track Machine must be stabled close to the buffers and must not be moved except in accordance with Rule Book Module TW1, Section 20.4.

Dated: 07/12/13

LN914 - HULL (PARAGON) TO SEAMER WEST JN

Hunmanby Station LC (ABCL-X)

Down train on Down line – Additional requirements associated with train lengths.

If it is necessary for a train with a length of more than 105 yards (96 metres) to pass over the crossing in the Down direction on the Down Bridlington line, the crossing must be under local control and the crossing lights switched on before the train is authorised to proceed beyond signal SR123.

Reason for instruction:-

Signal SR125 at the east end of Hunmanby Station is designed not to clear to a proceed aspect until a train has come to a stand at it. The design of the crossing means there is a possibility that the barriers will raise and the lights extinguish before a train with a length of more than 105 yards (96 metres) has passed clear of the crossing. Therefore, when such trains are planned to run over this route, arrangements must be made in advance for the crossing to be placed under local control.

Up train on Up line

Rule Book, Module TW8, Section 4 is modified as follows :-

Because of the junction beyond the crossing, a Distant signal and stop signal are provided on the approach to the crossing instead of a Warning Board, Stop Board and White Flashing Light. An emergency plunger to activate the crossing when signal SR124 has to be passed at Danger is located at the signal.

The normal sequence of signal and crossing operation (which requires all trains to stop) will be as follows :-

- Train arrives in Up platform with signal SR124 at Danger.
- Provided the Signaller has operated the signal for the train to depart, the crossing sequence will commence.
- Signal SR124 will clear to Green when the crossing has operated correctly.
- The train should then be despatched from the platform with the Driver observing Rule Book Module TW8, Section 4.3.
- The crossing cannot 'time out' whilst signal SR124 is displaying a green aspect.

If a train is, or will be, detained in the platform for more than 2 minutes the driver must immediately communicate with the Signaller at Seamer.

If signal SR124 fails to clear it will be necessary to consult the Signaller at Seamer. When authorising Signal SR124 to be passed at Danger, the Signaller will also remind the driver to operate the plunger. This should activate the crossing sequence. When the crossing has operated correctly, the miniature white light adjacent to the plunger will commence to flash. The Driver should advise the Guard that he is ready to be despatched from the platform and then observe Rule Book Module TW8, Section 4.3. The crossing can 'time out' 3 minutes after the plunger has been operated.

If after operating the plunger in accordance with the above paragraph the miniature white light does not commence to flash, the crossing will either have failed or be partially failed e.g. a red road flashing light out and the Driver must act in accordance with the Rule Book Module TW8, Section 4.3b) and 4.5.

Other approaches to the crossing

For an Up train departing from the Down platform, Rule Book Module TW8, Section 4.3 applies except that reference to 'white light adjacent to the crossing' should be read as miniature white light adjacent to the plunger.

For trains in the Down direction, Rule Book Module TW8, Section 4.2 applies except that with reference to Section 4.2c, operation of the plungers on the Down approach will fully initiate the operating sequence and provided that the Driver's White Light is correctly displayed, it will not be necessary to treat the crossing as having failed.

Dated: 02/12/06

LN914 - HULL (PARAGON) TO SEAMER WEST JN

Hunmanby Sands Lane LC (ABCL-X)

Up train on Up line – Additional requirements associated with train lengths

If it is necessary for a train with a length of more than 450 yards (420 metres) to pass over the crossing in the Up direction on the Up Bridlington line, the crossing must be under local control and the attendant advised in sufficient time before the train approaches the crossing.

Reason for instruction:

Signal SR124 at the west end of Hunmanby Station is designed not to clear to a proceed aspect until a train has come to a stand at it. The design of the crossing means there is a possibility that the barriers will raise and the lights extinguish before a train with a length of more than 450 yards (420 metres) has passed clear of the crossing. Therefore, when such trains are planned to run over this route, arrangements must be made in advance for the crossing to be placed under local control.

Hunmanby Sands Lane LC is located at 41m 72 ch and is an ABCL crossing operated automatically by all approaching Up trains and Down trains in the Down direction. Trains are not normally required to stop, as described in the Rule Book Module TW8, Section 4 except as shown below:-

Down trains on the Down line

A plunger is provided on the north end of the Down platform, which is to be used to initiate the operation of the crossing, as follows:

- when instructed to do so by the Signaller, or
- when it is necessary to pass signal SR125 at Danger in accordance with the Rule Book Module S5 or
- if within a Rule Book Module T3 possession, when authorised to pass signal SR125 at Danger by the PICOP, or
- it is necessary to restart the operating sequence of the crossing in circumstances where it has “timed out” when a train is delayed in the platform.

Pressing the plunger will fully initiate the operation of the crossing. A white light indicator is provided adjacent to the plunger, which illuminates to indicate operation of the plunger, but has no other function.

Rule Book Module TW8, Section 4.2

Operation of any of the plungers at this crossing will fully initiate the operating sequence and, provided that the Drivers White Light is correctly displayed, it will not be necessary to treat the crossing as having failed.

Down trains on the Up line

The crossing will NOT work automatically for trains on the Up line in the wrong direction.

A STOP board worded “Operate plunger, wait for white light and whistle before proceeding” together with a plunger is located 54 yards before reaching the Red/White light unit. Operation of the plunger with a train standing at the board will initiate the crossing sequence.

General

The Drivers Red/White light units are duplicated on both sides of the line in both directions, the unit on the left hand side of the line applies to trains running on the correct line and the unit on the right hand side of the line applies to trains running on the wrong line during single line working. When no train is approaching the crossing, all 4 lights flash red. When a train is approaching the crossing, the light on the line and in the direction for which the train is approaching will, when the operating sequence is successfully completed, flash white (the light on the opposite line from the same direction will continue to flash red).

Emergency plungers (Rule Book Module TW8, Section 4.2) are provided in locked cabinets (BR1 key) near the Drivers Red/White light unit at all four corners of the crossing; if it is necessary to make use of these, the one appropriate to the line /direction of travel of the train must be used **(the others will be ineffective as the track circuit must be occupied)**.

Telephones, communicating with Seamer Signal box, are provided on the road traffic signals on the off side of the road in each direction.

FILEY To Seamer South Jn

Rule Book Module P2, Section 7: Modified Working Arrangements on Single Lines

If the signalling system fails & a Pilotman is not immediately available, provided the authority of the Responsible Person is obtained, Modified Working Arrangements may be introduced between Filey & Seamer SoUth Junction.

When the Responsible Person has authorised introduction of the arrangements to allow a train to proceed without being accompanied by a Pilotman in accordance with the requirements of Rule Book Module P2, Section 7 the Signaller will:-

- Tell the driver what is happening
- Dictate or hand, as appropriate, form RT3177 to the Driver
- Give the driver any necessary instructions regarding the operation of level crossings
- Instruct the driver to pass the controlling signal at danger, as shown in Part A of module S5 Passing a signal at danger
- Instruct the driver of an Up train to confirm that the train has arrived at Filey complete with tail lamp

The Responsible Person must authorise the Modified Working Arrangements for each train to pass through the single line block section.

Working by Pilotman, as shown in Module P2, must be introduced as quickly as possible. The changeover to Working by Pilotman must be authorised by the Responsible Person

Dated: 07/12/13

LN922 - WHITEHALL WEST JN TO HELLIFIELD SOUTH JN

Whitehall West Jn To Keighley

Bridge Lockouts Between Whitehall West Jn And Shipley And Platform Lockouts At Shipley And Keighley Stations.

Lockouts are provided which prevent trains being signalled into the sections of line shown below for the protection of staff working on the line. These lockouts are intended only to provide a "Position of safety" as defined in Rule Book, Module G1, Section 6 and Handbook 1 where none would otherwise exist and the use of them does not remove the need to take the appropriate precautions for the safety of staff on or near the line as laid down in the Rules nor must they be used as a substitute for Personalised Rule Book Section Modules T3, TS1 Regulation 13.2, Handbook 8 or Handbook 21.

The lockouts are provided on the following underbridges and prevent trains being signalled on the Down line only, trains will continue to run on the Up line:-

<u>Bridge</u>	<u>Location</u>
28A	199m 9ch
32	200m 19ch
38	Apperley Viaduct
39	203m 15ch
40	203m 29ch

At each bridge, a lockout control box, together with a telephone, is provided at each end. The control boxes are wired together such that the lockout can be taken at one and given up at the other, or taken and given up from the same one. However, each bridge is a totally separate system.

At Shipley station, three systems are provided covering platforms 1 & 2, platforms 3 & 4, and platform 5. These systems prevent trains being signalled on both the lines shown but are totally separate from each other.

At Keighley Station separate systems are provided on the Down and on the Up lines; these are entirely independant and trains will continue to run on the opposite line.

Staff authorised to use the lockouts will be issued with a special key for the control boxes. The control boxes contain three lights, PATROL, FREE and TRAFFIC and two push buttons, PATROL and TRAFFIC. When trains are running normally, the TRAFFIC light only should be lit. Operation is as follows:-

The Signaller referred to below, is located in York ROC, on the Leeds North West Workstation.

To take the lockout, ring the Signaller, give name, grade and department, give your location (ie. bridge number and which end). When the Signaller is in a position to give the lockout (he cannot do so if a train is signalled or any rail vehicle is standing in the lockout section), he will press his button (the FREE light will light in the control box) and tell you to press the PATROL button. When the lockout has been sucessfully given, the TRAFFIC and FREE lights will go out and the PATROL light will light, you should confirm this to the Signaller before going into the section.

To give up the lockout, when all staff are clear of the section, ring the Signaller and give name, grade and department, give your location and confirm that all staff are clear. The Signaller will pull his button and the FREE light will light, you should then press the TRAFFIC button in the control box. The PATROL and FREE lights will go out and the TRAFFIC light will light, confirm to the Signaller that this has happened.

It is essential that the boxes are always locked with both locks to prevent interference. The lockout must always be given back promptly, if it is not, trains cannot be signalled normally and unnecessary delays will result.

ALWAYS ENSURE THAT YOU KNOW EXACTLY WHICH LINES ARE BLOCKED

The Protection given in each of the 3 systems is different.

Single Line Working over the Down Shipley Main line - Rule Book, Module P1

When Single Line Working is in operation over the Down Shipley Main line, it will not be necessary to appoint a Handsignaller for Up direction trains. Drivers of Up direction trains must be instructed by the Pilotman to obey signal L3890. Rule Book, Module P1,

Section 3.5a) and 6.2a) are modified accordingly.

Drivers of Up trains may be authorised to proceed without being accompanied by the Pilotman. Section 7.1 is modified accordingly.

The above arrangements are applicable in all weather conditions.

Dated: 02/12/06

LN922 - WHITEHALL WEST JN TO HELLIFIELD SOUTH JN

Armley Jn To SKIPTON

Train Operated Warning System. Provided continuously from 196m 34ch (Armley Jn) to 221m 13ch (East of Skipton station) in 36 separate sections numbered A1 - 36.

On a double line, each TOWS section covers both lines. The junction areas of branches are part of the main line TOWS section.

Some TOWS sections include places where trains can stand for a short while in stations or may reverse - remember that the Rule Book tells you to **move clear** if the warning continues to sound and no train comes.

Operation of the TOWS system is by means of a special key. Turning a key switch either way will change the state of the system in that TOWS section to the opposite one; if it is on it will go off and if it is off it will go on. The key switches do not have a specific on or off position.

Key switches are normally positioned back to back on a lineside post. These either control parts of the same TOWS section or parts of adjacent TOWS sections. When you turn on the TOWS, you can only turn it off again at either the same switch or the next switch along the line in the correct direction, i.e. if the switch you turned it on by was on the Leeds side of the post, you must use the next switch towards Leeds to turn it off, or vice versa.

If the system is turned on at 2 it can be turned off at 2 or 3 but not at 1 or 4.

These instructions are for your **SAFETY** and supplement those in the Rule Book, they do not replace or change them.

KEIGHLEY

Keighley Down Sidings. The connection between the two sidings is worked by a free ground frame (ie. no key or release is required to operate it). The points are not trailable. Engineers machines may only be stabled in the siding furthest from the main line and the points must then be left towards the other siding.

Dated: 02/12/06

LN922 - WHITEHALL WEST JN TO HELLIFIELD SOUTH JN**KEIGHLEY**

Keighley Station. 99 metres (108.2 yards) at the Leeds end of the Up platform is below standard height. Whenever possible this part of the platform should not be used.

Steam locomotives in steam must not stand under the bridge at the North end of Keighley Station on either of the main lines. The Driver of the train which is to change to steam traction at Keighley must stop the train with due regard to this.

Dated: 28/12/18

LN922 - WHITEHALL WEST JN TO HELLIFIELD SOUTH JN**KEIGHLEY****Keighley And Worth Valley Railway**

The KWVR is connected to Network Rail lines by means of the siding nearest the main line and a derailer, worked from a ground frame, is provided at the boundary on this siding. The ground frame is released from York ROC Leeds North West Workstation and also provided with a facility for the KWVR to fit a padlock to prevent through movements.

If the padlock is on (it will be whenever the KWVR passenger trains are using platform 3), it will be necessary to apply to the KWVR person in charge for it to be removed before a movement can be made.

If the lock is off, and a through movement has previously been arranged with the KWVR, the release may be requested, the ground frame operated to remove the derailer and the agreed movement made. As soon as the movement is complete the ground frame must be operated to put the derailer back on the rail and the release given back to York ROC Leeds North West Workstation.

Drivers should be aware that the KWVR locomotives or vehicles may be in platform 3 and must proceed cautiously. Movements must not proceed beyond the platform unless specifically authorised by the KWVR person in charge.

Through passenger trains may only be run when specially authorised; publication of the timings in a Network Rail publication will be the authority.

Detaching of Cripples. A Down train which activates the Hot Axle Box Detector will be stopped at L.4031 signal for initial examination. If it has to detach cripples, it will be routed via the Down Shipley Fast line and detached vehicles must be placed in the Shunt Spur of the Up Sidings. If there are too many vehicles in front of the cripple, and it is necessary to place vehicles on the Up Shipley Main, such vehicles must be secured by the application of a sufficient number of handbrakes. It may be necessary, after vehicles have been placed in the Shunt Spur, to obtain the Signaller's permission to pass L4553 signal in accordance with Rule Book Module S5.

An Up train which activates the HABD will be stopped for initial examination at L4046 signal. If there are cripples to detach, these must be placed in the Up Sidings.

Rylstone Branch: Any train or locomotive which passes onto the branch must pass completely beyond L4039 signal before returning. Locomotives (only), coupled together if more than one, may be stabled in the platform at Skipton beyond L4039 signal. All locomotives which pass onto the branch at Skipton together must also return together and locomotives must not be left at Rylstone for a later train.

Dated: 10/04/2023

LN922 - WHITEHALL WEST JN TO HELLIFIELD SOUTH JN SKIPTON

Platform Lockouts

Lockouts are provided which prevent trains being signalled into or out of the platforms shown:-

Platform 1	}	
Platform 2	}	Entirely <u>separate</u> systems are
Platform 3	}	provided for each platform.
Platform 4	}	

The protected area does not extend beyond the ends of platforms.

The lockouts must be used to protect staff who are to carry out work such as:-

- watering coaching stock at track level,
- fitters working on trains,
- clearing litter from the track,
- white lining platform edges.

If a lockout has been used, it will not be necessary to appoint a COSS. Where work is to take place on train, or a train is standing in a platform whilst work is in progress, a NOT TO BE MOVED board must be securely fitted to the Drivers cab in such a position that is clearly visible to the Driver of the train as well as being visible along the platform.

Where work is to take place which will involve staff going onto the line in platform 2 or platform 3, **both** platform 2 and platform 3 lockouts must be taken.

The operation of the lockout is as follows:-

The Signaller referred to below, is located in York ROC, on the Leeds North West Workstation.

The person taking the lockout must telephone the Signaller, identify himself by name and employing organisation, say what is to be done and ask for the lockout to be given.

When the Signaller is able to give the lockout, the light on the instrument will light; the button must then be pressed and the key turned and withdrawn. The Signaller must be advised when the key has been withdrawn.

The key must be retained by the person removing it and not left in the instrument cupboard, as long as it is out of the instrument the platforms are protected from train movements by the signalling system.

The same person must normally remain in charge of the key throughout the time it is out of the instrument; if this is not possible, he must, before transferring the key, telephone the Signaller, identify himself by name and employing organisation and tell the Signaller to whom the key is to be transferred; that person must then identify himself by name and employing organisation.

When the work is complete, the person who has charge of the key must telephone the Signaller, identify himself by name and employing organisation, and give the Signaller an assurance that all staff and equipment are clear of the line.

When instructed to do so, the key must be returned to the instrument and turn it to the lock position.

The platforms are no longer protected.

ALWAYS ENSURE THAT YOU KNOW EXACTLY WHAT IS PROTECTED

Dated: 06/12/14

LN924 - APPERLEY JN. TO ILKLEY**Entire Line Of Route**

Train Operated Warning System. Provided continuously from Apperley Jn to the east end of Ilkley station platforms, sections C1 - C16.

On a double line, each TOWS section covers both lines. The junction areas of branches are part of the main line TOWS section.

Some TOWS sections include places where trains can stand for a short while in stations or may reverse - remember that the Rule Book tells you to **move clear** if the warning continues to sound and no train comes.

Operation of the TOWS system is by means of a special key. Turning a key switch either way will change the state of the system in that TOWS section to the opposite one; if it is on it will go off and if it is off it will go on. The key switches do not have a specific on or off position.

Key switches are normally positioned back to back on a lineside post. These either control parts of the same TOWS section or parts of adjacent TOWS sections. When you turn on the TOWS, you can only turn it off again at either the same switch or the next switch along the line in the correct direction, i.e. if the switch you turned it on by was on the Leeds side of the post, you must use the next switch towards Leeds to turn it off, or vice versa.

If the system is turned on at 2 it can be turned off at 2 or 3 but not at 1 or 4.

These instructions are for your **SAFETY** and supplement those in the Rule Book, they do not replace or change them.

Dated: 02/12/06

LN926 - DOCKFIELD JN. TO ESHOLT JN.**Entire Line Of Route**

Train Operated Warning System. Provided continuously, sections D1 (Guiseley end) to D7 (ShIPLEY end).

On a double line, each TOWS section covers both lines. The junction areas of branches are part of the main line TOWS section.

Some TOWS sections include places where trains can stand for a short while in stations or may reverse - remember that the Rule Book tells you to **move clear** if the warning continues to sound and no train comes.

Operation of the TOWS system is by means of a special key. Turning a key switch either way will change the state of the system in that TOWS section to the opposite one; if it is on it will go off and if it is off it will go on. The key switches do not have a specific on or off position.

Key switches are normally positioned back to back on a lineside post. These either control parts of the same TOWS section or parts of adjacent TOWS sections. When you turn on the TOWS, you can only turn it off again at either the same switch or the next switch along the line in the correct direction, i.e. if the switch you turned it on by was on the Leeds side of the post, you must use the next switch towards Leeds to turn it off, or vice versa.

If the system is turned on at 2 it can be turned off at 2 or 3 but not at 1 or 4.

These instructions are for your **SAFETY** and supplement those in the Rule Book, they do not replace or change them.

Dated: 02/12/06

LN928 - SHIPLEY EAST JN. TO BRADFORD FORSTER SQUARE SHIPLEY

Signal Passed at Danger (SPaD) Indicators

Drivers **MUST STOP** if they see a SPaD indicator illuminated irrespective of whether or not the indication applies to the line on which they are travelling (Unless they have been given authority to pass it by the Signaller.)

SPaD indicators are provided beyond the following signals:-

Signal Number	Location
L.3971	ShipleY platform 2 Down ShipleY Main
L.3966	ShipleY platform 3 Up Forster Square Main

Dated: 02/12/06

LN928 - SHIPLEY EAST JN. TO BRADFORD FORSTER SQUARE SHIPLEY

Trains composed of Mark IV stock.

Trains composed of Mark IV stock may only run via platforms 3 and 4 and may only stop for passenger purposes at platform 3.

Provided signal L3966 has cleared to permit this, a Mark IV train from Bradford must draw right down to the platform end so that all coaches are platformed.

Platform 4 Down Forster Square Main Line

The AWS magnet provided immediately on the ShipleY South Jn side of Platform 4 Down Forster Square Main Line starting colour light signal L3969 will only give a warning indication if a train passes the signal at Danger. No AWS indication will be received when the signal is cleared. If a warning indication is received the Driver must stop immediately, unless authority has been given for the signal to be passed at Danger.

Dated: 02/12/06

LN928 - SHIPLEY EAST JN. TO BRADFORD FORSTER SQUARE BRADFORD FORSTER SQUARE

Train ready to start plungers are provided on each platform. The person in charge of the train must operate the plunger **not before** two minutes before booked departure time, to indicate to the Signaller that the train is ready to depart.

Platform 1 Line

The AWS magnet on this line and immediately on the ShipleY side of L.3996 signal will only give a warning indication if a train proceeds towards or passes L.3996 signal at danger.

No AWS indication will be received when a proceed aspect is exhibited. If a warning is received the Driver must stop immediately unless authority has been given for the signal to be passed at Danger.

Dated: 02/12/06

LN928 - SHIPLEY EAST JN. TO BRADFORD FORSTER SQUARE

Shipley South Jn. To BRADFORD FORSTER SQUARE

Train Operated Warning System. Provided between Shipley South Jn and 206m 53ch (north of Frizinghall), sections B1 & B2 and between 207m 19ch (south of Frizinghall) and the north end of Bradford Forster Square station platforms, sections B3 - B5. There is NO TOWS in any of the branch platforms at Shipley nor through Frizinghall Station.

On a double line, each TOWS section covers both lines. The junction areas of branches are part of the main line TOWS section.

Some TOWS sections include places where trains can stand for a short while in stations or may reverse - remember that the Rule Book tells you to **move clear** if the warning continues to sound and no train comes.

Operation of the TOWS system is by means of a special key. Turning a key switch either way will change the state of the system in that TOWS section to the opposite one; if it is on it will go off and if it is off it will go on. The key switches do not have a specific on or off position.

Key switches are normally positioned back to back on a lineside post. These either control parts of the same TOWS section or parts of adjacent TOWS sections. When you turn on the TOWS, you can only turn it off again at either the same switch or the next switch along the line in the correct direction, i.e. if the switch you turned it on by was on the Leeds side of the post, you must use the next switch towards Leeds to turn it off, or vice versa.

If the system is turned on at 2 it can be turned off at 2 or 3 but not at 1 or 4.

These instructions are for your **SAFETY** and supplement those in the Rule Book, they do not replace or change them.

LN930 Skipton Middle Jn. To Rylstone

ELECTRIC TOKEN BLOCK

The section of route between Skipton Middle Jn and Rylstone LC (TMO) is designated ETB utilising DiBloC token machines.

Trains running towards Rylstone Quarry from Skipton

Leeds North-West workstation signaller must be contacted for permission to remove a token key from the DiBloC machine located adjacent to L4042 signal. The train driver must then contact the Leeds North-West workstation signaller again once they are in possession of a token key prior to the signaller clearing L4042 signal.

Upon arrival at Rylstone LC (TMO) the train will be brought to a stand at the STOP board marked "STOP AND OBTAIN PERMISSION TO PROCEED. END OF TOKEN SECTION." and the token key replaced in the DiBloC machine. Once permission has been obtained from the PIC, the train may proceed towards the quarry. The PIC (or driver of a unit which may be driven from both ends) must then inform the Leeds North-West workstation signaller that the token has been replaced and the train has passed the crossing complete with tail lamp.

Trains running towards Skipton from Rylstone Quarry

The departing train must initially request permission from the Leeds North-West workstation signaller for permission to depart towards Rylstone LC (TMO). Once permission has been obtained, the train must be brought to a stand at the STOP board marked "STOP AND OBTAIN PERMISSION TO PROCEED. START OF TOKEN SECTION" and permission obtained from the Leeds North-West workstation signaller to remove a token key from the DiBloC machine.

Once in possession of the token key, the train may proceed towards Skipton Middle Junction, obeying L4039 signal.

Once the train is fully clear of L4042 signal, the token key may be replaced in the DiBloC machine and the Leeds North-West workstation signaller advised that the token has been replaced and the train is complete with tail lamp.

Taking possession of or taking a line blockage between Skipton Middle Jn. And Rylstone LC (TMO)

A line blockage / T3 Possession may be granted from Skipton to Rylstone TMO crossing – Clear of 5155B pts to Rylstone TMO crossing only if a PICOP/ COSS / IWA /SWL or PC has requested permission to remove a token key from the machine at either end of the token section. Permission to remove a token key from either machine must be given by the Leeds North-West workstation signaller before a token key is removed in these circumstances.

To give up a line blockage or possession in this section previously laid protection shall be lifted and the token key replaced in the DiBloC machine at either end of the token section. The Leeds North-West workstation signaller must then be informed that the token key has been replaced before any reminder appliances can be removed on the workstation display.

Taking possession of or taking a line blockage between Rylstone LC (TMO) and Swinden Quarry boundary.

A possession of sidings may be taken between Rylstone LC (TMO) TMO1 STOP board and either the folding STOP board located at 06m 45ch or the folding STOP board located at 06m 52ch with the Swinden Quarry PIC who is situated in the loading bunker at the quarry. The Swinden Quarry PIC shall dictate which folding STOP board shall protect the quarry end of the possession of sidings dependant on the position of any trains within the quarry.

In order to take a possession of sidings of this section the procedure shall be that PIC authority is granted, the appropriate folding STOP board in the 4ft is lifted and the Rylstone LC quarry side crossing gate is locked with a non-standard padlock.

To give up a possession of sidings of this section Rylstone LC quarry side crossing gate shall be unlocked, the appropriate folding STOP board is lowered and the line reopened with the quarry PIC.

The quarry PIC can be contacted on 01756 753854 or in person at the rail loadout at the quarry.

In the event of no PIC being present at the quarry, the line blockage or possession shall be notified to the Tarmac Lead PIC on 07484 905477. The same contact shall be used to notify the possession of sidings being given up unless the quarry PIC has resumed duty by this point.

Dated: 31/03/2024

**LN932 - SHIPLEY SOUTH JN. TO SHIPLEY WEST JN.
SHIPLEY****Platform 5**

In the event of a track circuit failure, this line will normally be worked in the Down direction only and Working by Pilotman will not be introduced. If it is necessary to work the line in both directions during a track circuit failure, Working by Pilotman will be introduced.

Dated: 02/12/06**LN932 - SHIPLEY SOUTH JN. TO SHIPLEY WEST JN.
SHIPLEY****Platform 5 Up Direction Forster Square Single Line**

The AWS magnet provided immediately on the Shipley South side of Platform 5 Up Direction Forster Square Single Line starting colour light signal L3965 will only give a warning indication if a train passes the signal at Danger. No AWS indication will be received when the signal is cleared. If a warning indication is received the driver must stop immediately, unless authority has been given for the signal to be passed at danger.

Dawdon Jn

RULE BOOK MODULE P1

Single Line working over the Up Sunderland line between Lancaster Road Jn and Dawdon Jn.

When single line working is in operation over the Up Sunderland line, it will not be necessary to appoint a handsignaller for Down direction trains. Drivers of Down direction trains must be instructed by the pilotman to obey signal NS7171.

Rule Book Module P1 Sections 3.5a) and 6.2a) are modified accordingly.

Drivers of Down trains may be authorised to proceed without being accompanied by the pilotman.

The above arrangements are applicable in all weather conditions.

Single Line working over the Down Sunderland line between Ryhope Grange and Dawdon Jn.

When single line working is in operation over the Down Sunderland line, it will not be necessary to appoint a handsignaller for Up direction trains. Drivers of Up direction trains must be instructed by the pilotman to obey Signal NS7168.

Rule Book Module P1 Sections 3.5a) and 6.2a) are modified accordingly.

Drivers of Up trains may be authorised to proceed without being accompanied by the pilotman.

The above arrangements are applicable in all weather conditions.

Dated: 15/11/10

LN627 - NORTHALLERTON LONGLANDS JN TO NEWCASTLE EAST JN VIA THE COAST

Ryhope Grange Jn To Pelaw Jn for Leamside TPWS/INDUSI Automatic Train Stop

All trains, other than Metro trains, running between Ryhope Grange and Pelaw Jn must be fitted with operative TPWS in the leading cab.

The Indusi Automatic Train Stop must be operative in the leading cab of all Metro trains running on Network Rail infrastructure.

A train on which the TPWS has failed must not be allowed to proceed beyond:

- Hartlepool or Ryhope Grange if it is a Down train or
- Pelaw Junction if it is an Up train.
- Boldon North Junction (if it is a train from Tyne Dock)

If a failure of the TPWS occurs beyond these locations, or the Indusi Automatic Train Stop fails on a Metro train whilst on Network Rail Infrastructure, the Driver must immediately stop the train and advise the Signaller of the circumstances. The Signaller must liaise with Network Rail Control York, to establish where the train is to be taken out of service, or reverse so that it may return driven from a cab with operative TPWS or Automatic Train Stop. The most suitable of the following locations must be used to stable the train until either repairs can be carried out or assistance is given by a train fitted with working TPWS or Indusi Automatic Train Stop:-

1. East Boldon Up Loop
2. Sunderland Sidings 1 and 2

If it is not possible to utilise the above locations, the train may be allowed to proceed beyond Sunderland South Junction or Pelaw Metro Junction as appropriate provided the Signaller has obtained the permission of Network Rail Control, York. Before authorising a train with failed TPWS or Indusi Automatic Train Stop to proceed, the Signaller must advise the Driver where the train is to proceed to. The Signaller must ensure the line ahead on which the train is to proceed is clear of movements through to the location where the train will be taken out of service, or pass beyond the area used by Metro trains. Where possible, all signals on the affected route must be cleared before the movement starts.

Dated: 10/02/2020

LN627 - NORTHALLERTON LONGLANDS JN TO NEWCASTLE EAST JN VIA THE COAST

Ryhope Grange SB (RG)

A red light may be attached to the leading vehicle of a movement to be propelled from Ryhope Grange Sidings to stand in rear of signal RG10 on the Down Main line between Ryhope Grange and Pelaw Jn.

Dated: 07/12/13

LN627 - NORTHALLERTON LONGLANDS JN TO NEWCASTLE EAST JN VIA THE COAST

Ryhope Grange SB (RG) To Pelaw Jn for Leamside

Single Line Working Over The Up Sunderland Line – Rule Book Module P1

When Single Line Working is in operation over the Up Sunderland line, it will not be necessary to appoint a Handsignaller for Down direction trains at the following exit signals: -

6211 on the Up Sunderland line at Sunderland South Jn.

6241 on the Up Sunderland line at East Boldon.

6251 on the Up Sunderland line at Boldon West Jn.

Drivers of Down direction trains must be instructed by the Pilotman to obey the relevant signal. Rule Book Module P1, Section 3.5a) and 6.2a) are modified accordingly.

Drivers of Down trains may be authorised to proceed without being accompanied by the Pilotman. Section 7.1 is modified accordingly.

The above arrangements are applicable in all weather conditions.

Instructions To Train Crews And Other Persons Concerned Working On Or Near To The Electrified Overhead Lines.

The above routes are electrified and powered by a 1500 volt D.C. Overhead System.

The Standard Working Instructions for A.C. Electrified lines Rule Book Module G2, Section 8 must be observed and the Overhead System must be treated as being 25kV at all times. The only exceptions to this are: -

- competent Metro staff
- relevant infrastructure maintenance staff

who have been trained in the specific requirements and instructions associated with the 1500 volt D.C. Overhead System.

The Electrical Control Room Operator is based in York Electrical Control Room and the contact telephone number is **01904 525622 (external) or 037 5622 (internal)**.

This instruction is replicated in LN628, LN629 and LN630

Sunderland South Jn To Pelaw Metro Jn

Temporary And Emergency Speed Restriction Signs

All signs, indicators, and other associated equipment relating to Temporary and Emergency Speed Restrictions, will be of the standard type used on Network Rail controlled infrastructure, and the speed displayed on Warning Boards and Speed Indicators will be in miles per hour (mph).

Signs showing the equivalent speed in kilometres per hour (kmh) will be positioned directly beneath the mph signs and will: -

- be made of retro reflective material, and be of the same colours and similar dimensions as mph signs.
- be shaped as an elongated hexagon.
- bear an indication of the applicable speed in kilometres (rounded down to the nearest
- 5 kilometres per hour) with the letters 'kmh' displayed beneath the numeric value.

Note: - The miles per hour figure will not have "mph" displayed below it.

Both types of signs will be provided at all points where a Temporary/Emergency Speed Restriction is in place. However, kmh signs will not be provided at locations where a speed is indicated for a diverging route which is not available to Metro services, and mph signs will not be provided at locations where a speed is indicated for a diverging route which is not available to non Metro services.

Protection Arrangements – Rule Book Modules M1 And M2

Tyne and Wear Metro trains do not carry detonators, and as a result detonators will not be used when Emergency Protection or Assistance Protection is carried out in accordance with Rule Book Module M1, Section 4 and Module M2, Section 4.

When a Metro train is to be assisted by other than a Metro train, a mobile assistance team will be sent from Metro's Gosforth Depot. They will be equipped with an emergency coupler and detonators, and will assist the Metro Driver in carrying out normal Assistance Protection and recovery arrangements.

This instruction is replicated in LN628, LN629 and LN630

Examination Of The Line By Metro Trains - Rule Book Module TW1, Section 12

When a Metro Train Driver is required to examine the line, and in accordance with the appropriate rules he needs to be accompanied by a competent person during darkness, fog or falling snow or when in a tunnel, the following procedure must be applied before examination commences: -

When a single car unit

The internal lighting must be switched to emergency mode.

When a two car unit

Passengers must, if possible, be transferred to the rear vehicle and the internal lighting turned off in the leading vehicle.

This instruction is replicated in LN628, LN629 and LN630

Snowfall

The requirements of Rule Book Module M3 are amended as follows: -

Section 6.2: -

Earthing of the equipment is not required, **unless** there is a need for persons to approach the overhead line equipment, in which case, a Permit to Work must be issued as set out in the Working Instructions for the Sunderland DC Overhead Electrified Lines.

Beilhack Self-Propelled Snow Blower Machines

Instructions for working of this machine are detailed in the Scottish Territory Sectional Appendix. If the machine is required to work between South Hylton – South Sunderland Jn – Pelaw Metro Jn and a permit to work is to be issued, this must be done as set out in the Working Instructions for the Sunderland DC Overhead Electrified Lines.

This instruction is replicated in LN628

Dated: 28/12/18

LN627 - NORTHALLERTON LONGLANDS JN TO NEWCASTLE EAST JN VIA THE COAST

Ryhope Grange Sidings

Trains entering the sidings are required to check the position of the hand points by observing the position flag prior to entering No. 1 or No. 2 siding. If the points are not lying in the position to enter the intended siding the train crew are required to operate the points to the correct lie. Note that when existing the sidings, the position of the points does not require checking as the points are trailable.

When departing the sidings, the train crew are required to telephone the Signaller to seek authority to pass NS7125 or NS7217 Stop signs.

Permissible Speed Signs

The Permissible Speed Signs for the above routes are in both miles per hour (mph) and kilometres per hour (kmh).

Signs displaying mph are of the standard type used on Network Rail controlled infrastructure. Signs showing the equivalent speed in kmh are positioned directly beneath the mph signs and: -

- are made of retro reflective material, and are of the same colours and similar dimensions as mph signs.
- shaped as an elongated hexagon.
- bear an indication of the applicable speed in kilometres (rounded down to the nearest 5 kilometres per hour) with the letters 'kmh' displayed beneath the numeric value.

Note: - The miles per hour figure will not have "mph" displayed below it.

Both types of signs are provided at all points where a Permissible Speed change applies. However, kmh signs are not provided at locations where a speed is indicated for a diverging route which is not available to Metro services, and mph signs are not provided at locations where a speed is indicated for a diverging route which is not available to non Metro services.

Kmh indications have not been provided at Automatic Level Crossing Wrong Direction Speed Restriction Boards, and Metro Drivers must treat the speed indications as being in kmh.

Instructions to Train Crews and Other Staff Concerned Working on Network Rail Lines Adjacent to the Tyne and Wear Metro Electrified Lines

The Tyne and Wear Metro System is electrified on a 1500 volt D.C. System but must be regarded as being similar to the Network Rail 25KV AC System. The electricity is controlled by the Metro Control Centre at South Gosforth.

The A.C. Electrified lines Instructions, Rule Book Module AC Electrified Lines Section 3 must be complied with.

If an incident or accident affects the Metro lines, the provisions of Rule Book Module G1 section 6 or Module M1 must be applied.

Contact can be made with either the Metro System Controller (who controls the signals) at South Gosforth; the signaller at Tyneside IECC or by GSM-R emergency call to York Control.

Electrification telephones are provided at strategic electrical locations on the Metro. Cabinets are yellow with a silver telephone symbol and are not locked. These telephones provide direct contact with the Metro Infrastructure Controller located in the same office as the Metro System Controller. The telephone number is 0191 213 1003.

The Permissible Speed Signs for the above routes are in both miles per hour (mph) and kilometres per hour (kmh).

Signs displaying mph are of the standard type used on Network Rail controlled infrastructure. Signs showing the equivalent speed in kmh are positioned directly beneath the mph signs and: -

- are made of retro reflective material, and are of the same colours and similar dimensions as mph signs.
- shaped as an elongated hexagon.
- bear an indication of the applicable speed in kilometres (rounded down to the nearest 5 kilometres per hour) with the letters 'kmh' displayed beneath the numeric value.

Note: - The miles per hour figure will not have "mph" displayed below it.

Both types of signs are provided at all points where a Permissible Speed change applies. However, kmh signs are not provided at locations where a speed is indicated for a diverging route which is not available to Metro services, and mph signs are not provided at locations where a speed is indicated for a diverging route which is not available to non Metro services.

Kmh indications have not been provided at Automatic Level Crossing Wrong Direction Speed Restriction Boards, and Metro Drivers must treat the speed indications as being in kmh.

LN628 - SOUTH HYLTON TO SUNDERLAND SOUTH JN.**Entire Line Of Route****Protection Arrangements – Rule Book Modules M1 And M2**

Tyne and Wear Metro trains do not carry detonators, and as a result detonators will not be used when Emergency Protection or Assistance Protection is carried out in accordance with Rule Book Module M1, Section 4 and Module M2, Section 4.

When a Metro train is to be assisted by other than a Metro train, a mobile assistance team will be sent from Metro's Gosforth Depot. They will be equipped with an emergency coupler and detonators, and will assist the Metro Driver in carrying out normal Assistance Protection and recovery arrangements.

This instruction is replicated in LN627, LN629 and LN630

LN628 - SOUTH HYLTON TO SUNDERLAND SOUTH JN.

Entire Line Of Route

Temporary And Emergency Speed Restriction Signs

All signs, indicators, and other associated equipment relating to Temporary and Emergency Speed Restrictions, will be of the standard type used on Network Rail controlled infrastructure, and the speed displayed on Warning Boards and Speed Indicators will be in miles per hour (mph).

Signs showing the equivalent speed in kilometres per hour (kmh) will be positioned directly beneath the mph signs and will: -

- be made of retro reflective material, and be of the same colours and similar dimensions as mph signs.
- be shaped as an elongated hexagon.
- bear an indication of the applicable speed in kilometres (rounded down to the nearest
- 5 kilometres per hour) with the letters 'kmh' displayed beneath the numeric value.

Note: - The miles per hour figure will not have "mph" displayed below it.

Both types of signs will be provided at all points where a Temporary/Emergency Speed Restriction is in place. However, kmh signs will not be provided at locations where a speed is indicated for a diverging route which is not available to Metro services, and mph signs will not be provided at locations where a speed is indicated for a diverging route which is not available to non Metro services.

LN629 - PELAW METRO JN TO PELAW SOUTH JN

Entire Line Of Route

Instructions To Persons Working On Or Near To The Down And Up Pelaw Chord Lines.

Down Pelaw Chord

Network Rail Rules apply between Pelaw Metro Jn and signal 764. Between signal 764 and Pelaw South Jn, Tyne and Wear Metro Rules apply.

Up Pelaw Chord

Tyne and Wear Metro Rules apply between Pelaw North Jn and signal T6282. Between signal T6282 and Pelaw Metro Jn, Network Rail Rules apply.

The following instructions will apply to work on the Down and Up Pelaw Chord lines.

Where no movements of engineering trains are to be made in connection with the work

Down Pelaw Chord

Where the work requires to be carried out within the overlap of signal 764, the Metro System Controller, before authorising the protection arrangements to be put in place (in accordance with Metro Rules), must liaise with the Signaller at Tyneside Sunderland Workstation and obtain an assurance that no movements have been authorised from signal T6279 towards signal 764, and 2803 points at Pelaw Metro Jn have been placed and will be maintained in the Normal position using the individual point switch, until advice is received that the line is again clear for movements. An appropriate entry must be made in the Train Register.

Up Pelaw Chord

Where the work requires to be carried out less than 200 metres beyond signal T6282, the requirements of Rule Book Module TS1 Section13 2.2.2 and Handbook 8 Section 1.4 do not apply and signal T6282 must be used to protect the work. Before the Signaller at Tyneside Sunderland Workstation authorises the protection arrangements to be put in place, he must liaise with the Metro System Controller and obtain an assurance that no movements have been authorised from signal 765 towards signal T6282, and 7017 points at Pelaw North Jn have been placed and will be maintained in the Normal position until advice is received that the line is again clear for movements. The Signaller's copy of RT3181/1 form must be suitably endorsed.

Where train movements are to be made in connection with the engineering work.

Down Pelaw Chord

Where the work site is to be in the overlap of signal 764, that signal must be used to protect the work, and the protection placed ahead of it in accordance with Metro Rules. Before the Metro Systems Controller authorises the protection arrangements to be put in place, he must liaise with the Signaller at Tyneside Sunderland Workstation and obtain an assurance that no movements have been authorised from signal T6279 towards signal 764, and 2803 points at Pelaw Metro Jn have been placed and will be maintained in the Normal position using the individual point switch until advice is received that the line is again clear for movements. An appropriate entry must be made in the Train Register.

Where a worksite is required to commence on the approach to signal 764 and terminate beyond that signal, the work may only take place provided special working arrangements and instructions have been published in advance.

Up Pelaw Chord

Where a work site is to be within 400 metres (440 yards) beyond signal T6282, this signal must be used to protect the Rule Book Module T3 possession, and the protection placed as far from the signal as possible. Before the Signaller at Tyneside Sunderland Workstation authorises the protection arrangements to be put in place, he must liaise with the Metro System Controller and obtain an assurance that no movements have been authorised from signal 765 towards signal T6282, and 7017 points at Pelaw North Jn have been placed and will be maintained in the Normal position until advice is received that the line is again clear for movements. A record of this assurance being received must be recorded by the Signaller in the Train Register.

Where a worksite is required to commence on the approach to signal T6282 and terminate beyond that signal, the work may only take place provided special working arrangements and instructions have been published in advance.

Rule Book Module P2, Section 7: Modified Working Arrangements on Single Lines

If the signalling system fails & a Pilotman is not immediately available, provided the authority of the Responsible Person is obtained, Modified Working Arrangements may be introduced between Guisborough Junction & Nunthorpe. These arrangements apply to through train movements only.

When the Responsible Person has authorised introduction of the arrangements to allow a train to proceed without being accompanied by a Pilotman in accordance with the requirements of Rule Book Module P2, Section 7 the Signaller will:-

- Tell the driver what is happening
- Dictate or hand, as appropriate, form RT3177 to the Driver
- Give the driver any necessary instructions regarding the operation of level crossings
- Instruct the driver to pass the signal at danger, as shown in Part A of module S5 Passing a signal danger

Instruct the driver to confirm that the train has arrived at Middlesbrough complete with tail lamp

The Responsible Person must authorise the Modified Working Arrangements for each train to pass through the single line block section.

Working by Pilotman, as shown in Module P2, must be introduced as quickly as possible. The changeover to Working by Pilotman must be authorised by the Responsible Person

Dated: 06/12/14

LN634 - GUISBOROUGH JN. TO WHITBY NUNTHORPE

On passing the Down Distant board, the Driver must regulate the speed of his train in order to be able to stop at the Point Indicator if it is not illuminated. Illumination of the Point Indicator means the points are set correctly for the Down Loop.

If a train is stopped due to the Point Indicator not being illuminated, the Driver must advise the Signaller using the telephone at the Point Indicator. If the Point Indicator fails, a steady yellow flag during daylight, or a steady yellow lamp during darkness, or fog, or falling snow, may be exhibited at the Point Indicator and the Driver may proceed over the points.

Dated: 02/12/06

Rule Book Module P2, Section 7: Modified Working Arrangements on Single Lines

Rule Book Module S5, Passing a signal at Danger, Sections 1, 2, 3, 4, & 7

If the signalling system fails and a Pilotman is not immediately available, provided the authority of the Responsible Person is obtained, Modified Working Arrangements may be introduced on this line.

When the Responsible Person has authorised the introduction of the modified working to allow a train to proceed without being accompanied by a Pilotman in accordance with the requirements of Rule Book Module P2, Section 7 and Rule Book Module S5 sections 1, 2, 3, 4, & 7 the Signaller will:

- Tell the driver what is happening
- Dictate or hand, as appropriate, form RT3177 to the Driver
- Give the driver any necessary instructions regarding the operation of level crossings
- Authorise the driver to pass the controlling signal at danger and/or Stop Board, in accordance to the requirements of Rule Book Module S5
- Instruct the driver to confirm that the train has arrived complete with tail lamp on arrival at the other end of the particular Section

The Responsible Person must authorise the Modified Working Arrangements for each train to pass through the single line block section.

Working by Pilotman, as shown in Module P2, must be introduced as quickly as possible. The changeover to Working by Pilotman must be authorised by the Responsible Person.

LN634 GUISBOROUGH JN TO WHITBY

NUNTHORPE TO WHITBY

Rule Book Module TS7, No-Signaller Token Regulations

Instructions to Traincrews And Others Concerned For The “No Signaller” Token System On Single Lines With Remote Crossing Loops (NSTR)

1. NSTR SYSTEM and TPWS

- 1.1 The object of the NSTR System is that not more than one train may be permitted in a single line block section between two token stations at the same time.

The line in the platforms at Battersby and Whitby must be treated as station limits with permissive working applying for Class 1,2, 3 ECS, 5 and 0 trains only.

- 1.2 All “Stop obtain token and permission to proceed” boards and the points indicators at Battersby are equipped with TPWS train stops. The withdrawal of a token will suppress the train stop for 5 minutes. When it is necessary in accordance with these instructions for a driver to pass one of them without a token being withdrawn, the driver must operate the TPWS train stop override button.

DEFINITION OF TERMS

The term “token station” refers to a location where token instruments are provided, either at or remote from Nunthorpe signal box.

Note: Grosmont “intermediate token instrument” is not a token station and is only used by trains passing to and from the North Yorkshire Moors Railway.

The term "Single line block section" refers to the line between the section signal or "Stop obtain token and permission to proceed" board at one token station and the signal or "Stop obtain token and permission to proceed board" (or the “End of token section” board at Whitby), at the next token station in the same direction of travel.

2. DRIVERS NOT TO LEAVE A TOKEN STATION OR INTERMEDIATE TOKEN INSTRUMENT AT GROSMONT WITHOUT A TOKEN AND OBSERVING PROPER PROCEDURES

- 2.1 The driver must firstly obtain the Nunthorpe signaller’s permission before withdrawing a token from an instrument. When requesting permission, the driver must state the train’s identity and its location, the place to which it is to proceed and where applicable give the signaller an assurance that a steady blue TPWS status light is showing at the token instrument.

When a token has been withdrawn, where applicable the steady blue TPWS status light will then change to a flashing blue light and will flash for 5 minutes indicating the TPWS is correctly suppressed. If after the token has been withdrawn the blue TPWS status light ceases flashing or fails to commence flashing, the signaller must be informed.

With the exception of Grosmont Intermediate token instrument for a train departing Grosmont to Whitby, or a train departing Whitby platform 2, a token must not be withdrawn more than 5 minutes before the booked departure time of the train. This instruction also applies for a train departing Grosmont towards Glaisdale. If the train does not depart within 5 minutes of the token’s withdrawal, the signaller must be advised as the TPWS will no longer be suppressed. The driver must with the signaller’s permission replace the token in the instrument and remove another token in order to suppress the TPWS again.

The driver must obtain verbal permission from the signaller to pass a Stop Board after a token has been obtained.

- 2.2 The driver must be in possession of the correct token before leaving a token station or Grosmont intermediate token instrument unless:-
- (a) the train is worked by two or more locomotives in which case the token must be shown to each driver and carried by the driver of the leading locomotive or
 - (b) the line is under possession or
 - (c) working by pilotman applies or a special authority card is issued or
 - (d) the train is to enter an obstructed section to assist a failed train or to remove a portion of a divided train.
- 2.3 The TPWS Uninterrupted Power Supply status (UPS) is indicated by a steady blue light in the token cabinet. If this light is extinguished, the TPWS (UPS) has failed and must be reported to the signaller. The signaller will advise the driver of every train of the circumstances and instruct the driver to operate his TPWS override button before passing the Stop Board until the TPWS (UPS) Power Supply is restored.
- 2.4 The following communication protocol must be used whenever a token is to be exchanged

London North Eastern Route Sectional Appendix Module LN8

- (i) Having returned the token to an instrument, the driver or ground frame operator must clearly state, the location, train reporting number, inform the signaller that the train has arrived complete with tail lamp and the token has been replaced.
- (ii) The driver may request permission from the signaller to withdraw a token for the next section (naming the token stations).
- (iii) When the driver is in possession of a token he must request "Permission to proceed past the Stop Board" (naming the token station) to the next location (naming the token station).
- (iv) If in a position to do so, the signaller will grant permission to proceed past the Stop Board (naming the token station) to the next location (naming the token station).

Note: Obtaining the token and permission to proceed from Glaisdale to Whitby does not exempt the driver from stopping at the Stop Board at Sleights.

3. GROSOMT INTERMEDIATE TOKEN INSTRUMENT

- 3.1.1 When a train is required to proceed from the North Yorkshire Moors Railway on to the Network Rail single line, the driver must firstly request the Grosmont signaller to release the Annett's Key. Then he/she must obtain the signaller at Nunthorpe's permission before withdrawing a token from the instrument. When requesting permission, the driver must state the train's identity, and the place to which it is to proceed.
- 3.1.2 The driver or competent person will proceed to the ground frame and operate the points for the movement to take place.
- 3.3 After the train has passed clear of the points, the driver or competent person must reset the points before proceeding.
- 3.4 When a train is required to proceed from Network Rail onto the North Yorkshire Moors Railway, the driver will bring his train to a stand clear of the points operated by the ground frame at Grosmont. Then he/she must obtain from the signaller at Grosmont permission to withdraw the Annett's key to operate the ground frame and ascertain which line he is to proceed over.
- 3.5 The driver or competent person will proceed to the ground frame and operate the points for the movement to take place
- 3.6 After the train has passed clear of the ground frame points on to the North Yorkshire Moors Railway complete with tail lamp, the driver or competent person must reset the points to normal, replace the token in to the intermediate instrument and advise the signaller at Nunthorpe that the train is inside clear complete with tail lamp and that the token has been restored. He/she must then return the Annett's key to the North Yorkshire Moors Railway instrument and notify the signaller at Grosmont that the movement is complete.

4. HANDLING OF TOKEN

- 4.1 The driver must keep the token unless it is required by the Ground Frame Operator to release a ground frame as detailed below in 4.2 and 4.3. The train must not then proceed on its journey until shunting is completed, the points have been locked in the proper position for trains to pass on the running line and the Ground Frame Operator has returned the token to the driver.
- 4.2 When the train has reached the next token station complete with tail lamp, the driver must deliver the Token to the signaller at Nunthorpe, the Ground Frame Operator or place it in the instrument and immediately advise the signaller he has done so.
- 4.3 When an Up train arrives for the NYMR at Grosmont or a Down train arrives for Platform 2 at the Whitby Point Set Indicator the Driver must surrender the Token to the Ground Frame Operator who will then be responsible for checking the train is complete with tail lamp, the ground frame is normalised and for returning the token to the instrument. The signaller at Nunthorpe should then be advised.

5. OCCUPATION OF SINGLE LINE FOR SHUNTING AT GLAISDALE OR LONG

TRAIN AT GLAISDALE

Any shunting movement out of a loop must proceed beyond the points indicator before returning.

A competent person (other than a member of the traincrew) must be appointed at Glaisdale to supervise the token arrangements as follows:-

- (i) When it is necessary for a locomotive to run round its train, the competent person must obtain the tokens for the Battersby to Glaisdale and Glaisdale to Whitby sections. The driver must be handed the token for the single line section he requires to occupy before the locomotive commences the run round movement. When the run round movement has been completed and the tokens replaced in the instruments, the signaller must be advised. When the train is ready to proceed the provisions of Regulation 2 must then be observed in order for the train to proceed.
- (ii) When a train is too long to be accommodated within the crossing loop, the signaller will not authorise the driver of a train in the opposite direction to withdraw a token and proceed until he has received an assurance from the competent person that the long train has passed clear into the loop.

6. TRAIN REQUIRING TO STOP OR REVERSE IN SECTION

- 6.1 If a train is to reverse at a point in the section and return to the token station at which it entered the section, the driver must inform the signaller when the token is withdrawn. If there is a telephone to the signaller at the point where the train reverses, or contact can be made by radio, the driver must inform the signaller on arrival, and again, when the train is ready to depart.

- 6.2 If a train is to stop in section other than for a short time at a station, the driver must inform the signaller when the token is withdrawn. If there is a telephone to the signaller at the point where the train stops, or contact can be made by radio the driver must inform the signaller on arrival, and again when the train is ready to depart. In the case of an engineering train or Officer's Special train stopping in section, the signaller must be informed of the train's progress by means of the first available telephone or by radio, after it has restarted.

7. SECTION OBSTRUCTED BY FAILED TRAIN OR CROSSING LOOP AT GLAISDALE OBSTRUCTED

- 7.1 A failed train must not be divided on the single line.
- 7.2 If one line of the crossing loops at Glaisdale is obstructed and it is necessary to run trains over the unobstructed line, a competent person must be appointed at the crossing loop to supervise the token arrangements and the securing of points.
- 7.3 If a train fails on arrival at Glaisdale:
- (i) the driver after arranging for assistance must proceed to the appropriate points indicator and place three detonators on the line on the approach to it.
 - (ii) the driver must not place the token in the instrument but must retain it in his cab until the assisting train has arrived. It must then be shown to the driver of the assisting train and placed in the instrument when the assisting train has cleared the single line, and then a token obtained for the train to proceed to the token station to which the train will proceed.
- 7.4 If a train fails (or can not go forward immediately) at Glaisdale or Battersby after obtaining a token and permission to proceed, but before passing the "Stop obtain token and permission to proceed" board, the driver must immediately advise the signaller and act on his/ her instructions with regard to the token and any protection required.
- If the driver cannot immediately communicate with the signaller he/ she must arrange for three detonators to be placed on the line on the approach to the points indicator in rear of the train.
- 7.5 The token must remain with the driver of a failed train except when a train fails between Glaisdale and Whitby and there is a traction unit in the sidings at Bog Hall ground frame or on the North Yorkshire Moors Railway at Grosmont which can render assistance, in which case the token may, provided the Nunthorpe signaller's permission has been obtained, be taken by the driver, fireman or pilotman to Bog Hall or Grosmont to release the ground frame after assistance protection has been carried out.

8. FAILURE OF TELEPHONES

- 8.1 If there is a failure of the telephones at the token instruments, the driver must use any other means to communicate with the signaller, but permission MUST be obtained before a token is withdrawn.
- 8.2 Working by pilotman must be introduced if all communication from the token station has failed.

9. TOKEN DAMAGED OR LOST, OR FAILURE OF TOKEN EQUIPMENT

- 9.1 If the driver is unable to withdraw a token from the instrument at a remote token station, he must advise the signaller, and if at Glaisdale or Whitby attempt to withdraw a token from the appropriate instrument on the other platform.

IN THESE CIRCUMSTANCES, AT GLAISDALE THE DRIVER MUST TAKE GREAT CARE TO ENSURE THAT HE WITHDRAWS THE CORRECT TOKEN FOR THE SECTION OF LINE OVER WHICH HIS TRAIN IS ABOUT TO RUN.

- 9.2 If a token is damaged or lost, or if there is a failure of the token equipment, and in addition there is a failure of the telephones at the token instruments, Working by pilotman must be introduced.
- 9.3 When Working by Pilotman is in operation, the driver must, if not accompanied by the pilotman, telephone the signaller when the train has arrived complete with tail lamp at a token station.
- 9.4 During a failure of token equipment between Whitby and Glaisdale, a North Yorkshire Moors Railway train may be allowed to proceed from Grosmont onto the Network Rail single line provided that the Pilotman is present with the token. If necessary, the signaller may authorise the technician to release a token to the Pilotman to enable a train to proceed from or return to the North Yorkshire Moors Railway. Any token so released must be retained by the pilotman unless required to be handed to a competent person to operate a ground frame, or to be surrendered to the technician. On completion of any movement the token must immediately be returned by the competent person to the pilotman. If a North Yorkshire Moors Railway train is already on the single line when the token equipment fails, it must be dealt with as instructed by Operations Control.
- 9.5 If the driver is unable to place a token in an instrument at a remote token station, he must advise the signaller and if at Glaisdale or Whitby then attempt to place it in the appropriate instrument on the other platform.

IN THESE CIRCUMSTANCES, IF AT GLAISDALE THE DRIVER MUST TAKE GREAT CARE TO ENSURE THAT HE PLACES THE TOKEN IN THE CORRECT INSTRUMENT FOR THE SECTION OF LINE CONCERNED.

If the driver is unable to place the token in an instrument, the train must not proceed until a competent person (other than a member of the traincrew) has been appointed at the token station to supervise the token arrangements.

10. WORKING AT BATTERSBY

- 10.1 If the signal does not clear for a train arriving at Battersby the driver must operate the route setting plunger. If this does not clear the signal the points must, on authority from the signaller, be manually operated by the driver and clipped and scotched in the required position. The driver must then be authorised to pass the signal at Danger and proceed to Battersby Station.
- 10.2 If a failure of the signalling equipment occurs before a driver is authorised to proceed to Battersby a competent person will be appointed to operate the points and authorise trains into and out of the station.
- 10.3 When a train has arrived at Battersby Station a movement must not be made back towards the Nunthorpe/Glaisdale end of the platform until a token and permission to proceed has been obtained.
- 10.4 The removal of a token from an instrument will operate the points and the points indicator will display a yellow indication with route indicator. The points indicator can also be operated by the route set plunger and this must be used if a train is delayed in leaving the station and the points indicator has reverted to "not set" (red) indication or a movement is required passed the points indicator without a token being withdrawn in the circumstances detailed in Instruction 2.2 (b), (c) and (d).
- If the route set plunger fails to set the route a movement must not pass the points indicator with the "not set" indication displayed unless the points are clipped and scotched in the required position. The driver must also operate the TPWS override button before proceeding.
- 10.5 A trolley, or on-track machine which cannot be relied upon to operate track circuits must not occupy the lines between signals B2, B3 and the "Stop Await Instructions" board on the platform line unless the person in charge of the movement is in possession of the shunt key in addition to the token for the section the movement is proceeding to or from.
- 10.6 When the shunt key is returned to the instrument after the ground frame has been used or in connection with 10.5 the signaller at Nunthorpe must be advised.

11. FAILURE OF POINTS INDICATOR AT GLAISDALE

If a train is stopped at a points indicator approaching Glaisdale, the driver must obtain a key, points handle, clip and scotch from the cabinet near the points and manually operate and secure them in the required position. The driver must then drive the train over the points and then return all the equipment to the cabinet. The signaller must be advised of the failure and given an assurance that the clip and scotch have been removed from the points.

12. WORKING AT WHITBY STATION

- 12.1 A trolley must not be placed/work on any line in the platforms at Whitby unless Rule Book Module TS1 13.2 or T3 has been taken for the Glaisdale to Whitby section.
- 12.2 A points set indicator (EV3039) is provided for the ground frame controlled points leading to the platforms. The route will normally be set for Platform 1 and the indicator will show a yellow aspect with a No1. Drivers must not pass over the points unless the correct indication is displayed
- 12.3 If, in the event of the correct indication not being displayed, provided the driver can ascertain the points are in the correct position and the indications at the ground frame are correctly showing, the train may proceed cautiously into the Platform. The signaller must be advised of the circumstances
- 12.4 Trains for Platform 2 must be brought to a stand the points set indicator (EV3039) and the token handed to the Ground Frame Operator. When the route is set and a steady yellow aspect with a No.2 is shown in the indicator, the train may proceed to the appropriate stop marker.
- 12.5 After the train arrives clear in Platform 2 complete with tail lamp the Ground Frame Operator will restore the route towards Platform 1, replace the token in the instrument advise the signaller at Nunthorpe.
- 12.6 When a train is ready to depart from Platform 2, the Driver must contact the Signaller at Nunthorpe and request permission to withdraw a token and pass the stop board (EV3049P2). The token must be handed to the Ground Frame Operator. When the ground frame points are set and a yellow aspect is displayed in the points indicator, the train may be drawn forward with the rear well clear of Bog Hall Level Crossing (using the SLU Boards). When the train has cleared the point work the Ground Frame Operator will restore the ground frame and convey the token to the driver. The driver **must not proceed** beyond the Token Reminder Board unless the driver is in possession of the token.
- 12.7 Movements using the Run Round Loop or requiring access to and from Bog Hall sidings must be made on the authority of the Ground Frame Operator.
- 12.8 Stabling of a train at the Station. A maximum train formation of one 2 car class 15X or one 3 car class 14X unit may be stabled at the buffer stop end of the Platform 1.
- 12.9 All drivers entering Whitby Station must be prepared to stop short of a stabled train
- 12.10 Buffer Stop position location verification – the Driver must inform the Signaller at Nunthorpe if any contact has been made between the train and the Buffer Stop in either Platform 1 or 2. When Whitby Station is manned and additional daily check of the position of the buffers, that the buffer stop light is operational and there are no tell tale marks on the buffers indicating possible contact. Any defects must be recorded and reported to Nunthorpe Signal Box immediately.

13. TRAINING STAFF IN OPERATIONS AT BATTERSBY, GLAISDALE AND WHITBY

- 13.1 Whenever it is necessary for staff to be trained or refreshed in their knowledge of the Manual Operation of the hydro-pneumatic points at Glaisdale, the motor points at Battersby or the Ground Frames at Battersby, Glaisdale or Whitby, the safety of those staff should be ensured by the person in charge of the group taking possession of the relevant token.
- 13.2 The person in charge of the group must be fully conversant with the operation of the no-signaller token instruments, but does not need to be a COSS
- 13.3 The person in charge of the group must telephone the signaller at Nunthorpe and obtain his permission to withdraw the appropriate token(s), agreeing at what time it will be necessary to restore the tokens to enable the passage of trains.
- 13.4 When the training is completed or suspended to allow the passage of a train(s), the token(s) must be restored to the instrument(s) and the signaller at Nunthorpe informed

14. Arrangements for Line Blockages

- 14.1 When a line blockage is to be taken for any work at any location between Nunthorpe and Whitby additional protection must always be provided in accordance with Handbook 8 or Handbook 21 for work that does not affect safety of the line a Protection Controller must be appointed and remain in Nunthorpe signalbox for the duration of the blockage. The Protection Controller must make the necessary arrangements and act as a reminder to the Signaller.
- 14.2 If it is necessary to arrange a blockage in accordance with Handbook 8 or Handbook 21 or Rule Book Module T3 for work in Platform 1 at Whitby, arrangements must be made to block the line between Glaisdale and Whitby.

15. Watering / train inspection in Platform1

The provision of a reminder appliance is available in the Key Token cabinet K1 for drivers needing to water or inspect a train in Platform 1. The reminder appliance shall be placed on the release lever of the Run Round ground frame to prohibit train movements on the Run Round Line. On completion of the task the reminder appliance will be returned to the Key Token cabinet K1.

Dated: 18/11/17

LN634 - GUISBOROUGH JN. TO WHITBY**BATTERSBY**

When a freight train is required to stand in the siding at Battersby the Traincrew must ensure that the foot crossing is left clear. Where necessary the train must be divided.

Before closing up the train, the Guard must ensure that no passengers are using or about to use the crossing.

Dated: 02/12/06

LN634 - GUISBOROUGH JN. TO WHITBY**KILDALE**

When a train composed of a unit formation other than a 1 X 2 car Class 14X or a Single car Class 153 stops at the above station, the Guard must only open one door for passengers to join or alight. The Guard must ensure that passengers wishing to alight are in the correct part of the train before departure from Battersby or Castleton Moor, as appropriate.

Dated: 02/12/06

LN634 - GUISBOROUGH JN. TO WHITBY**COMMONDALE**

When a train composed of a unit formation which exceeds either a 3 car Class 14X or a 2 car Class 15X in length stops at the above station, the Guard must only open one door for passengers to join or alight. The Guard must ensure that passengers wishing to alight are in the correct part of the train before departure from Battersby or Castleton Moor, as appropriate.

Dated: 02/12/06

LN634 - GUISBOROUGH JN. TO WHITBY**GROSMONT**

After obtaining the Network Rail token from the Driver to operate the ground frame for a movement to the North Yorkshire Moors Railway, the Guard must obtain the North Yorkshire Moors Railway Annetts key and an assurance from the North Yorkshire

Moors Railway Person in Charge at Grosmont that the points have been set for the intended movement, that no other conflicting movement has been authorised and details of the line over which the train will travel.

Dated: 02/12/06

LN634 - GUISBOROUGH JN. TO WHITBY**GROSMONT**

Steam locomotives working through Grosmont may take water from the water column situated between the main running line and the North Yorkshire Moors platform line.

The water column is located at the east end of platform one.

When the water column is not in use the arm is locked in a safe position to prevent the arm swinging foul of the main running line. This is achieved by the mechanism being locked by a 222 padlock.

When a driver wishes to obtain water, after placing the locomotive in the correct position he must unlock the water column arm to enable this to be swung round to allow the locomotive to obtain water.

When the required amount of water has been obtained the arm must be swung back to its normal "not in use" safe position followed by locking with the 222 padlock.

This 222 key also locks the token machine cabinets.

THE SECURING OF THE WATER COLUMN WHEN "NOT IN USE" IS THE DRIVERS RESPONSIBILITY

Dated: 02/12/06

LN634 - GUISBOROUGH JN. TO WHITBY**Ruswarp LC (ABCL)**

Drivers of Down trains must before departing from Sleights station contact the Signaller at Nunthorpe to obtain permission to proceed. The Signaller at Nunthorpe should be contacted by using the GSM-R radio

If it is still not possible to contact the Signaller at Nunthorpe, the Driver may proceed, but must approach Ruswarp Level Crossing cautiously, be prepared to stop short of the crossing and not to proceed over it until he is satisfied it is safe to do so.

Dated: 07/05/16**LN634 - GUISBOROUGH JN. TO WHITBY****WHITBY****Bog Hall Sidings**

Due to restricted visibility at Bog Hall footpath level crossing at 30m. 47 ch: trains to be stabled or run round in Bog Hall sidings must normally stand on No. 2 siding, which is the siding farthest from the running line, clear of the level crossing.

Any movement propelled towards or over the level crossing MUST either be preceded on foot or if the movement is being controlled by radio from the train, the person controlling the movement must keep a sharp lookout from the leading vehicle.

Dated: 02/12/06**LN636 - BEAM MILL JN TO SLAG ROAD (LACKENBY)****Slag Road LC**

The level crossing barriers are worked by means of the Driver operating a trackside "Request to Close Crossing " plunger on the approach to the crossing.

If the route through has already been set, the aspect lights on signals 714 and 731 will change from Red to Yellow and the Driver may proceed over the crossing at caution. If the aspect light has not changed to Yellow, the Driver must contact the Signaller at Grangetown by GSM-R Radio to determine the cause.

Loco/Train Failure

If a loco/train fails on the crossing, the Driver must advise the Signaller at Grangetown by GSM-R radio that his train is obstructing the crossing.

Mechanical/Electrical Failure of the Crossing

In the event of a mechanical/electrical failure of the crossing, the Signaller at Grangetown may authorize Drivers to pass signal 714 or 731 at Danger, proceed towards the crossing at Caution and give one long blast on the horn on approaching the crossing, but not pass over it until a green handsignal has been displayed by the Corus representative.

Dated: 07/05/16**LN638 - GRANGETOWN (SHELL JN) TO CLEVELAND FREIGHTLINER TERMINAL (WILTON)****ICI Weighbridge House To Cleveland Freightliner Terminal (Wilton)****Delivery and receipt of staff by persons other than the signaller**

Section of Line	Staff Station	Person authorised to receive or deliver staff other than the signaller
ICI Weighbridge House to Cleveland Freightliner Terminal	ICI Weighbridge House	ICI Person in charge
Cleveland Freightliner Terminal to ICI Weighbridge House	Cleveland Freightliner Terminal	Freightliner Operations Manager

Dated: 02/12/06**LN638 - GRANGETOWN (SHELL JN) TO CLEVELAND FREIGHTLINER TERMINAL (WILTON)****Cleveland Freightliner Terminal (Wilton)**

Trains to and from the Freightliner Terminal must be worked in accordance with the various notice boards.

Should it be necessary for a second train to run to the Freightliner Terminal, or for ICI to use the Single Line during the time a locomotive is in the Freightliner Terminal, the Driver of the first movement must hand the Train Staff to the Freightliner Operations Manager on request. The Driver having surrendered the Train Staff must not leave the Terminal until he has again received the Train Staff from the Freightliner Operations Manager and permission to proceed.

Dated: 02/12/06

LN642 - SALTBURN WEST JN TO BOULBY POTASH MINE**Saltburn West Jn To Crag Hall SB****Rule Book Module P2, Section 7: Modified Working Arrangements on Single Lines**

If the signalling system fails & a Pilotman is not immediately available, provided the authority of the Responsible Person is obtained, Modified Working Arrangements may be introduced between Saltburn West Jn & Crag Hall. The arrangements are permitted for through train movements over the Up & Down Branch Goods line only.

When the Responsible Person has authorised introduction of the arrangements to allow a train to proceed without being accompanied by a Pilotman in accordance with the requirements of Rule Book Module P2, Section 7 the Signaller will:-

- Tell the driver what is happening
- Dictate or hand, as appropriate, form RT3177 to the Driver
- Instruct the driver to pass the signal at danger, as shown in Part A of module S5 Passing a signal danger
- Instruct the driver to confirm the train has arrived at Darlington complete with tail lamp

The Responsible Person must authorise the Modified Working Arrangements for each train to pass through the single line block section.

Working by Pilotman, as shown in Module P2, must be introduced as quickly as possible. The changeover to Working by Pilotman must be authorised by the Responsible Person.

Dated: 07/12/13

LN642 - SALTBURN WEST JN TO BOULBY POTASH MINE**Saltburn West Jn**

Drivers of freight trains, when stopped at signal L214 on the Up Goods Branch, must advise the Signaller at Longbeck, by means of the telephone provided, that the train or light locomotive, as the case may be, has arrived, complete with tail lamp attached.

Dated: 22/11/08

LN642 - SALTBURN WEST JN TO BOULBY POTASH MINE**Crag Hall SB**Exchange of Train Token

The Driver of an Up freight train is authorised to exchange Tokens on the move at a maximum speed of 10mph.

Entire Line Of Route

Between Longbeck (27m 79ch) And Crag Hall

Rule Book Module P2, Section 1.1. If the Tokenless Block system fails and a Pilotman is not immediately available, provided the authority of the Network Rail Local Operations Manager is obtained, working by Drivers ticket (RT3177) may be instituted at either Longbeck or Crag Hall Signal boxes, or if the Tokenless Block system fails when a train has passed Longbeck Signal box en route to Crag Hall, a Driver reporting from L209 signal may be authorised to obtain a ticket from the locked box attached to the signal post (locked with a 21 key). The Signaller must then dictate to the Driver the modified working authority including the progressive number of the ticket. When both Signaller and Driver are satisfied that the form has been completed the Signaller, after ensuring that 580 points are reversed, may give the Driver permission to pass L209 signal at Danger and proceed to Crag Hall.

If a train, the Driver of which is in possession of a Drivers ticket becomes disabled between Saltburn West Jn and Crag Hall necessitating an assisting train entering the section, the Drivers ticket must be left in the driving compartment of the disabled train. The Drivers ticket must be handed to and retained by the Driver of the assisting train until both trains have been cleared from the section, when it must be handed to the Signaller

LN646 - NORTON-ON-TEES SOUTH TO FERRYHILL SOUTH JN.

Ferryhill South Jn

When a train from the Norton-on-Tees direction has passed Ferryhill South Jn and run to Ferryhill Up Sidings, and arrives either at (a) the Up Goods Loop or (b) within the Up Sidings clear of all connections, the train crew must ensure it is complete with tail lamp and advise the Signaller at Ferryhill accordingly.

Dated: 02/12/06

LN652 – BILLINGHAM JN TO PORT CLARANCE JN

Belasis Single Line

The single line between Belasis Lane Junction and Phillips Sidings Ground Frame will be controlled via No Signaller Token Remote working. Signs are provided to define the start and end of the Token Section. The token will be released by the York ROC (Hartlepool workstation) signaller at either Belasis Lane Jn or Phillips Sidings Ground Frame token machines. The withdrawal of the token at Belasis Lane Jn (1m 03ch) calls 2200 points at Belasis Lane Jn to move to the required lie for entry onto the Belasis Single line. If for any reason the points fail to move on the extraction of the token, or indications are not as expected the driver should contact the York ROC signaller and request the points to be operated via the Hartlepool workstation point key. A start of section, points indicator NS7207 will be provided at 1m 03ch on the entrance to the single line from the Down Belasis line. The indications provided by this Indicator are:

- A flashing red aspect indicates no route is set. This aspect is the normal 'ON' aspect. No authority to proceed.
- A flashing blue aspect indicates an authority to proceed, with the TPWS de-energised.
- A steady blue aspect indicates an authority to proceed in a degraded mode when the TPWS has failed to suppress.
- Both a flashing blue for normal departure or steady blue for degraded mode indicate an authority to proceed

Exiting the single line section, a train from Port Clarence Jn / Phillips Sidings Ground Frame should replace the token in the token machine at Belasis Lane Junction on arrival at signal NS7204 (1m 06ch).

Dated: 10/02/2020

LN656 - SEATON-ON-TEES BRANCH**Graythorpe LC (AOCL)**

This crossing is operated under the provisions of Rule Book Section Module TW8, Section 4, except that a white flashing light on the plunger panel when illuminated indicates the crossing road signals are working and the Guard or Shunter, if the crossing is clear may then authorise the Driver to proceed.

When the train has drawn clear of the crossing and no further movement is to be made over the crossing the Guard or Shunter must press the stop lights plunger and then rejoin his train.

Dated: 02/12/06**LN656 - SEATON-ON-TEES BRANCH****Hartlepool Power Station**1. Inwards Train

DRS movement to be brought to a stand at the Outer Security Gate. DRS train crew to telephone Security who will switch on floodlighting if required. When Security have ensured that the Nuclear Electric Locomotive is within the Inner Security Gate, they will permit the DRS movement to enter the main track. The train must be stabled beyond West Level Crossing, clear of the Crossing. When the train is at a stand the Trainman must apply handbrakes on all vehicles including the Guards Van. DRS locomotive to be uncoupled and return via the run-round track to leave the site. The Nuclear Electric locomotive will then carry out all necessary shunting movements.

2. Outwards Train.

The Nuclear Electric locomotive will shunt the outward train ready for collection onto the main track. DRS movement to be brought to a stand at the Outer security gate. DRS traincrew to telephone Security, who when they have ensured that the Nuclear Electric locomotive is within the Inner Security gate, will permit the DRS movement to enter the main track. DRS Trainman will couple the DRS locomotive to the train, release all handbrakes, perform all train preparation duties and sign for the appropriate wagon labels, envelope containing consignment note and Health Physicist's vehicle clearance certificate. The DRS movement will then depart from the site and Security will close and lock the Outer gate and switch off lighting if necessary.

Dated: 02/12/06**LN662 - RYHOPE GRANGE TO HENDON****Sunderland Docks****Fina Depot Automatic Open Crossing**

Rule Book Module TW8, Section 4 applies so far as is appropriate to this crossing, except that the road traffic signals and Drivers white lights are controlled by the Fina Depot or Port Cargo Operatives, as appropriate.

Dated: 02/12/06**LN662 – RYHOPE GRANGE TO HENDON****Hendon Arrival / Departure – Hendon Siding**

The Person in Charge will contact the signaller upon commencing duty to provide their contact details.

For arriving trains, any train under 350m will be routed directly to NS7221 Stop Sign where the driver will await acceptance by the Person in Charge. Longer trains should be held in the Down Cliff House Loop (if travelling in the down direction), or other suitable planned holding point, until the signaller confirms the Person in Charge is ready to accept the train to ensure Ryhope Grange Junction remains clear. For departing trains, the Person in Charge will contact the signaller for permission to release a train beyond Londonderry private sidings to ensure no conflicting move is simultaneously set into the Hendon Arrival / Departure – Hendon Siding.

LN666 - BOLDON WEST JN TO TYNE DOCK

Boldon North Jn To Tyne Dock

Special Instructions for Working of the Port of Tyne Operational Boundary

1. Summary working arrangement:

The former Tyne Dock Branch has been modified to include separate Arrival and Departure lines at a staggered Network Rail / Port of Tyne operational boundary, with a remaining section of single line renamed the Tyne Dock Siding.

Track circuits are provided on the Arrival, Departure and Siding lines, but Track Circuit Block Regulations are only applicable on the Arrival line up to P2 Stop Board, and on the Departure line beyond T6263 signal.

The Person In Charge (PIC) is responsible for controlling all train movements within the Port of Tyne sidings operational boundary, including the supervision of P21 points. In most respects P21 points behave as train operated points, but are provided with Point Indicators for both facing and trailing movements.

2. Trains Arriving to the Port of Tyne Terminal:

1. Trains will be signalled by Tyneside ROC from the Up/Dn Sunderland lines, via the Tyne Dock Arrival line, to P2 Stop Board.
2. At P2 Stop board, the Driver must contact the Port of Tyne PIC for permission to operate the P21 points plunger, and authority to proceed along the Tyne Dock Siding to P4 Stop Board.
3. Once authorised, Drivers must only proceed beyond P2 Stop board when the P21 Point Indicator In displays a Yellow aspect. The route over P21 points must be taken within 5 minutes of operating the plunger (the points auto-normalise), with this time restarting if the plunger is pressed again.
 - a. If a yellow aspect is not obtained after operating the P21 points plunger, the driver must contact the PIC for further instructions.
4. At P4 Stop board, the Driver must await instructions from the PIC, which may be given via authorised ground staff accompanying the train.

3. Trains Departing from the Port of Tyne Terminal:

1. Trains will be authorised to depart the terminal by the Port of Tyne PIC, via the Tyne Dock Siding and Tyne Dock Departure Lines, to T6263 Signal.
2. If a Yellow aspect is not displayed at P21 Points Indicator Out, Drivers must stop and contact the Port of Tyne PIC for instructions.
 - a. Permission to pass P21 PI Out at Danger (unlit or flashing red) may be given by the Port of Tyne PIC.
3. On arrival at T6263, the Driver must await display of a proceed aspect from the Signaller at Tyneside ROC.

4. Shunting and Banking Movements on the Tyne Dock Siding:

1. All train movements on the Tyne Dock Siding (single line) must be authorised by the Port of Tyne PIC, which may be given via authorised ground staff accompanying the train.
 - a. Note: Loose (un-coupled) Banking moves are permitted in the Tyne Dock Terminal and Siding under the Port of Tyne operating instructions.
 - b. Drivers must obtain separate movement authority for each direction of travel during the Shunting or Banking operation.
2. Shunting and Banking Movements are not permitted to pass the Limit of Shunt at P21 Points Indicator Out.

5. Emergency Calls:

1. In the event of an incident or emergency affecting the safety of the line on the Tyne Dock Arrival, Departure, or Siding line, the Signaller at Tyneside ROC should be contacted in the first instance.

Dated: 27/12/2021

Instructions to Train Crews and Other Staff Concerned Working on Network Rail Lines Adjacent to the Tyne and Wear Metro Electrified Lines

The Tyne and Wear Metro System is electrified on a 1500 volt D.C. System but must be regarded as being similar to the Network Rail 25KV AC System. The electricity is controlled by the Metro Control Centre at South Gosforth.

The A.C. Electrified lines Instructions and Rule Book Module AC Electrified Lines Section 3 must be complied with.

If an incident or accident affects the Metro lines, the provisions of Rule Book Module G1 section 6 or Module M1 must be applied.

Contact can be made with either the Metro System Controller (who controls the signals) at South Gosforth; the signaller at Tyneside IECC or by GSM-R emergency call to York Control.

Electrification telephones are provided at strategic electrical locations on the Metro. Cabinets are yellow with a silver telephone symbol and are not locked. These telephones provide direct contact with the Metro Infrastructure Controller located in the same office as the Metro System Controller. The telephone number is 0191 213 1003.

This instruction is replicated in LN627

Dated: 06/03/2021**LN670 – JARROW BRANCH****Entire Line Of Route****TPWS**

All trains, other than Metro trains, running between Pelaw Jn for Jarrow and Jarrow Oil Depot, must be fitted with operative TPWS in the leading cab. A train on which the TPWS has failed must not be allowed to proceed beyond T40/42 signals at Pelaw Jn towards Nexus infrastructure. If a failure of the TPWS occurs on a train proceeding towards Pelaw Jn for Jarrow, the Driver must immediately stop the train and advise the Signaller of the circumstances. The Signaller must liaise with Network Rail Control York, to establish where the train is to be taken out of service, or proceed to a location where it can be dealt with. The most suitable of the following locations must be used to stable the train until either repairs can be carried out or assistance is given by a train fitted with working TPWS:-

1. Tyne Yard Reversible line
2. Gateshead Reversible line

If it is not possible to utilise the above locations, the train may be allowed to proceed beyond T40/42 signals at Pelaw Jn for Jarrow, provided the Signaller has obtained the permission of the Nexus Service Delivery Controller (SDC) and Network Rail Control, York. Before authorising a train with failed TPWS to proceed, the Signaller must advise the Driver where the train is to proceed to. The Signaller must arrange with the Nexus SDC for the line ahead on which the train is to proceed to be cleared of Metro services through to the Jarrow Oil Depot. Where possible, all signals on the affected route must be cleared before the movement starts.

Dated: 07/01/2023

LN672 - WARDLEY TO PELAW JN

Wardley

Arriving Trains

The Bunker Operator will be advised of an approaching train before it reaches Pelaw and asked to clear the slot on signal T.1.

Provided the slot on T.1 signal has been cleared and the approaching train operates the treadle and track circuit PMW, the route will set and signal T.1 will normally clear for the approaching train. If for any reason T.1 signal fails to clear, the Driver must contact the Signaller at Tyneside who may instruct the Driver to operate the plunger located on the signal post and if the signal clears proceed.

If signal T.1 still fails to clear the Signaller at Tyneside must be advised.

Departing Trains

The Driver of a train ready to depart must contact the Signaller at Tyneside and give details of the train. Permission may then be given to operate the plunger at signal T.12 which will set the route to signal T.2.

If after operating the plunger signal T.12 does not clear the Signaller at Tyneside must be advised.

Dated: 02/12/06

LN678 - DARLINGTON NORTH JN TO EASTGATE HEIGHINGTON

Handbook 8, Section 1.2: Arranging to block the line

T845/T847 replacement switch can be relied upon for the protection of work defined in Handbook 8 Section 1.2

The Signaller at Tyneside (Darlington Workstation) must be advised under these circumstances.

Dated: 10/01/15

LN678 - DARLINGTON NORTH JN TO EASTGATE HEIGHINGTON

Rule Book Module P2, Section 1.1: Working of Single and Bi-Directional Lines by Pilotman

It will not be necessary to institute the requirements of Rule Book Module P2 1.1 during the failure of any of the above track circuits provided that the Signaller can ascertain that they are clear.

Dated: 10/01/15

LN678 - DARLINGTON NORTH JN TO EASTGATE Between SHILDON and BISHOP AUCKLAND

Rule Book Module P2, Section 7: Modified Working Arrangements on Single Lines

If the signalling system fails and a Pilotman is not immediately available, provided the authority of the Responsible Manager is obtained, Modified Working Arrangements may be introduced between Shildon & Bishop Auckland.

When the Responsible Person has authorised introduction of the arrangements to allow a train to proceed without being accompanied by a Pilotman in accordance with the requirements of Rule Book Module P2, Section 7 the Signaller will:-

- Tell the driver what is happening
- Dictate form RT3177 to the Driver
- Instruct the driver to pass the signal at danger, as shown in Part A of Module S5 Passing a Signal at Danger
- Instruct the driver to confirm the train has arrived at Bishop Auckland complete with tail lamp

The Responsible Manager must authorise the Modified Working Arrangements for each train to pass through the single line block section.

Working by Pilotman, as shown in Module P2, must be introduced as quickly as possible. The changeover to Working by Pilotman must be authorised by the Responsible Person.

Dated: 07/12/13

LN678 - DARLINGTON NORTH JN TO EASTGATE Weardale Railway (WR)

The line from Bishop Auckland to Eastgate is operated by the Weardale Railway CIC

A double sided board is provided at 11m 31ch at Bishop Auckland to indicate the infrastructure boundary between Network Rail & Weardale Railway

The Weardale Railway Duty Manager (WRDM) will be responsible for the operation of trains on WR infrastructure. He can be contacted through the WR Control Office - telephone No. 01388 526606

The One Train Working Regulations with Train Staff (Rule Book Module TW1, Section 32), as modified in these instructions, apply to the single line between Bishop Auckland (N.R.) & the end of section board at Bishop Auckland West (WR). The train staff is located at Shildon signal box when not in use.

The operation of trains between Bishop Auckland West (W.R.) & Eastgate are subject to instructions issued by WR.

Drivers of Down trains must stop at Shildon signal box to obtain the train staff. The signaller will give you any necessary instructions. Drivers must be in possession of the train staff before entering the OTW section at Bishop Auckland. The train staff must be handed to the WR agent on arrival at the end of section board at Bishops Auckland West (W.R.).

Drivers of Up trains must obtain the train staff & receive any necessary instructions from the WR agent at Bishop Auckland West (W.R.) before entering the OTW section to Bishop Auckland S36 signal. The train staff must be handed to the signaller on arrival at Shildon.

Any incidents occurring on WR infrastructure must be reported to the Weardale Railway Duty Manager.

Dated: 07/12/13

LN682 - KING EDWARD BRIDGE SOUTH JN. TO PETTERIL BRIDGE JN

Entire Line Of Route

Newcastle - Carlisle Intermediate Stations

Trains composed of 23 metre stock with automatic doors (i.e. classes 153, 155, 156, 158) which exceed TWO cars are restricted from calling intermediately for traffic purposes as follows :-

<u>STATION</u>	<u>MAXIMUM NUMBER OF CARS</u>	
	<u>DOWN</u>	<u>UP</u>
Dunston	3	3
MetroCentre	4	4
Blaydon	4	4
Wylam	4	4
Prudhoe	3	4
Stocksfield	4	5
Riding Mill	3	4
Corbridge	4	4
Hexham	4	4
Haydon Bridge	4	4
Bardon Mill	3	3
Haltwhistle	4	4
Brampton (Cumbria)	4	4
Wetheral	3	3

Except that units not in passenger service may be attached to a passenger train for stock balancing purposes, or in an emergency, but must be locked out of use throughout.

Dated: 22/01/2022

THIS PAGE IS INTENTIONALLY BLANK

**LN682 - KING EDWARD BRIDGE SOUTH JN. TO PETTERIL BRIDGE JN
PRUDHOE**

A Driver of a train detained at Prudhoe's last Down Stop Signal (PE 40) must contact the Signaller at Prudhoe by means of the GSM-R Radio.

Dated: 22/01/2022

**LN694 - BENTON NORTH JN. TO MORPETH NORTH JN. VIA
BEDLINGTON**

Holywell LC (ABCL)

Rule Book Module TW8, Section 4.4 (passage of trains during darkness) will not apply at this crossing provided the Emergency Plunger Unit has been used and the Driver has satisfied himself that the Road Traffic Lights are illuminated. In such circumstances he may, even if the Drivers red light continues to show, take his train over the crossing, ensuring it is safe to do so and sounding the horn continuously until the front of the train is on the crossing.

Dated: 04/12/11

**LN694 - BENTON NORTH JN. TO MORPETH NORTH JN. VIA
BEDLINGTON**

Hepscott LC (AHBC)

When a Driver is authorised to pass Down direction signal M139 at Danger, he must, before passing the signal, operate the special plunger in the telephone box, or if a Handsignaller is in attendance, ensure that this has been done. Before proceeding over Hepscott level crossing he must satisfy himself that the barriers are in the full lowered position.

Dated: 02/12/06

**LN694 - BENTON NORTH JN. TO MORPETH NORTH JN. VIA
BEDLINGTON**

Morpeth North Jn To Hepscott Jn

Working of trains on Up N.E. Curve. Whenever a train is brought to a stand at signal M134, the Driver must immediately telephone the Signaller.

Dated: 02/12/06

**LN694 - BENTON NORTH JN. TO MORPETH NORTH JN. VIA
BEDLINGTON**

Bedlington South sidings (Former Furnace way)

These sidings are for run around movements only, the stabling of trains or on track plant is not permitted within these sidings.

Dated: 05/08/24

LN696 - HEPSCOTT JN. TO MORPETH JN.**Morpeth Electrification Depot**

If a train has entered the electrification depot, no other train must be allowed to enter No.2 siding from either end until the Signaller has received an assurance that the train in the electrification depot is clear of the connection and no further movements will be made.

No movement must be made from the electrification depot which will foul No.2 siding without the authority of the Signaller which may be given, provided the Signaller has not authorised a conflicting movement into No.2 siding.

This instruction is replicated in LN600

Dated: 02/12/06

LN696 - HEPSCOTT JN. TO MORPETH JN.**Morpeth DMU Reverse Sidings**

When ready to depart, drivers of reversing trains must contact the signaller via GSMR before departing from either M120 or M122 and then wait for the signaller's authority to proceed.

This instruction is replicated on LN600

Dated: 25/04/15

LN702 - BEDLINGTON NORTH TO LYNEMOUTH ALCAN**Lynemouth Alcan To Marchey s House SB****SAFETY OF PERSONNEL****Module TS1 13.2.7 & Hand Book 8, Clause 2.6 and Handbook 21, Clause 2.6**

When protection arrangements are to be applied on the Up line between Lynemouth Alcan and this signal box the detonator protection must be placed 1¼ miles in the rear of the work and additionally, no train must be accepted from Lynemouth until the protection arrangements has been given up.

Dated: 06/12/14**LN702 - BEDLINGTON NORTH TO LYNEMOUTH ALCAN****Green Lane LC (AHBC)****Green Lane Automatic Half - Barrier Level Crossing.**

Because of the risk of road traffic backing up onto this crossing, there is a 10 mph permissible speed restriction on both rail approaches to this level crossing.

Drivers must approach this level crossing cautiously, prepared to stop short and check that the crossing is clear, proceeding at no more than 10 mph until the locomotive reaches the crossing, when the driver may accelerate up to the next permissible speed.

Dated: 14/02/10

LN706 - WEST SLEEKBURN JN TO NORTH BLYTH

Freemans To North Blyth

Rule Book Module TS8, Section 3.1 - One train working regulations; Method of signalling where a train staff is provided

Rule Book Module SS2 - Shunting

Instructions to Drivers

Down trains must be brought to a stand at the staff exchange point at Freemans for the signaller to deliver the train staff, which is an Annett's key.

Trains for Battleship Wharf must stop at the instruction board on approach to the ground frame points & the staff must be handed to the Person in charge (PIC) who would normally be the Shunter. Further movements towards the sidings must be only be made on the authority of the PIC.

Trains for North Blyth must stop at the instruction board on approach to the ground frame at the end of the one train working section and the staff must be handed to the PIC. Further movements must only be made on the authority of the PIC.

Trains must not pass the respective "Commencement of staff section" boards unless they have been shown the key token & the PIC has made the necessary arrangements.

Up trains must stop at the instruction board on the approach to Cambois TMO crossing & not proceed until the crossing has been operated & the staff has been obtained from the PIC.

The staff must be delivered to the Signaller at the staff exchange point at Freemans, Up trains are permitted to proceed at a speed not exceeding 10mph.

Instructions to Person in Charge (PIC) [who would normally be the Shunter]

You must advise the signaller at Freemans giving your name, company & telephone number & reach a clear understanding regarding the order of train movements over the single line.

Trains destined for Battleship Wharf will come to a stand at the instruction board at the ground frame points. You must obtain the staff from the driver to release the ground frame. When the route is set & the level crossing has been operated you may authorise the movement to enter the sidings in accordance with Rule Book Module SS2.

Trains destined for North Blyth will come to a stand at the "End of Staff Section" board. You must obtain the staff from the driver to operate the ground frame. When the route is set you may authorise the movement to enter the sidings in accordance with Rule Book Module SS2.

When trains are clear inside the sidings & the ground frame has been restored, you must advise the signaller at Freemans. You must retain the staff. If directed by the signaller, you must arrange to convey it to an alternative location. If you are relieved or hand the staff to another person you must immediately advise details of the new PIC to the signaller. If a train is stabled in the sidings during closure of Freemans signalbox, the staff may be left secured in the lockable cabinet provided at North Blyth, subject to prior agreement with the signaller.

Before authorising a train to pass beyond the "Commencement of staff section" Boards at Battleship Wharf or North Blyth sidings you must obtain the signaller's permission. You must show the staff to the driver & operate the ground frame, operate any level crossing before instructing the driver to proceed to the instruction board at Cambois TMO level crossing. After the ground frame is restored you must proceed to Cambois TMO level crossing & deliver the key token to the driver of the train before operating the crossing.

ROUTE CLEARANCE (LONDON NORTH EASTERN)

Last Updated: 01/09/2023

LONDON NORTH EASTERN

GENERAL NOTES

The following tables apply only to the working of locomotives/multiple units and coaching stock over running lines and sidings listed in the Table As of the Sectional Appendix. All speed restrictions and local instructions shall be adhered to.

The notations (used in these tables) are explained as follows:

- Y** Permitted to operate over the route without restriction.
- R** Permitted to operate over part or all of the route but restrictions apply. See "Notes" column for details.
- N** No published clearance*
- E** ECS/transit - self powered
- EH** ECS/transit - dead hauled - (pantograph (where fitted) is lowered)
- H** Hauled - (pantograph (where fitted) is lowered)
- B** When the loco's RA is higher than that of the route then permission is ONLY given (B) for trains working to/from a possession, or to assist a failed train in an emergency. Prior permission must be obtained from Network Rail Control.
- T** Permitted to operate with the Tilt system

* Where clearances are not published in the Sectional Appendix Route Clearance Tables vehicles are only allowed to operate when specifically permitted and the authority has been formally published in an operating notice.

Conditions of Operation

In addition to any restrictions published in the Route Clearance Tables, it shall be noted that there are other documents (Network Rail Acceptance Panel Summary of Rolling Stock/Infrastructure Compatibility, Discrepancy Registers, Local and General Instructions) that apply to operation on Network Rail managed infrastructure. The Railway Undertaking will ensure that it familiarises itself with these.

Tables

- D1** Diesel Multiple Units
- D2** Electric Multiple Units
- D3** Coaching Stock
- D4** Locomotives Electric and Diesel
- D5** Freight containers/swap bodies

Table D2B (London North Eastern) – Route clearance of electric multiple units

Last Updated: 23/09/2023

To be read in conjunction with General Notes.

357 MOD = 357 (Modified) and refers to Class 357 units that have had 65mm removed from the width of their footsteps

Table D3A (London North Eastern) – Route clearance of coaching stock**Last Updated: 18/03/2023**

To be read in conjunction with General Notes.

Network Rail documentation may refer to either Mark 1-3 stock or C1-3 gauge as detailed below:

C1 = standard passenger coaching stock gauge for Mark 1 and Mark 2 coaches with 9'0" wide bodywork and 64'6" or (57') long underframes.

C3 = standard passenger coaching stock gauge for Mark 3 coaches which are 23 metres (75') long overall.

Mk3 (MOD) = Mk 3 coaches (Modified) and refers to Mk 3 coaches which have been fitted with powered bodyside plug doors.

Mk3 DVT (MOD) = Mk3 DVT (Modified) and refers to Mk3 DVTs that have had centre pivot lateral bump stops modified to ESG-S-MO15, reducing lateral body movement.

Mk4 DVTs can operate over all routes cleared for Mark 4 coaching stock. Any restrictions applied to Mk4 coaching stock also apply to Mk 4 DVTs.

Mk3 coaches used with Class 43 power cars and fitted with external power-operated sliding doors, manufactured by Vapor Stone Rail Systems, and CET are compatible with all routes shown as cleared for Mk3 coaches.

Table D3A (East Midlands) – Route clearance of coaching stock**Last Updated: 14/07/2018**

To be read in conjunction with General Notes.

Network Rail documentation may refer to either Mark 1-3 stock or C1-3 gauge as detailed below:

C1 = standard passenger coaching stock gauge for Mark 1 and Mark 2 coaches with 9'0" wide bodywork and 64'6" or (57') long underframes.

C3 = standard passenger coaching stock gauge for Mark 3 coaches which are 23 metres (75') long overall.

Mk3 (MOD) = Mk 3 coaches (Modified) and refers to Mk 3 coaches which have been fitted with powered bodyside plug doors.

Mk3 DVT (MOD) = Mk3 DVT (Modified) and refers to Mk3 DVTs that have had centre pivot lateral bump stops modified to ESG-S-MO15, reducing lateral body movement.

Mk4 DVTs can operate over all routes cleared for Mark 4 coaching stock. Any restrictions applied to Mk4 coaching stock also apply to Mk 4 DVTs.

Mk3 coaches used with Class 43 power cars and fitted with external power-operated sliding doors, manufactured by Vapor Stone Rail Systems, and CET are compatible with all routes shown as cleared for Mk3 coaches.

Table D4D (London North Eastern) – Route clearance of locomotives

Last Updated: 21/02/2024

To be read in conjunction with General Notes.

Class 92 locomotives may additionally be dead hauled on any route that conforms to W6a and RA7 provided that the 'Battery Isolation Switch' is set to the 'Isolate' position.

Table D5A – Route Clearance of Freight Vehicles (London North Eastern and East Midlands)**Last Updated: 02/11/2024**

To be read in conjunction with General Notes.

The notations (used in these tables) are explained as follows for freight vehicles or loads conforming to the Group Standards:

Y Permitted to operate over the route without restriction.

R Permitted to operate over part or all of the route but restrictions apply. See “Notes” column for details.

S Permitted for, or prohibited to, specific traffic. See “Notes” column for details.

* Route does not conform to Group Standard W6A Lower Gauge as defined in GE/RT8073. Certain W6A vehicles are prohibited from all or part of the route; these restrictions are detailed on the Summary of Compatibility for the vehicles concerned.

N Prohibited from operating over the route

Conditions of Operation

When operating within a possession the notations detailed within the table may not apply subject to a risk assessment and the application of appropriate control measures (in accordance with company and Group Standards).

Freight traffic, other than containers/swap bodies, which exceed W6A gauge shall only operate in accordance with GORT3056-K

Vehicles conveying containers/swap bodies are also subject to the procedure detailed in GO/RM3056, Section J Intermodal Traffic.

Temporary authority for a specific wagon and container/swapbody combination may be granted by the Infrastructure Manager’s Gauging Engineer. This authority shall be detailed and issued on an RT3973/CON form.

Note

GO/RM3056 Section J Intermodal Traffic contains details of the wagon type (by TOPS code) and container/swapbody (by height, width and/or size code) combinations that conform to the gauges shown as column headings in this table.

Table D5B – Locomotive Gauge Clearance Table (London North Eastern)

Last Updated: 10/12/2022

To be read in conjunction with General Notes.

- All locomotives conform to locomotive gauge, apart from Class 37s (when fitted with roof horns).
- Locomotive gauge restrictions apply to all locomotives unless clearance is provided in the Route Clearance D4 Tables.
- Locomotives that are not listed in the Route Clearance D4 Tables are permitted to operate over routes that conform to locomotive gauge, subject to the restrictions detailed in the table below and the conditions stated in the locomotive's Summary of Compatibility document. Locomotives that are not listed in the Route Clearance D4 Tables require a valid Summary of Compatibility prior to operation over Network Rail infrastructure.
- Locomotives are PROHIBITED from using crossovers within platforms (code word LACER) unless their overall length (over buffers) is 18.288m or less.
- Gauge clearance for steam locomotives is considered under a separate process.

The notations (used in these tables) are explained as follows for locomotive gauge conformant vehicles:

Y Route conforms to locomotive gauge without restriction.

R Route conforms (or partly conforms) to locomotive gauge but restrictions apply. See "Notes" column for details.

N Route does not conform to locomotive gauge

Table D5B – Locomotive Gauge Clearance table (East Midlands)

Last Updated: 03/04/2021

To be read in conjunction with General Notes.

- All locomotives conform to locomotive gauge, apart from Class 37s (when fitted with roof horns).
- Locomotive gauge restrictions apply to all locomotives unless clearance is provided in the Route Clearance D4 Tables.
- Locomotives that are not listed in the Route Clearance D4 Tables are permitted to operate over routes that conform to locomotive gauge, subject to the restrictions detailed in the table below and the conditions stated in the locomotive's Summary of Compatibility document. Locomotives that are not listed in the Route Clearance D4 Tables require a valid Summary of Compatibility prior to operation over Network Rail infrastructure.
- Locomotives are PROHIBITED from using crossovers within platforms (code word LACER) unless their overall length (over buffers) is 18.288m or less.
- Gauge clearance for steam locomotives is considered under a separate process.

The notations (used in these tables) are explained as follows for locomotive gauge conformant vehicles:

Y Route conforms to locomotive gauge without restriction.

R Route conforms (or partly conforms) to locomotive gauge but restrictions apply. See "Notes" column for details.

N Route does not conform to locomotive gauge
