## ACKNOWLEDGEMENT SLIP

Please complete the Acknowledgement Slip below (if appropriate), detach it and hand it to your Supervisor/Manager.

I, the undersigned, acknowledge receipt of the Periodical Operating Notice and Supplement No. 69 to the LNW (S) Route Sectional Appendix effective from Saturday 07 December 2024 to Friday 28 February 2025

I undertake to familiarise myself with the contents and observe the instructions therein which apply to me.

**Full Name** (in capitals): \_\_\_\_\_

**Signature** (in full): \_\_\_\_\_

**Location:** \_\_\_\_\_

**Date:** \_\_\_\_\_

THIS PAGE IS INTENTIONALLY BLANK

## Introduction

This Periodical Operating Notice (PON) composed of two sections:-

Part 1 contains items published for the first time in the PON. Items published in this first section that have not been published in the Weekly Operating Notice (WON) are additionally noted by a vertical line in the margin.

Part 2 contains items previously published in the PON that are still valid.

Items marked \* \* will not appear in future issues of the PON and a note must be taken of them.

### **Supplement to the Sectional Appendix**

Attached to the back of this Notice are updates to the existing Sectional Appendix in the form of a Supplement. This is not part of the PON. It is a document in its own right. It has been physically attached to the PON to:

- ensure its effective distribution to all users
- reduce the amount of raw materials consumed in its generation and distribution
- reduce costs associated with production

The Supplement is identified as Supplement No. 69 and is dated 07 December 2024. In line with current industry standards items published in the Supplement will not appear in future PONs.

**Enquiries concerning amendments to the Sectional Appendix must be e-mailed to the  
Planning Publications mailbox  
[PlanningPublications@networkrail.co.uk](mailto:PlanningPublications@networkrail.co.uk)**

**Enquiries concerning amendments to the :  
NATIONAL OPERATING PUBLICATIONS should be addressed to  
STEVE RAY, NETWORK OPERATIONS.**

**Amendments to the Rule Book and Working Manuals for Railway Staff are produced by Rail Safety &  
Standards Board.**

**NETWORK RAIL LNWS ROUTE TAKE NO RESPONSIBILITY FOR ANY ERRORS THAT MAY BE  
CONTAINED IN THESE AMENDMENTS**

**Enquiries concerning amendments to the Rule Book and Working Manual should be addressed to:**

**RSSB  
The Helicon  
1 South Place  
London  
EC2M 2RB**

Email: [enquirydesk@rssb.co.uk](mailto:enquirydesk@rssb.co.uk)

### **RECORDING OF CONVERSATIONS**

Telephone calls to Network Rail Signal boxes, Electrical Controls and Production Controls may be recorded for the purposes of monitoring the quality of safety related information being exchanged and to assist with investigations into incidents.

**This publication is printed and distributed by APS Group**

***Telephone:***

0161 495 4515

***E-mail:***

[nrrons@theapsgroup.com](mailto:nrrons@theapsgroup.com)

**LATE OR NON-DELIVERY**

Please contact APS Group if you have not received your PON by 15.00 hours on the Wednesday prior to the operative Saturday of this publication, thus allowing adequate time to expedite tracking and replacement procedures as necessary.

If you receive this publication from your line manager or a local distribution point arrangement, then please contact them direct and NOT APS Group

## Part A - Foreword

### A1 Introduction

This document contains new and previously published amendments to National Operations Publications, which are considered too urgent to await a complete reissue of the document concerned.

### A2 Scope

This document is primarily used to publish minor changes to National Operations Publications. However, it may also be used to publish material changes that have already been consulted on but do not justify the reissue of a Rule Book module and / or handbook.

### A3 Implementation

The publication date of this document is **07 December 2024**.

### A4 Technical content

The technical content of this document has been approved by James Webb, Professional Head of Rail Operations, RSSB. Enquiries should be directed to RSSB at <https://customer-portal.rssb.co.uk/>.

### A5 Definitions

#### Material change

Where duty holders are required by a Railway Group Standard to do something physically different.

#### Minor change

A minor change comprises of one of the following:

- Typographical errors or changes to administrative details such as telephone numbers, or
- Changes for the purpose of clarification, where there is negligible potential for misinterpretation which diminishes safety, or
- Changes to operational documents affecting only one duty holder, provided that the duty holder consents to those changes.

### National Operations Publications

These are Railway Group Standards which set out mandatory requirements for direct application in the workplace and which are subject to frequent changes. These include any modules or handbooks forming part of the Rule Book (GERT8000) or its associated information handbooks with references in the RS500 series.

### Periodical Operating Notice

An official document for publishing details of changes to National Operations Publications and local operational publications to the railway industry. This is often referred to as the PON.

## Part B - Changes since previous issue

<b>Amendment No</b>	<b>Publication and section</b>
Part C - New amendments to National Operations Publications	
01/24	GERT8000-HB9, issue 8, IWA or COSS setting up safe systems of work within possessions, sections 3.3 to 3.5.
02/24	GERT8000-TS1, issue 18.1, General signalling regulations, regulation 12.1.
03/24	Handbook RS524, List of Dangerous Goods and their United Nations numbers, issue 1, table 1.
<b>Amendment No</b>	<b>Publication and section</b>
Part D - Previous amendments to National Operations Publications	
04/23	GERT8000-T3 Possession of a running line for engineering work, issue 11, section 9.1. This amendment is not carried forward as it has been published in the Rule Book.
02/22	Various modules and handbooks. Amendments to Rule Book modules TS9 and TW8 have not been carried forward as they have been published in the Rule Book.

## Part C - New amendments to National Operations Publications

### GERT8000 Rule Book

#### Handbook 9 IWA or COSS setting up safe systems of work within possessions

##### Explanation of change

As a result of the reissue of Handbooks 6 and 7 the cross-references to those handbooks have now been changed. Sections 3.3, 3.4 and 3.5 are amended as shown below to include the new cross-references. There are no changes to any other part of section 3.

##### **3.3 Safe system of work where all lines are blocked (safeguarded)**

Before you can treat your safe system of work as safeguarded, you must agree with the ES or SWL that:

- there will be no train or OTP movements at your site of work, or
- if there are train or OTP movements at your site of work, they will be made at no greater than 5 mph (10 km/h).

You must make sure that any other line at your site of work that is not inside the work site is blocked as shown in section 4.2 of handbook 6 or 4.3 of handbook 7.

##### **3.4 Safe system of work using a safety barrier (fenced)**

Before you can treat your safe system of work as fenced, there must be a safety barrier as described in section 3.3 of handbook 6 or section 6.5 of handbook 7 between your site of work and any open line.

You must also:

- reach a clear understanding with the ES or SWL that there will be no train or OTP movements at your site of work, or
- if there are train or OTP movements at your site of work, they will be made at no greater than 5 mph (10 km/h).

### 3.5 Safe system of work (separated)

Before you can treat your safe system of work as separated, you must carry out the instructions shown in section 6.6 of handbook 7 for any adjacent open line.

You must also:

- reach a clear understanding with the ES or SWL that there will be no train or OTP movements at your site of work, or
- if there are train or OTP movements at your site of work, they will be made at no greater than 5 mph (10 km/h).

A person acting as an IWA cannot use a site warden as part of this safe system of work.

## GERT8000 Rule Book

### Module TS1 General signalling regulations

#### Explanation of change

The module published in September 2024 incorrectly included a change to regulation 12.1 which it was finally decided would not be progressed. The wording of this regulation will now revert to that previously published, as shown below. There are no changes to any other part of regulation 12.

#### **12.1 When this general signalling regulation must be used**

You must carry out this regulation if you are told that a train cannot be signalled normally because a track circuit actuator (TCA) on the train has become defective.

You must pass on the details to the next signaller who is to signal that train.

## Handbook RS524 List of Dangerous Goods and their United Nations numbers

**Table 1**

**Explanation of change**

The 2025 RID regulations include a number of changes to the details of UN numbers which are as shown below.

**Amend:** the following as shown:

UN Number	Substance	Dangerous Goods Class	Subsidiary Hazard(s)	Packing Group
1835	Tetramethylammonium hydroxide aqueous solution	8		II, III
2870	Aluminium borohydride in devices	4.2	4.3	
3165	Aircraft hydraulic power unit fuel tank (containing a mixture of anhydrous hydrazine and methyl hydrazine) (M86 fuel)	3	6.1 8	
3292	Batteries containing metallic sodium or sodium alloy cells, containing metallic sodium or sodium alloy	4.3		
3423	Tetramethylammonium hydroxide solid	6.1	8	I

**Add:** the following new entries:

UN Number	Substance	Dangerous Goods Class	Subsidiary Hazard(s)	Packing Group
3551	Sodium ion batteries with organic electrolyte	9		
3552	Sodium ion batteries contained in equipment or sodium ion batteries packed with equipment, with organic electrolyte	9		
3553	Disilane	2.1		
3554	Gallium contained in manufactured articles	8		
3555	Trifluoromethylte-trazole-sodium salt in acetone, with not less than 68% acetone, by mass	3		II
3556	Vehicle, lithium ion battery powered	9		
3557	Vehicle, lithium metal battery powered	9		
3558	Vehicle, sodium ion battery powered	9		
3559	Fire suppressant dispersing devices	9		
3560	Tertramethylammonium hydroxide aqueous solution with not less than 25% tetramethylammonium hydroxide	6	8	I

## Part D - Previous amendments to National Operations Publications

### GERT8000 Rule Book

#### Handbook RS524 List of Dangerous Goods and their United Nations numbers

**Table 1**

**Explanation of change**

The 2023 RID regulations include a number of changes to the details of UN numbers which are as shown below.

**Delete**  
: the following

which ceased to be valid after 30<sup>th</sup> June 2023:

UN Number	Substance	Dangerous Goods Class	Subsidiary Hazard(s)	Packing Group
1169	Extracts, aromatic, liquid			

**Amend:** the following as shown:

UN Number	Substance	Dangerous Goods Class	Subsidiary Hazard(s)	Packing Group
1197	Extracts, liquid for flavour or aroma	3		II, III
1345	Rubber scrap or Rubber shoddy, powdered or granulated not exceeding 840 microns and rubber content exceeding 45%	4.1		II
1872	Lead dioxide	5.1		III
1891	Ethyl bromide (Bromoethane)	3	6.1	II
2015	Hydrogen peroxide, stabilized or hydrogen peroxide, aqueous solution, stabilized with more than 70% hydrogen peroxide	5.1	8	I

**Add:** the following new entry:

UN Number	Substance	Dangerous Goods Class	Subsidiary Hazard(s)	Packing Group
3550	Cobalt dihydroxide powder, containing not less than 10% respirable particles	6.1		I

## Changes to various modules and handbooks as a result of the term 'pilotman' being replaced by 'pilot'

### Explanation of change

It has been pointed out that the use of the term 'pilotman' in Rule Book modules P1 *Single line working* and P2 *Working single and bi-directional lines by pilotman* suggests that the person carrying out the role must be a man. This is not correct and the term has been changed to 'pilot'.

The modules and handbooks concerned will be reissued over a period. Those listed below will not be reissued in printed format at this stage but were amended as shown from 3 December 2022. Existing copies should be altered in ink to show these changes.

Electronic versions of the modules and handbooks including these changes can be found at [www.rssb.co.uk](http://www.rssb.co.uk) or in the Rule Book App.

Rule Book module or handbook	Section or regulation	Amendment
G1 General safety responsibilities and personal track safety for non-track workers	5.3 5.6	Amend 'pilotman' to 'pilot'
T3 ERTMS Possession of an ERTMS running line for engineering work where lineside signals are not provided.	7.2	Amend 'pilotman' to 'pilot'
TS3 Absolute block regulations	9.1 9.2.2 9.2.4 9.5	Amend 'pilotman' to 'pilot'
TS4 Electric token block regulations	2.2 8.1.1 8.2.1 8.6.1	Amend title of module P2 to read ' <i>Working single and bi-directional lines by pilot</i> '.
TS4 Electric token block regulations	8.1.1 8.1.2 8.2.1 8.2.2 8.2.3 8.5 8.6.1 8.6.2 8.7 8.8	Amend 'pilotman' to 'pilot'

TS5 Tokenless block regulations	8.1 8.2	Amend title of module P2 to read ' <i>Working single and bi-directional lines by pilot</i> '
TS5 Tokenless block regulations	8 8.1 8.2 8.3 8.4 8.5 8.5.2	Amend 'pilotman' to 'pilot'
TS7 No-signaller token regulations	2.2 8.1.1 8.2.1 8.3.1	Amend title of module P2 to read ' <i>Working single and bi-directional lines by pilot</i> '
TS7 No-signaller token regulations	3.1 8.1.1 8.1.2 8.2.1 8.2.2 8.2.3 8.3.1 8.3.2 8.4	Amend 'pilotman' to 'pilot'
TS8 One-train working regulations	8.1 8.4.1	Amend title of module P2 to read ' <i>Working single and bi-directional lines by pilot</i> '
TS8 One-train working regulations	3.1 3.2 8 8.1 8.2 8.3 8.4.1 8.4.2	Amend 'pilotman' to 'pilot'
Handbook 5 Handsignalling duties	4 6.1	Amend 'pilotman' to 'pilot'

## Changes to various modules and handbooks as a result of the term 'manned level crossing' being replaced by 'manually-controlled level crossing'

### Explanation of change

It has been pointed out that the use of the term 'manned level crossing' in the Rule Book suggests that the person operating the crossing must be a man. This is not correct and the wording has been changed as necessary to refer to these crossings as 'manually-controlled'.

The modules and handbooks concerned will be reissued over a period. Those listed below will not be reissued in printed format at this stage but were amended as shown from 3 December 2022. Existing copies should be altered in ink to show these changes.

Electronic versions of the modules and handbooks including these changes can be found at [www.rssb.co.uk](http://www.rssb.co.uk) or in the Rule Book App.

Rule Book module or handbook	Section or regulation	Amendment
T3 ERTMS Possession of an ERTMS running line for engineering work where lineside signals are not provided	5.9	Amend 'manned level crossing' to 'manually-controlled level crossing'

## Handbook RS523 GSM-R Handbook

### Explanation of change

A GSM-R acknowledged safety broadcast can now be used by a signaller to inform drivers that a warning board or speed indicator for a temporary speed restriction is missing or obscured. Section 8.4 has been amended to include this. (This addition was first published in the December 2017 Periodical Operating Notice).

The '**Poor rail conditions**' section has now been changed to refer to 'reportable' railhead conditions to match the changes that have been made in Rule Book module TW1 'Preparation and movement of trains' to describe rail conditions.

## 8 Broadcast calls

### 8.4 Acknowledged (safety) broadcast calls

Safety broadcast calls are used to reach a clear understanding by using non verbal acknowledgement.

After listening to the message in its entirety and after the call has been terminated the driver acknowledges their understanding of the message by pressing the **ST** button.

#### Uses for safety broadcasts

Safety broadcast calls can be used for the following scenarios.

- Poor rail conditions.
- Animals on the line (Not tunnels).
- Defective Emergency Indicators.
- Missing or obscured Temporary Speed Restriction (TSR) board.
- Unusual events (Not Track or Signalling).

#### Scripts for safety broadcasts

The following scripts set out the content of a pre-recorded safety broadcast:

### Poor rail conditions

"This is a safety broadcast from the signaller at \_\_\_\_\_. There are reportable railhead conditions at/on\* the approach to \_\_\_\_\_. Only acknowledge if you have fully understood this message. To acknowledge, press the **ST** button. End of safety broadcast."

\*Delete as appropriate.

### Animals on or near the line

"This is a safety broadcast from the signaller at \_\_\_\_\_. There are animals on or near the line at/between\* \_\_\_\_\_ and\* \_\_\_\_\_, proceed at caution. Only acknowledge if you have fully understood this message. To acknowledge, press the **ST** button. End of safety broadcast."

\*Delete as appropriate.

### Defective Emergency Indicators

"This is a safety broadcast from the signaller at \_\_\_\_\_. There is a defective emergency indicator for a \_\_\_\_\_ mph emergency speed restriction at \_\_\_\_\_. Only acknowledge if you have fully understood this message. To acknowledge, press the **ST** button. End of safety broadcast."

### Missing or obscured TSR board

"This is a safety broadcast from the signaller at \_\_\_\_\_. There is a missing/obscured\* warning board or speed indicator\* for the \_\_\_\_\_ mph temporary speed restriction at \_\_\_\_\_. Only acknowledge if you have fully understood this message. To acknowledge, press the **ST** button. End of safety broadcast."

\*Delete as appropriate

\*\* Insert name or location.

Note: If more than one TSR board is missing or obscured for a speed restriction then a GSM-R berth-triggered broadcast message cannot be used for this purpose.

### Unusual events

"This is a safety broadcast from the signaller at \_\_\_\_\_. \* \_\_\_\_\_. Only acknowledge if you have fully understood this message. To acknowledge, press the **ST** button. End of safety broadcast."

\*Insert details of the incident, location and any speed restriction in the main body of the broadcast.

Note: unusual events can include overcrowding on station platforms. The location of the event must be easily identifiable by the signaller and the driver.

## Part E - Amendments summary

### GERT8000 Rule Book

**THIS PAGE IS INTENTIONALLY BLANK**

## **DC electrified lines working instructions (NR/WI/ELP/3091)**

### **(dated December 2006, issue E2)**

#### **Explanation of change**

The current instruction 44 temporary isolations has been withdrawn and replaced with a new instruction 44 temporary isolations. The new TI instruction provides a simplified and structured process for the authorisation and circumstances in which TI may be utilised. It details the process for taking and giving up of a temporary isolation and provides for a new role of Person In Charge of Temporary Isolation (PCTI) to clearly define the roles and responsibilities of the staff involved in the temporary isolation process. It also provides clarity that the signal protection provided for the temporary isolation by the PCTI is separate to the protection arrangements that are required to be provided by the COSS.

**Signal Protection provided for a TI must never be relied upon to provide staff with a 'Safe system of work when walking or working on or near the line' as required by the Rule Book Module T7.**

#### **Pages 58 to 61 inclusive**

**Delete** Instruction 44 – Temporary isolations and replace with the following:

#### **44 Temporary isolations**

##### **44.1 General**

- 44.1.1 Temporary Isolations (TI) shall only be used to carry out work in order to contain an incident and/or make the railway safe for normal operation. Temporary Isolations shall only be taken by persons competent to do so. Temporary Isolations shall not be used to replace or short cut the normal planning process.

##### **44.2 Persons competent to take temporary isolations**

- 44.2.1 Staff or Contractors who undertake Temporary Isolations shall be certified in accordance with the appropriate Network Rail standards.

##### **44.3 Authorising a temporary isolation**

44.3.1 Temporary Isolations shall only take place

- (a) with the agreement of the Operations Control for the lines concerned
- (b) at those locations where a traction return rail is adjacent to the conductor rail

- 44.3.2 Short circuiting bars shall not be used where there is a guard board between the conductor rail and the adjacent running rail or where a yellow plastic shroud is fitted to the underside of the conductor rail. In such cases the Temporary Isolation shall not proceed and alternative arrangements shall be made to undertake the activities.

## **DC electrified lines working instructions (NR/WI/ELP/3091) (dated December 2006, issue E2) – Continued**

- 44.3.3 The Person In Charge of the Temporary Isolation (PCTI) shall contact the Operations Control concerned,
- (a) stating their name,
  - (b) job title,
  - (c) employer,
  - (d) the reason for requesting a TI
  - (e) the activity to be undertaken,
  - (f) the exact location,
  - (g) the lines concerned
  - (h) the anticipated duration of the Temporary Isolation required.
- 44.3.4 The Operations Control shall consult with interested parties and determine whether a Temporary Isolation shall be authorised.
- 44.3.5 If the Operations Control do not authorise the proposed TI, alternative arrangements shall be made to undertake the activity.
- 44.3.6 The Operations Control shall advise the PCTI, ECO and Signal Centre(s) of the authorised arrangements as soon as practicable.
- 44.3.7 The Signaller and ECO shall then agree the appropriate protection limits for the proposed electrical isolation.
- 44.3.8 The ECO shall then confirm to the PCTI the isolation arrangements to be applied.

### **44.4 Taking a Temporary Isolation**

- 44.4.1 On request from the PCTI, the ECO shall contact the signaller(s) and request the affected line(s) to be blocked to all trains to protect the isolation. The signaller shall apply any reminder appliances as necessary and record the details in the train register. The signaller shall confirm to the ECO when the line(s) have been blocked to all trains and the ECO shall make an appropriate entry in the ECR log.
- 44.4.2 The ECO shall open the relevant circuit breakers and/or other controlled devices and instruct as necessary the PCTI to operate any relevant switches to the required position.
- 44.4.3 The PCTI shall confirm details of the switches operated to the required position to the ECO, once this has been done.
- 44.4.4 The ECO shall take appropriate action to prevent reclosure of those circuit breakers and/or other controlled devices in accordance with the ECR instructions. The ECO shall record the details in the ECR log.

## **DC electrified lines working instructions (NR/WI/ELP/3091) (dated December 2006, issue E2) – Continued**

- 44.4.5 The ECO shall then advise the PICTI that the conductor rail has been switched off and that the conductor rail may now be tested.

### **44.5 Testing the conductor rail**

- 44.5.1 The PICTI shall make sure that the section or sub-section is switched off by testing between the conductor rail and the traction return rail adjacent to the conductor rail, using an approved testing device. The use of train line live indicator lamps is not permitted.
- 44.5.2 If the test proves the conductor rail is live then the ECO shall be informed immediately. The PICTI shall not attempt further switching without the authority of the ECO.

The ECO shall establish the cause of the irregularity and where possible, may agree revised arrangements. The signaller, PICTI and Operations Control shall be informed and where agreed, apply the revised arrangements.

- 44.5.3 Where it is not possible or practical to apply revised arrangements, the TI shall be cancelled.

### **44.6 Preventing re-energisation of the isolated section**

- 44.6.1 If the test proves that the conductor rail is switched off re-energisation shall be prevented by the application of a short circuiting bar(s) by a competent person adjacent to the position where the work is to be undertaken. Once short circuiting bars have been applied the TI is established.

### **44.7 Briefing staff before commencing work**

- 44.7.1 The PICTI shall arrange for all personnel to be briefed on the Safe Working Limits of the TI before any work begins.

### **44.8 Cancelling the temporary isolation**

- 44.8.1 When work has ceased the PICTI shall confirm that all persons, tools or equipment are clear of the CRE.
- 44.8.2 Where an electric train is involved the PICTI shall additionally confirm that all persons, tools or equipment are clear of collector shoes, and other exposed parts of electrical equipment on trains
- 44.8.3 The PICTI shall arrange for all members of any work group to be advised that the CRE is to be recharged.

## **DC electrified lines working instructions (NR/WI/ELP/3091) (dated December 2006, issue E2) – Continued**

- 44.8.4 The short circuiting bar(s) shall then be removed.
- 44.8.5 The PICTI shall then contact the ECO, confirming that they wish to give up the Temporary Isolation,
- (a) stating their name,
  - (b) job title,
  - (c) employer,
  - (d) the activity undertaken,
  - (e) the exact location,
  - (f) the lines concerned
  - (g) confirming that short circuiting bar(s) have been removed
  - (h) and all personnel are clear of the CRE

### **44.9 Making the conductor rail live**

- 44.9.1 The ECO shall upon receiving this request shall take the required actions to recharge the Temporary Isolation, ensuring any switches are operated with the current switched off and the section blocked to traffic (see instruction 15 of this WI). The PICTI shall confirm to the ECO when any relevant switches have been operated. The recharging of the Temporary Isolation shall be recorded in the ECR Log Book.
- 44.9.2 The ECO shall contact the signaller, advising that the CRE has been switched on and request for the block to all trains for the TI (and any additional blocks taken to allow safe closure of switches) be withdrawn.
- 44.9.3 The signaller shall withdraw the block to all trains for the TI (and any additional blocks taken to allow safe closure of switches) and advise the ECO when this has been done and record the details in the train register.
- 44.9.4 The ECO shall advise the PICTI that the isolation has now been restored and that the block to all trains for the TI has been withdrawn.

## DC electrified lines working instructions (NR/WI/ELP/3091) (dated December 2006, issue E2) – Continued

### Explanation of change:

The current range of forms shown in Appendix B, of the D.C electrified lines working instruction NR/WI/ELP/3091 - issue E2, have been updated and revised into a new Network Rail standard template. The existing forms shall be deleted and the new forms shall be used with effect from the 07<sup>th</sup> June 2008. These new forms will no longer be published within the work instruction but will be published separately under the new form reference numbers.

**Word copies can be found on the Network Rail business standards connect page using the new form reference number.**

Reference Appendix B, pages 69 to 80

### Delete the following forms:

- Conductor Rail Permit
- Form DA
- Form DS
- Form DP
- Form DE
- Form B1
- Form B2

**Replace** the forms, reference numbers as below, with the new forms published in the Network Rail Business standards page on connect.

- NR/L3/OCS/3091-CRP
- NR/L3/OCS/3091-DA
- NR/L3/OCS/3091-DS
- NR/L3/OCS/3091-DP
- NR/L3/OCS/3091-DE
- NR/L3/OCS/3091-B1
- NR/L3/OCS/3091-B2

## Miscellaneous Instructions

### NETWORK RAIL CONTROL – LNW CONTROL (SOUTH) CONTACT DETAILS

The following numbers may be used to contact Network Rail LNW Control (South).

**In an emergency or when safety of the line is affected, ALWAYS contact the controlling Signaller first.**

NETWORK RAIL OPERATIONS CONTROL	GSM-R CONTACT NUMBER
Route Control – West Coast South	74 3061 02
Route Control – Midlands & Western	74 3063 02

MD555 Nuneaton North Junction to Water Orton East Junction	From Nuneaton North Junction to 8m 10ch on the Down Arley and Up Arley lines.

The following activities require axle counter heads to be disconnected or removed and must be undertaken with appropriate Rule Book, Modules TS1 or T3 protection:

- Re-railing, resleepering or reballasting
- Removal of rails with axle counter heads
- Tamper operations past axle counter heads, other than:  
those using a split-head tamping machine suitable for tamping single sleepers around axle counters  
journeys of the tamper to or from the work site
- Stoneblower or ballast cleaner/regulator operations past axle counter heads, but not including journeys to or from the work site
- Any other work, which may affect axle counter heads.

In the Rugby SCC area all T3 Engineering possessions must have an EPR applied. In other areas, co-operative re-setting equipment is provided. A Signalling Technician must be provided to re-set the equipment.

Permanent Way and S & T Equipment utilising wheels for movement along tracks, such as trolleys and engineering skates, must not be used without the permission of the COSS/PC/PICOP.

#### **GSM-R – CAB RADIO REGISTRATION – AREA-SPECIFIC 99X LOCATION CODES**

When required to use a 99X location code to pre-register or to register the cab radio as shown in the GSM-R user procedures the following area specific location code must be used in the areas covered by this Sectional Appendix:

**996 London North Western Route**

**LNW South Route GI - Dated: 02/11/2024**

**This page is intentionally blank**

## GSM-R GENERAL INSTRUCTION

### TW5 SECTION 25 – KNOWN MISROUTED CALL LOCATIONS

The locations in the table below are known areas where calls are frequently misrouted to the wrong signaller. Calls may misroute to the wrong signaller if the 'contact signaller' button is pressed.

Drivers must carry out the 'Pending Registration' process on the radio and continue their journey.

Location	Fault Number	Comments	Outcome
Washwood Heath	FMS BCA647195	GSM-R calls from Washwood Heath location misrouting to Birmingham ROC Proof House Workstation instead of Washwood Heath Workstation..	CT7 Plates Requested

### GSM-R FAULTS AND FAILURES RESPONSE

#### VERSION 1.1

#### PURPOSE

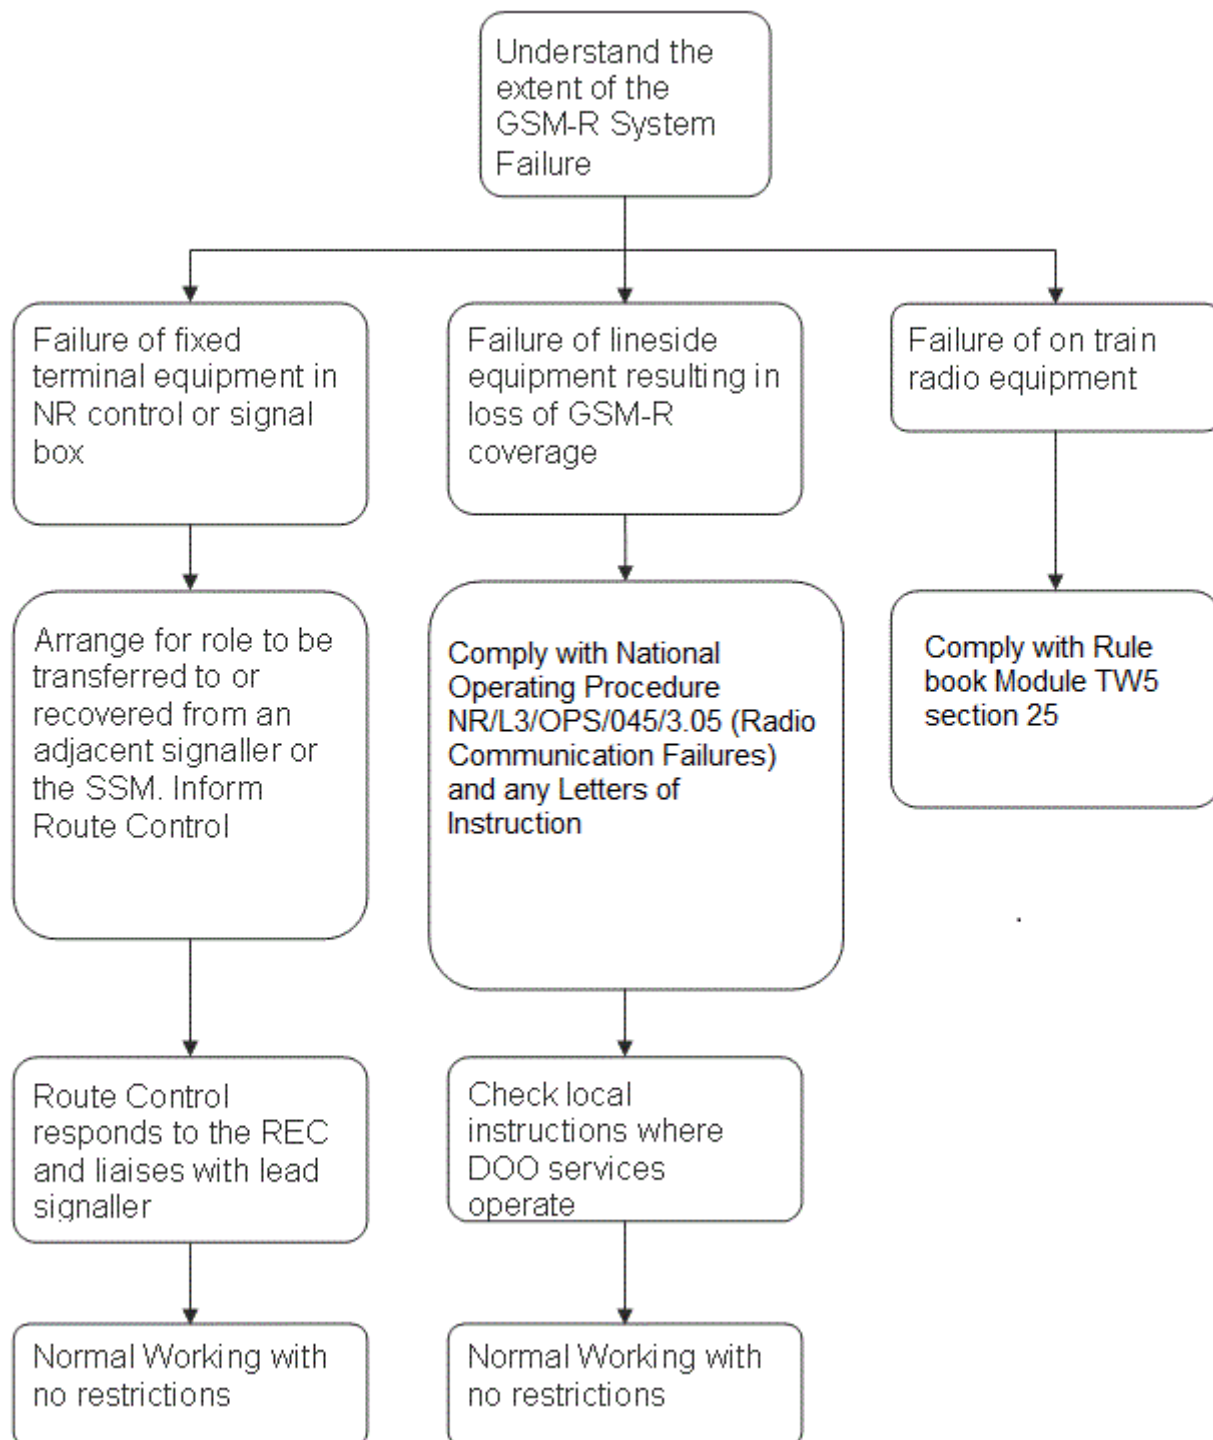

To provide guidance on the response to onboard GSM-R system faults and local/area infrastructure faults.

Appendix covers the response to system faults from a single fixed terminal through to failures of the infrastructure resulting in loss of coverage in a geographical area

**APPENDIX**

This chart details the process used by Network Rail Control to determine the operating response to GSM-R service or sub-system failures.

**LNW South Route GI - Dated: 02/11/24**

## Giving Up a T3 Around a Train Rule Book T3 Section 7 and Handbook 11 Section 12.2

It is not permitted to give up a T3 possession around an engineering train(s) or OTM(s) that does not reliably work track circuits. If a technical problem means it will no longer operate track circuits reliably, the PICOP must contact the controlling signalbox or workstation. The PICOP must arrange for the train(s) or OTM(s) to exit the possession site at caution before giving up the T3 possession, and ensure the signaller is made aware that the train(s) or OTM(s) will no longer reliably work track circuits.

**LNW South Route GI - Dated: 02/12/17**

## High Output Ballast Cleaner (HOBC) and Track Relaying Systems (TRS) Trains

These trains are authorised to transit between their operating bases and engineering possessions in excess of the normal route length limits provided that a suitable train path has been identified.

The train identification used and maximum lengths (including locomotives) are as follows:

HOBC 6Y07 or 6Y15	127 SLUs / 811 metres / 887 yards / 2659 feet
MOBC 6Y19	105 SLUs / 670 metres / 733 yards / 2198 feet
TRS 6X01 or 6X04	117 SLUs / 744 metres / 813 yards / 2439 feet

The HOBC and TRS may also exceed the maximum permitted single engine load between the locations listed below. In these circumstances the train concerned must operate with a locomotive at each end. The rear loco is authorised to apply power as directed by the lead driver to assist as required in the negotiation of inclines between the mileages shown. In these cases both locomotives must be manned as per Train Company manning agreements and equipped with back to back radios.

Rule Book, Module TW1, Section 15.1 is modified accordingly.

Between	Line	Mileage
<b>MD306 Birmingham New Street to Ashchurch (Excl.) (via Dunhampstead)</b>		
Stoke Works Jn and Blackwell	Up Gloucester	55m 60ch to 53m 20ch

**LNW South Route GI - Dated: 21/10/17**

## IDLING OF DIESEL ENGINES AND CONTROL OF NOISE

To minimise noise nuisance and to avoid the waste of fuel, Drivers must shut down engines in accordance with the following instructions:-

- When standing time is likely to exceed FIVE minutes for a locomotive or multiple unit, or FIFTEEN minutes for an HST, ALL engines must be shut down on arrival (or completion of shunting or other work) at stations, depots, sidings or loops where the train is to be detained.
- Exceptions to this instruction are:
  - During extremely cold weather, when the minimum necessary number of engines may be kept running to maintain acceptable interior heat levels.
  - During extremely hot weather, when the minimum necessary number of engines may be kept running to maintain sufficient air conditioning.
- When specified in Driver's diagrams.
- Certain classes of locomotive as specified in driving instructions e.g. Class 59.
- Drivers must not restart engines earlier than is necessary to ensure a punctual departure.
- At the locations listed in the following table, Drivers must take special care to comply with the above instructions and to avoid sounding the horn other than when it is strictly necessary:

<u>Route</u>	<u>Sections of line Equipped</u>
MD310 Barnt Green Junction to Redditch	52m 62ch (between Barnt Green Single Line Jn and Alvechurch Station Jn) to End of Line

## Locomotives assisting in rear of trains (Table 'J')

5. Trains may be assisted in rear between the places listed below in accordance with Rule Book, Module TW1, Section 15.
6. The assisting locomotive must be coupled to the train except where denoted below by the letter 'N'.
7. Any type of train may be assisted in rear except where denoted below by:
  - F - freight trains only
  - ECS - empty coaching stock trains only
  - P - passenger trains only
8. A shunting locomotive must not be used to assist in rear, nor must a train hauled by a shunting locomotive be assisted in rear except where denoted by the letter 'D'.
9. The locomotive attached in rear of the train must not apply power where denoted below by the letter 'R'.

LNW South Route GI - Dated: 02/11/24

## Obstacle Detection (OD) Level Crossings on LNW Route

OD level crossings work automatically and are similar to CCTV crossings in that they have full barriers, road traffic signals and have protecting signals with telephones linked to the signalbox. Instead of a CCTV camera they use a combination of Radar and Lidar (laser radar) to check that there are no objects or persons within the level crossing before a train approaches. The normal position of the barriers is raised.

The following modules contained within GE/RT8000 are amended when working with OD level crossings:

### **Duties of a level crossing attendant Handbook 18**

Qualified attendants are not permitted to operate an OD crossing until they have been instructed on its use. A copy of the attendant's instructions showing the method of working can be found in the REB at the crossing.

**LNW South Route GI - Dated: 07/06/14**

## Opening droplight or quarterlight windows

Where vehicles are operating with manually opening droplight or quarterlight windows, the Train Operating Company must have a suitable safe system of work to mitigate the risk of injury associated with persons leaning out of windows

**LNW South Route GI - Dated: 16/09/24**

## Operational Decision Making (Previously Dynamic Risk Assessment)

This notice is to advise that Operational Decision Making process is authorised for use under trial conditions.

The purpose of Operational Decision Making Tool is to provide a continuous assessment of risk in the rapidly changing circumstances of an operational incident, in order to implement control measures necessary to make certain of an acceptable level of safety.

Its application should be applied by operational management staff seeking to assess operational system risk, and identify control measures that deliver a safety benefit in rapidly changing operational incidents affecting the normal operation of the railway.

Operational Decision Making can only be facilitated and implemented by those trained to do so.

**LNW South Route GI - Dated: 12/10/2024**

This page is intentionally blank

## RAILWAY CRIME

All railway staff must be vigilant to railway crime and cable theft, and report any suspicious activity on the operational railway, or in the area of electrical substations, to the controlling signaller.

Some examples of suspicious activity could be:

- Anyone not wearing appropriate PPE, or that do not appear to have a safe system of work.
- Anyone not responding to a train drivers warning, or appearing to hide as trains or people approach.
- Vehicles that do not have any company markings or logos
- Signalling location cabinets with doors open or missing, or troughing lids newly disturbed, with no staff nearby.
- People 'loitering' in the area of electrical substations.

In such cases, please inform the controlling signaller as quickly as possible giving precise location details. Drivers do not need to stop their trains immediately to report this, unless they consider it a safety of the line issue.

**National GI - Dated: 30/08/2014**

## Sandite application and rail conditioning trains

1. Types of rail conditioning trains
  - 1.1 The Railhead Treatment Train (RHTT) consists of converted and specially-adapted wagons hauled by a locomotive at each end
  - 1.2 The Multi-Purpose Vehicle (MPV) consists of a specially-built unit with driving cabs at each end.
  - 1.3 Where a DMU is used this consists of a specially modified class 117 or 121.
  - 1.4 All types of train carry out conditioning of the railhead during autumn by a combination of water jetting and the application of sandite traction gel.
2. Speed
  - 2.1 The maximum speed of trains when water jetting and applying sandite is 40mph, except for the West Coast South route where the permitted speed is 60mph when water jetting only.
3. Notices
  - 3.1 Notices will be produced detailing the locations where sanditing and water jetting will take place.
  - 3.2 Operations Control must advise signallers of any deviation from the railhead treatment plan which may be agreed to cater for exceptional circumstances or to treat a problem location not normally treated.
  - 3.3 Signallers must pass details of changes to the booked plan to the train if instructed to do so by Operations Control.
4. Signalling arrangements
  - 4.1 Rail conditioning trains will be described, where possible, by train description code 3Jxx when operating water jetting-only diagrams.
  - 4.2 Rail conditioning trains will be described, where possible, by train description code 3Sxx when operating diagrams that apply sandite.
  - 4.3 Where train describers are not in use the rail conditioning train will be described by special bell signal or special Is Line Clear signal 3-4-2.
  - 4.4 All types of rail conditioning trains may be relied upon to operate track circuits whether applying sandite or not. When applying sandite, signallers must specially observe the passage of the train and the next train to follow over track circuits, where provided.
  - 4.5 Signallers must deal with any failure by the train to operate a track circuit correctly by immediately applying Rule Book Module TS11, Section 14 and advising Operations Control of the failure. Rule Book Module TS1, Regulation 12 must be applied to all subsequent trains over the affected portion of line until at least 2 trains have operated the track circuit normally.

**National GI - Dated: 07/12/13**

## SEMI-AUTOMATIC TRAIN WARNING SYSTEM (SATWAS)

**Only staff who have been trained and hold the required SATWS competence and have received a site-specific briefing on the SATWS operating requirements, are permitted to use the equipment.**

On arrival at the worksite, the SATWS operator must follow the site-specific operating instructions. The signaller must be contacted to advise that the SATWS equipment will be in use and to confirm any specific instructions and arrangements to be implemented prior to any works taking place.

All staff must be aware that:

- To use the SATWS equipment, no single line working, or other degraded working may be in operation.
- A second train may strike-in whilst a warning is in progress for the first train.
- The strike-in train detectors are positioned to provide the minimum required warning time for the fastest trains permitted over the line. Trains travelling at slower speeds or stopping at stations or signals on approach to the worksite, will have extended warning times.

The SATWS-operator must contact the signaller when they have finished using the SATWS equipment. If any additional protection or instructions have been provided, then the signaller shall confirm with the SATWS operator that they are no longer required before removal.

The SATWS system is provided at the following locations:

LOR	Line of Route description	Worksite Area	Section of Line Equipped	Signaller to be contacted
MD301	Rugby to Penkridge (Exclusive) (via Birmingham)	Stechford RBS1 SAS	RBS1 Coventry lines 108m 61ch to 109m 23ch. SAS Grand Junction lines -0m 29ch to 0m 04ch.	WMSC Proof House Workstation

# Explanation of Table A terms and symbols

LOR	Seq.	Line of Route Description	Route	Last Updated
MD0001	001	Explanation of Table A terms and symbols	LNW South	26/10/2024

## Explanation of Table A terms and symbols

### Contents

1. Overview
2. Running lines, loops, sidings and other tracks
3. Signalling
4. Speeds
5. Stations
6. Level crossings
7. Communications
8. Electrification
9. Staff protection
10. Train protection
11. Other abbreviations
12. Key to symbols

### 1. Overview

Each 'Table A' diagram shows all running lines and connections, with their maximum permissible speed shown. Where appropriate, tunnels, stations, level crossings, location names, mileages and other details may additionally be shown.

Each diagram has the following format:

LOR	Seq.	Line of Route Description		ELR	Route	Last Updated
		Location	Mileage M Ch	Running lines & speed restrictions		Signalling & Remarks
		A	B	C		D

The "Running lines & speed restrictions" column (C) shows a NOT TO SCALE map of part of the national rail network. Station platforms, signal boxes, tunnels, level crossings and other infrastructure will be shown. Line names and their maximum permissible speeds will be shown (for the direction of normally signalled moves).

Unless indicated otherwise in column D, all information is shown with the **Down** direction being down the page, and the **Up** direction being up the page.

The "Location" column (A) will provide the name of locations such as stations, tunnels, etc, which will be shown in line with their associated symbol in column C.

The "Mileage" column (B), will provide the mileage of locations in miles and chains. Note: 1 chain = 22 yards = 20.11 metres, with 80 chains in 1 mile. Where a railway line is measured in kilometres only, then this will be made clear on the relevant diagrams, and the column may be renamed as 'Metreage'. Where running lines follow significantly different alignments, a second column B may be shown either immediately to the left or immediately to the right of column C.

The "Signalling & Remarks" column (D) will provide further details such as the type of signalling present on the lines shown, where signalling is controlled from, an explanation of any unusual abbreviations used in column C, and other details relevant to the area shown, such as electrification.

Across the top of the diagram, reading from left to right, are:

- the Line of Route (LOR) code
- the sequence (Seq.) number of the diagram within that LOR
- the LOR description
- the Engineers' Line Reference (ELR) applicable to that part of the railway (more than one ELR may be shown)
- the Network Rail Route that manages that part of the railway shown
- date when the diagram was last updated.

LOR	Seq.	Line of Route Description	Route	Last Updated
MD0001	002	Explanation of Table A terms and symbols	LNW South	26/10/2024

## Explanation of Table A terms and symbols - Continued

### 2. Running lines, loops, sidings and other tracks

Lines are displayed as follows:

- A: Line authorised to carry all types of train, including passenger trains.
- B: Line authorised to carry goods trains or empty coaching stock trains only.
- C: Line authorised to carry all types of train, including passenger trains, but part of another Line of Route. Details of which Table A diagram to refer to will be given.
- D: Line authorised to carry goods trains or empty coaching stock trains only, but part of another Line of Route. Details of which Table A diagram to refer to will be given.
- E: Track classed as a siding.
- F: Other running lines controlled or managed independently of the national rail network, and full details of those lines are not included in the Sectional Appendix (e.g. an adjacent London Underground Line, or metro/tram line).

Each diagram will show the track layout in that particular geographic area, in terms of number of lines, crossovers, connections and so on. It will NOT show track curvature or indicate how wide a 6-foot or a 10-foot there may be between tracks (only in a few exceptional cases will the diagram give an indication of a larger than usual distance between running lines).

The standages of loops and certain sidings will be given in metres and/or yards. These lengths do NOT take into account defensive driving policy or stand-back from signals. A suitable distance must be deducted from the lengths given to allow for this.

### 3. Signalling

The Signalling & Remarks column contains the following details at the top of each diagram, and then again whenever any of those details change:

- ① The mode of signalling applicable to that line. If the mode of signalling is different from one running line to the next (e.g. the Down Main line has track circuit block signalling, whilst the Up Main line has absolute block signalling), then this will be noted further down within the Signalling & Remarks column.
- ② Signalling control location, type (e.g. signal box, power signal box, signalling centre) and signal prefix, shown in brackets. Where relevant, the controlling panel or workstation name will also be listed on a separate line.
- ③ Where shown, the route availability number for the line or lines concerned. Where this detail is NOT shown, the details can be found in the Sectional Appendix Route Clearance tables.
- ④ Where appropriate, the type of electrification and electrical control room responsible for that electrification (see "Electrification" section for further details).

Where any of the above details change, it is assumed (unless stated otherwise) that the new details apply on both lines from that point onwards reading DOWN the diagram.

LOR	Seq.	Line of Route Description	Route	Last Updated
MD0001	003	Explanation of Table A terms and symbols	LNW South	26/10/2024

### Explanation of Table A terms and symbols - Continued

**3. Signalling - Continued**

Mode of signalling  
The following abbreviations will be used in the Signalling & Remarks column to indicate the type of signalling that applies to the running lines shown on that diagram:

AB: Absolute Block.  
C2: (See Western Route Sectional Appendix, General Instructions for details).  
CBTC: Communications-Based Train Control.  
ERTMS L2: European Rail Traffic Management System (Level 2).  
ET: Electric Token Block.  
ETCS Level 2: European Train Control System Level 2.  
ETCS Level 3: European Train Control System Level 3.  
NB: No Block.  
NST: No Signaller Token.  
NSTR: No Signaller Token with Remote Crossing Loops.  
OTS or OT(S): One Train Working where a Staff is provided.  
OTNS or OTN(S): One Train Working where a Staff is not provided.  
RETB: Radio Electronic Token Block (some diagrams will also include the channel number).  
TB: Tokenless Block.  
TB(SC): Scotland Route Tokenless Block.  
TCB: Track Circuit Block.  
TST: Train Staff & Ticket (details will be given in Local Instructions where applicable).

In track circuit block areas of signalling, it is assumed that train detection is by means of track circuits. Where train detection is by means of axle counters, then this will be detailed in the Signalling & Remarks column.

Direction of signalling  
The direction that main aspect signalling applies to, will be indicated by an arrow in the running line, pointing in the appropriate direction:

A: Running line provided with main aspect signalling in one direction only.  
B: Running line provided with main aspect signalling in both directions, with no predominant direction of travel.  
C: Running line provided with main aspect signalling in both directions, with the predominant direction of travel indicated by a double arrow.  
D: Running line provided with main aspect signalling in both directions, but with simplified bi-directional signalling (i.e. fewer signals) in the direction indicated by the white, un-shaded arrow.

It must be remembered that on running lines provided with main aspect signalling in one direction only, it will still be possible to have wrong direction moves in connection with position light signals (e.g. shunt moves) or at junctions. The presence of such shunt signals or signalled wrong direction moves are NOT indicated on Table A diagrams.

Permissive Working  
Running lines on which permissive working is authorised will be detailed in the Signalling & Remarks column. The following abbreviations are used:

PP: Permissive Working - full use for Class 1, 2, 3 ECS, 5, 9 and 0 trains.  
PP-A: Permissive Working - Attaching & Detaching use only for Class 1, 2, 3 ECS, 5, 9 and 0 trains.  
PP-S: Permissive Working - Platform Sharing use only for Class 1, 2, 3 ECS, 5, 9 and 0 trains.  
PP-C: Permissive Working - Contingency use only for Class 1, 2, 3 ECS, 5, 9 and 0 trains.  
PF: Permissive Working for Class 3 to 8 and 0 trains.

LOR	Seq.	Line of Route Description	Route	Last Updated
MD0001	004	Explanation of Table A terms and symbols	LNW South	26/10/2024

## Explanation of Table A terms and symbols - Continued

### 4. Speeds

The maximum permissible speed for a section of line is shown on each running line in miles per hour (mph). Where permissible speeds are given in kilometres per hour, then this will be clearly indicated.

It must be remembered that the maximum permissible speed of a train can be less than the maximum permissible speed of the line over which it travels (e.g. a Class 6 freight train can only run at speeds up to 60mph; Class 156 passenger train rolling stock can only run at speeds up to 75mph). Additionally, all temporary and emergency speed restrictions must be strictly observed, and speed regulated according to signal aspects received.

#### Change of speed

The location of a change in the maximum permissible speed is indicated by an asterisk. The mileage (or metreage) at which the speed change occurs will be shown in the mileage column, along with a further asterisk.

Where another line or lines lead off from the running line (e.g. a loop or additional running line), the maximum permissible speed for that new line will be indicated in the connection and will remain until a change in speed is indicated as normal.

#### Differential speeds

Where a differential speed restriction applies, it is indicated as in the following examples:

40

60

Standard differential speed restriction - i.e. the faster speed applies to passenger, parcels and postal trains (loaded or empty) and light locomotives. The slower speed applies to all other trains.

20<sub>SP</sub>

or 20<sub>SP40</sub>

Non-standard differential speed restriction. This example indicates that Sprinter trains are permitted to travel up to 40mph, and all other trains up to 20mph.

The abbreviations used in the non-standard differential speed restrictions are as follows:

HST: High speed trains

SP: Sprinter multiple unit trains

CS: Class 67 locomotives

MU: Multiple-unit trains

DMU: Diesel multiple-unit trains

EMU: Electric multiple-unit trains

EPS: Enhanced permissible speed, applicable only to Class 390 and Class 221 trains capable of tilting

Other differential speeds not listed above will be clearly detailed in the Signalling & Remarks column.

#### Speeds on bi-directional or single lines

On single and bi-directional lines where different speeds apply in each direction, the speeds are shown together with an arrow head indicating the direction in which they apply. Where possible, the arrow head for the Up direction will be to the left of the running line, and that for the Down direction to the right of the running line (this convention may not always be possible due to constraints on the diagram - e.g. the proximity of other details required to be shown).

On single and bi-directional lines where the same speed applies in both directions, no arrows are shown.

On single and bi-directional lines, an asterisk may indicate a change of speed in one direction only.

#### Un-signed speeds

Unless indicated otherwise, the maximum speed over connections to sidings, depots and yards is 15mph and the maximum speed within sidings, depots and yards is 5mph.

In the Scotland Route Sectional Appendix, in accordance with previous signing practices, some speeds may not be indicated on the lineside by a speed sign. Such speeds are therefore prefixed by a small, angled dash to denote that lineside signs **may not** be provided.

LOR	Seq.	Line of Route Description	Route	Last Updated
MD0001	005	Explanation of Table A terms and symbols	LNW South	26/10/2024
<h2 style="text-align: center;">Explanation of Table A terms and symbols - Continued</h2> <div style="display: flex; justify-content: space-between;"> <div style="width: 48%;"> <p><b>5. Stations</b></p> <p>Station names are shown in <b>CAPITALS</b> in the Location column. The mileage of a station is traditionally where access between platforms was originally provided - e.g. behind the buffer stops at terminal stations, or where the original station footbridge was located. The mileage of a station may therefore not reflect the centre of a station, should platforms have undergone extension at one end, or the station been remodelled.</p> <p>Some stations may not be shown with a specific mileage (or metrage) but will instead show 'start' and 'end' figures to indicate the extents of the station.</p> <p>The operational length of each station platform is given in metres and / or yards. These lengths do NOT take into consideration defensive driving policy or stand-back from signal. A suitable distance must be deducted from the lengths given to allow for this. Where platform lengths are not given, please refer to the relevant table in the General Instructions section of the Sectional Appendix.</p> <p><b>6. Level Crossings</b></p> <p>Level crossings are indicated by the letters LC and then one, or more, of the abbreviations below, following the name of the crossing:</p> <p>Crossings operated by a signaller or crossing keeper:</p> <p>CCTV: Manual level crossing (full barriers), remotely supervised via closed circuit television.</p> <p>MCB: Manned level crossing (full barriers), operated locally by a signaller or crossing keeper.</p> <p>MCG: Manned level crossing (gates), operated locally by a signaller or crossing keeper.</p> <p>OD: Manual level crossing (full barriers), normally automatically operated with obstacle detection.</p> <p>RC: Manual level crossing (full barriers), remotely controlled.</p> </div> <div style="width: 48%;"> <p>Automatic crossings:</p> <p>ABCL: Automatic barrier crossing - road warning lights and barriers monitored by train crew.</p> <p>AHBC: Automatic half-barrier crossing - monitored by signaller.</p> <p>AOCL: Automatic open crossing - road warning lights monitored by train crew.</p> <p>AOCL+B: Automatic open crossing (half-barriers), monitored by train crew. The rules applicable to ABCL level crossings also apply to this type of crossing.</p> <p>R/G: Miniature red/green warning lights (including miniature stop lights (MSL)).</p> <p>The letter "X" shown after the above abbreviations for level crossing types (e.g. AHBC-X) indicates that the crossing concerned also works automatically for movements in the wrong direction.</p> <p>Other crossings:</p> <p>BW: Bridleway crossing.</p> <p>FP: Footpath crossing.</p> <p>OPEN: Open crossing without road warning lights.</p> <p>SBC: Station Barrow Crossing.</p> <p>TMO: Train crew operated.</p> <p>UI: Accommodation / occupation or footpath level crossing equipped with User Information equipment.</p> <p>UWC: User worked crossing.</p> </div> </div>				

LOR	Seq.	Line of Route Description	Route	Last Updated
MD0001	006	Explanation of Table A terms and symbols	LNW South	26/10/2024

### Explanation of Table A terms and symbols - Continued

#### 7. Communications

**A:**  GSM-R

The main form of communication between drivers, guards, other on-train staff, signallers, operations controllers and ECR's, is GSM-R. A railway line provided with GSM-R will be denoted by symbol **A** at the top of the Signalling & Remarks column. Where GSM-R provision ends, then this will be detailed in the Signalling & Remarks column at the appropriate place.

Should GSM-R not be available, then line-side telephones, denoted by symbol **B** above, can be used to contact the signaller in an emergency. Telephones are provided at the following locations:

- at the majority of signals capable of displaying a stop 'Danger' aspect. These telephones are NOT indicated on Table A diagrams.
- at the majority of points forming crossovers and junctions. These telephones are NOT indicated on Table A diagrams.
- at Ground Frames and Ground Switch Panels. These telephones are NOT indicated on Table A diagrams.
- at lockout devices. These telephones are NOT indicated on Table A diagrams.
- at certain level crossings. Level crossings provided with telephones will have symbol **B** shown at the left-hand side of the "Running lines & speed restrictions" column, though on site telephones will be provided on both sides of the railway.
- at certain other locations. These locations will be shown by symbol **B** and their mileage given in the Mileage column (or metreage column, where applicable).

#### 8. Electrification

Where lines are electrified, the type of electrification and the electrical control room (ECR) responsible for the area, will be shown at the top of each page in the Signalling & Remarks column.

The following abbreviations will be used:  
AC: lines electrified with overhead line equipment energised with 25kV alternating current.  
DC: lines electrified with a third rail energised at 750V direct current.  
DC(OLE): lines electrified with overhead line equipment energised with 650/750V direct current.

Adjacent lines that are electrified (e.g. Metro tram lines or London Underground lines) will have their types of electrification noted in the Signalling & Remarks column.

AC overhead line neutral sections are indicated by the letters OHNS and their mileage given in the Mileage column (or metreage, where applicable).

Automatic Power Change Over locations will be shown, for both pantograph raise and pantograph lower locations. Details, including whether the change over is static or dynamic, raise or lower, will also be provided.

LOR	Seq.	Line of Route Description	Route	Last Updated
MD0001	007	Explanation of Table A terms and symbols	LNW South	26/10/2024
<p style="text-align: center;"><b>Explanation of Table A terms and symbols - Continued</b></p> <div style="display: flex; justify-content: space-between;"> <div style="width: 48%;"> <p><b><u>9. Staff protection</u></b></p> <p>The Signalling &amp; Remarks column will provide details of Automatic Staff Warning Systems using one of the following abbreviations:  FWS - Fixed Warning System.  TOWS - Train Operated Warning System</p> <p>The "Signalling &amp; Remarks" column will provide details of lockout devices (LOD) and the lines that they cover. The different types of lockout are as follows:  LOD(E): this type of lockout prevents train movements from being made in both directions, either into or out of the protected area, and is a captive key system where the key is normally retained in the lockout device.  LOD(K): this type of lockout prevents trains from entering the protected area in both directions, but does not prevent train moves within the area or going out of the area. This is a captive key system where the key is normally retained in the lockout device.  LOD(P): this type of lockout prevents signalled train movements from being made in the 'wrong' direction, where the line has been signalled for bi-directional working. This is a key enabled system where the authorised user must obtain the key before operation can commence.  LOD(T): this type of lockout prevents all signalled moves into the area from being made, but not moves within, or going out of, the protected area. It also prevents moves from being made to signals where the overlap of the route set would be in the protected area. This is a key enabled system where the authorised user must obtain the key before operation can commence.</p> <p>Full details of the protection afforded is as defined in the lineside case.</p> </div> <div style="width: 48%;"> <p><b><u>10. Train protection</u></b></p> <p>Unless otherwise stated in the Signalling &amp; Remarks column, it is assumed that AWS (Automatic Warning System) and TPWS (Train Protection Warning System) is provided on all running lines. Additionally, it is assumed that TPWS is provided at all main aspect signals at the exits from sidings, where the signal controls moves out onto a main running line.</p> <p>The provision of TASS (Tilt Authorisation &amp; Speed Supervision system) and ATP (Automatic Train Protection) will be detailed in the Signalling &amp; Remarks column.</p> </div> </div>

### 11. Other abbreviations

In addition to the abbreviations already listed (e.g. for type of signalling or type of level crossing), the following abbreviations may also be used on Table A diagrams without explanation:

Line name abbreviations:

U: Up	D: Down
UM: Up Main	DM: Down Main
UF: Up Fast	DF: Down Fast
US: Up Slow	DS: Down Slow
UE: Up Electric	DE: Down Electric
UR: Up Relief	DR: Down Relief
UA: Up Avoiding	DA: Down Avoiding
UG: Up Goods	DG: Down Goods
USB: Up Suburban	DSB: Down Suburban
UPL: Up Passenger Loop	DPL: Down Passenger Loop
UGL: Up Goods Loop	DGL: Down Goods Loop
URS: Up Refuge Siding	DRS: Down Refuge Siding
CL: Crossing Loop (in single line)	U&D: Up & Down

Signalling control abbreviations:

SB: Signal box.	GF: Ground Frame.
PSB: Power signal box.	EGF: Emergency Ground Frame.
SCC: Signalling control centre.	GSP: Ground Switch Panel.
SC: Signalling centre.	SF: Shunt Frame.
IECC: Integrated Electronic Control Centre.	
ROC: Rail Operations Centre.	

Infrastructure abbreviations:

C: Catch points, unworked	C&P: Clipped and padlocked out of use.
CW: Catch points, worked.	HABD: Hot Axle Box Detector.
Jn: Junction.	WILD: Wheel Impact Load Detector.

Railway lines of route abbreviations:

LUL: London Underground Ltd	HS1: High Speed 1.
CTRL: Channel Tunnel Rail Link (HS1).	HS2: High Speed 2.
WCML: West Coast Main Line.	CCOS: Crossrail Central Operating Section.
ECML: East Coast Main Line.	

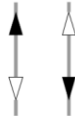

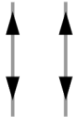

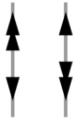

Other abbreviations which may be used without explanation:

OOU: Out of use.	
TEP: Token Exchange Point - applicable to lines signalled using the 'Radio Electronic Token Block' or the 'No Signaller Token with Remote Crossing Loops' methods of signalling.	
CTLP: Crossing the line procedure.

### 12. Key to symbols

	'Passenger' line. Line authorised to carry all types of train, including passenger trains.		Other running line where full details are NOT included in the Sectional Appendix (e.g. an adjacent London Underground Line, or adjacent metro / tram line).		Running lines, signalled in both directions, but with simplified bi-directional signalling (i.e. fewer signals) in the direction indicated by the white, un-shaded arrow.
	'Goods' line. Line authorised to carry goods trains or empty coaching stock trains only.		Running lines, signalled in only one direction.		Buffer stops - these will be the same thickness as the lines on which they are located.
	Siding or a line classed as a siding.		Running lines, signalled in both directions.  Where a running line is signalled in both directions, and there is a predominant direction of travel, then the line may be shown with double-arrows indicating the predominant direction of travel.		Sand drag.
	Other running lines, but belonging to another Line of Route (LOR). The left-hand line is a 'passenger' line, the line on the right is a 'goods' line.				Catch points. C: Un-worked. CW: Worked. D: De-railer. Example shows worked catch points in the Down line only.

 <p>Maximum permissible speed of the line concerned (example shows 60mph for both Up and Down lines).</p>	 <p>Maximum permissible speed of the line concerned, carried forward from previous page (example shows 60mph for the Down Main line).</p>	 <p>Level crossings, where trains must be brought to a stand before proceeding over the crossing. An arrow or the prefix 'A' may be used. The previous permissible speed resumes beyond the crossing, unless otherwise shown.</p>
 <p>Maximum permissible speed of the line concerned, where the speed is the same in both directions (line is signalled bi-directionally).</p>	 <p>Level crossing, with name and type of crossing in the Location column.</p>	 <p>Lines shown provided with GSM-R equipment and coverage.</p>
 <p>Maximum permissible speed of the line concerned, where different speeds apply depending on direction of travel. The adjacent arrow indicates in which direction the speed applies. The adjacent arrow may be connected by a thin line to the running line to which the speed applies.</p>	 <p>Level crossings, with right direction approach speeds. An arrow or the prefix 'A' may be used. The previous permissible speed resumes beyond the crossing, unless otherwise shown.</p>	 <p>Lineside telephone, not associated with a signal, points, ground frame or lockout device.</p>
 <p>Change in maximum permissible speed, with mileage provided in the mileage column along with a further star.</p>	 <p>Level crossing with wrong direction approach speed.</p>	 <p>Network Rail boundary; Network Rail Route boundary; Sectional Appendix boundary, with details shown.</p>

## MD140 - BLETCHLEY TO BEDFORD ST JOHNS (INCLUSIVE)

### Bletchley Hopper Siding

**General:** Bletchley Hopper Siding is located adjacent to the Up Vale line at Bletchley Station. The siding contains a bottom discharge unit for aggregate material. The siding can be accessed at the South End through a trailing connection from the Up Slow at Bletchley South Jn and via the Vale Refuge Siding at the North End.

**Person in Charge (PIC):** When taking up duty the PIC must provide their name and mobile telephone number to the Bletchley Workstation Signaller at Rugby SCC on telephone 03308542628. and report to the signaller when their turn of duty is completed. The PIC may contact the Signaller for signalled shunt moves.

All points at the North End of the Bletchley Hopper Siding onto the Vale Refuge Siding are hand operated and the PIC of any movement within Bletchley Hopper Siding complex must ensure hand points are set in the correct position for the movement.

#### Arrivals:

The PIC shall ensure all hand points are set correctly within the siding complex prior to the trains arrival.

Aggregate trains destined for Bletchley Hopper Siding will normally arrive from the north and will arrive at either Bletchley Station on either the Up Slow (Platform 4) or Bletchley Relief No.2 (Platform 5) to be met by the PIC. Upon arrival the PIC shall hand a Radio to the train driver and must reach a clear understanding with the Driver and Signaller concerning the movements to access the Bletchley Hopper Siding. The train shall then draw forward onto the Up Slow with the rear of the train arriving behind Signal TK1463 or Signal TK1461. The PIC shall confirm to the Signaller when the rear of the train is clear of Signal TK1463 or Signal TK1461 and shall advise the Signaller that the train is ready to propel into Bletchley Hopper Siding. The PIC shall ensure that Signal TK1463 or Signal TK1461 is displaying a proceed aspect before authorising the propel movement with the Driver into Bletchley Hopper Siding.

Upon arrival the Locomotive shall run round the train via the Vale Refuge Siding, Up Vale and Up Slow. The PIC shall confirm to the Signaller when the run round is complete

#### Departures:

Once train preparation duties have been completed, the PIC shall complete a brake test. The PIC shall authorise a propel movement and bring the rear of the train to a stand at Signal TK9848. The PIC shall contact the Signaller to advise the train is ready to depart and obtain permission to clear Signal TK9848. Providing no conflicting movements have been authorised the Signaller shall clear Signal TK9848. The PIC shall authorise the propel movement with the Driver from Signal TK9848 onto the Up Slow until the locomotive has arrived behind Ground Position Signal TK1463. The PIC shall confirm to with the Signaller when the train has come to a stand at Ground Position Signal TK1463. The Signaller shall clear Signal TK1463 upon scheduled departure.

**Dated: 10/04/2021**

**MD140 - BLETCHLEY TO BEDFORD ST JOHNS (INCLUSIVE)****FENNY STRATFORD**

**Failure of signals controlling movements to and from the Up & Down Vale and Up & Down Bletchley Chord single lines.** During a failure of track circuits on either Single line, Working by Pilotman **will not be** introduced providing movements are made in **one direction only** or on an unaffected route. The Signaller at Marston Vale SCC will advise the Driver of the circumstances and will be authorised to pass the signal controlling the entrance to the affected portion of line at Danger. If this cannot be achieved, then a Pilotman must be appointed who must personally despatch or accompany each train.

**Dated: 17/08/13****MD140 - BLETCHLEY TO BEDFORD ST JOHNS (INCLUSIVE)****RIDGMONT**

**Before the Signaller at Marston Vale S.C.C. authorises** a movement that may proceed on the

Up Main line to Ridgmont for a reversal movement to the Down Main line via signal MV.105, then the Signaller will first ensure that the following actions are carried out.

The Signaller will maintain signal MV.18 (signal in rear of MV.105 signal) on the Up Main line at Danger and when the Driver makes contacts from the signal post telephone, the Signaller will inform him/her that signal MV.105 is ground mounted and positioned in the six foot.

**Dated: 07/10/06****MD140 - BLETCHLEY TO BEDFORD ST JOHNS (INCLUSIVE)****Kempston Hardwick LC (AHBC-X)**

**A plunger is provided** in a sealed cabinet adjacent to signal MV.31 on the Down platform which is opened by a number 1 key. In the event of a failure of a train in the Down platform, which has been standing for a period of time, the Driver or Conductor must operate the plunger when requested to do so by the Signaller at Marston Vale SCC.

The route is not to be set beyond MV31 for down main services that are booked to stop at Kempston Hardwick until the driver has confirmed to the signaller that they are ready to depart the platform. This confirmation will be communicated via a 'waiting signal' text on the GSM-R.

**Dated: 08/05/2022****MD140 - BLETCHLEY TO BEDFORD ST JOHNS (INCLUSIVE)****Stewartby Forders Sidings**

**General:** Forders Sidings are located adjacent to the Arrival and Departure to the north of Stewartby station.

**To facilitate moves to from the reopened Waste Terminal at Stewartby Forders Siding**

Trains will arrive from the Down Main into the Arrival and Departure Line. and stop at MV157 signal. Train will then draw forward onto the Down Main to allow the rear vehicle to be behind MV246 signal, before then propelling into the terminal from MV246 (preferred). If Wootton Broadmead CCTV level crossing needs to be cleared then the train must proceed on the Down Main so the rear of the train is behind MV250 signal before propelling into the terminal.

**Dated: 09/09/2024****MD145 - CAMDEN ROAD WEST JUNCTION TO CAMDEN JUNCTION****PRIMROSE HILL (closed), site of**

Drivers of dual-electric trains on the Down Primrose Hill line should not commence traction changeover from AC to DC until signal WM801 has been cleared for the DC Electric lines, or until instructed otherwise by the signaller.

**Dated: 28/06/14**

## MD410 - COVENTRY NORTH JN. TO NUNEATON SOUTH JN.

### Coventry North Yard

#### Stabling of West Midlands Trains units

**Sidings 1 and 2 are used for the stabling of West Midlands Trains units.**

**Arriving trains.** Drivers of units requiring to stable in the North Yard must contact the Signaller at West Midlands S.C. – Coventry workstation and advise him / her of the details of the train formation (unit number(s) and number of vehicles) and agree with the Signaller which siding the train will be stabled in. Upon clearance of the appropriate signal controlling movements into the Yard, the Driver may proceed and bring the train to a stand at the 'Check Handpoints' board adjacent to signal CB.7054 and ensure that any handpoints within the required route to Siding 1 or 2 are set in the correct position. Drivers must stable the unit(s) at the extreme (Nuneaton) end of Siding 1 or 2 and ensure that vehicles are not left standing foul of any adjoining siding. The Driver of unit(s) arriving into an already occupied siding must stable the unit(s) at least 2 metres (6'6") away from any other stabled unit(s), ensuring that the rear of their train formation is not left standing foul of any adjoining siding. If pantographs are to be lowered on Electric Multiple Units after stabling, then the Driver must ensure that an emergency tail lamp is placed on the rear vehicle.

**Departing trains.** All trains will normally depart from the station end of the Yard. Drivers of trains which are ready to depart must bring their train to a stand at the 'Stop - Await Instructions' board and contact the Signaller at West Midlands S.C. – Coventry workstation to obtain permission to pass the 'Stop - Await Instructions' board before proceeding towards signal CB.7054. The Driver must also advise the Signaller details of the train formation (unit number(s) and number of vehicles). Upon clearance of signal CB.7054 the Driver may proceed towards Coventry station.

**Dated: 19/10/2024**

## MD410 - COVENTRY NORTH JN. TO NUNEATON SOUTH JN.

### Prologis Park Siding & Yard

**General:** Prologis Park Siding is located off a connection to the Down Bedworth at Three Spires Junction and leads to Prologis Park Yard.

Only one train is permitted to be on Prologis Park Siding at a time.

**Person in Charge (PIC):** When taking up duty the PIC must provide their name and mobile telephone number to the Coventry Workstation Signaller at West Midlands SCC on telephone 0121 345 5720 and report to the Signaller when their turn of duty is completed.

#### **Arrivals:**

Trains destined for Prologis Park Yard will arrive on the Prologis Park Siding from the Down Bedworth Line only. The PIC must be on duty prior to the inward bound service passing through Coventry Station. The Coventry Workstation Signaller will contact the PIC and obtain permission for the train movement to enter Prologis Park Siding. The Signaller will route the service onto the Siding and the train Driver shall bring the train to a stand at 'Stop' board DC1 A.

Upon arrival at the 'Stop' board DC1 A the PIC will hand a Radio to the train driver and must reach a clear understanding with the Driver concerning the movements to access Prologis Park Yard. The PIC will grant authority to the Driver to pass over Wheelwright Lane level crossing and proceed into Prologis Park Yard. The PIC shall complete this movement and shall contact the Coventry Workstation Signaller to confirm the train has arrived in clear of Signal CN7540. The PIC shall split the train into portions within the Sidings and ensure the train is secure.

#### **Departures:**

The PIC shall marshal the train within the Yard and complete a brake test. The PIC will contact Coventry Workstation Signaller to obtain permission for a movement to pass 'Stop' board DC1 B and proceed the train towards Signal CN7540 ready for departure.

**Dated: 15/08/2020**

## MD410 – COVENTRY NORTH JN TO NUNEATON SOUTH JN

### Bedworth Terminal

**General:** Bedworth Terminal consists of 2 sidings located adjacent to the Down Bedworth approximately 1 mile to the West of Bedworth Station. Both sidings are 600ft / 183m. Access to the Sidings is via Up Bedworth only. Trains must arrive in the Up Direction.

Calor Gas Sidings Ground Frame is situated at the entrance into the Sidings in the Down Bedworth cess. The Ground Frame is released with Rugby SCC.

**Person in Charge (PIC):** When taking up duty the PIC must provide their name and mobile telephone number to the Nuneaton Panel Signaller at Rugby SCC on telephone 0330 8542631 and report to the signaller when their turn of duty is completed.

All points within the Bedworth Terminal are hand operated and the PIC of any movement within the Siding complex must ensure hand points are set in the correct position for the movement.

#### Arrivals:

Prior to arrival, the PIC shall ensure the gates are opened and shall inform the Signaller that they are on site ready to accept the service prior to any inward bound service passing Nuneaton.

The train shall arrive on the Up Bedworth Line opposite Calor Gas Sidings Ground Frame. Upon arrival the PIC shall hand a Radio to the Driver and conduct a radio test. The PIC must reach a clear understanding with the Driver concerning the movements to access Bedworth Terminal. The Driver of the train shall draw forward and shall bring the rear of the train to a stand under the instruction of the PIC behind 1A Point on the Up Bedworth. The PIC shall contact the Signaller to obtain the Ground Frame release. The PIC shall ensure the points are set correctly before authorising the propel movement with the Driver into Bedworth Terminal. The PIC shall split the train over two sidings as necessary and secure each train portion. The PIC shall return the Ground Frame release and contact the Signaller to confirm that release has been restored.

#### Departures:

Prior to departure, the PIC shall ensure the gates are opened and will authorise the Driver to draw the train down to CN1558 'Stop and Await Instructions Board'. Upon arrival the PIC shall contact the Signaller to obtain the Ground Frame release. Upon release, the PIC shall check the points are set correctly before authorising the driver to pass CN1558 'Stop and Await Instructions Board' with the first portion of the train, bringing the rear of the train to a stand under the instruction of the PIC. The PIC shall reset the terminal hand point and authorise the Driver to propel the first portion of the train, coupling to the second portion of the train.

The PIC shall conduct a brake test. The PIC shall instruct the Driver to depart the train and obey all further Signals. Once the train has departed and cleared 1A Points on the Up Bedworth the PIC shall return the Ground Frame release and contact the Signaller to confirm that release has been restored.

Trains returning towards Nuneaton can perform a run round at Hawkesbury Lane Reception Line or Coventry North Yard.

**Dated: 17/06/2023**

## MD460 - FENNY COMPTON TO BURTON DASSETT

### Fenny Compton Jn To Burton Dassett Kineton MOD

#### Kineton Junction To Burton Dassett Kineton MOD

**Access to the Kineton Branch** is given by the release of a captive key instrument (lockout device or similar) positioned in a lockable cabinet at the Burton Dassett end of Kineton Siding 1 or 2, released by the signaller at WMSC Cherwell Valley workstation.

#### Working of movements between Kineton Siding 1 or 2 and Burton Dassett

The driver must bring his train to a stand at OL5159 or OL5157 Stop Obtain Token Before Proceeding Boards located at the Burton Dassett end of Kineton Siding 1 or 2 and request a token release.

The signaller at WMSC Cherwell Valley workstation will contact the MOD Traffic Controller at Kineton and obtain an assurance that all MOD movements in the Exchange Sidings towards the Boundary Gate have ceased and the single line is clear to the 'Start of Token Section' board at Burton Dassett. The signaller will then give the 'release' to enable the driver to withdraw the token.

The driver must then check the trailing handpoints and set the route to the correct position before proceeding. The driver must bring the train to a stand at the End of Single Line board at Burton Dassett and work to the instructions of the MOD Traffic Controller at Kineton.

The driver must retain custody of the token until arrival back at Kineton No.1 or 2 sidings, except in cases where additional movements are required (see below).

#### Working of movements between Burton Dassett and Kineton No.1 or 2 sidings

Before the MOD Traffic Controller at Kineton authorises a movement to depart from Kineton MOD Sidings to Kineton Sidings 1 or 2, he/she must obtain authority for that movement to proceed from the signaller at WMSC Cherwell Valley workstation.

Upon arrival at the End of Single Line board at Fenny Compton, the driver must contact the signaller at WMSC Cherwell Valley workstation for permission to proceed into Kineton No.1 or 2 Sidings. The driver must then check the facing hand points and set the route to the correct position before commencing the movement.

When the movement has come to a stand in Kineton Siding.1 or 2 the driver must, before replacing the token in the token instrument machine, confirm to the signaller at WMSC Cherwell Valley workstation that the train is clear of the single line complete with tail lamp. The driver must then confirm to the signaller at WMSC Cherwell Valley workstation when the token has been returned to the token instrument machine.

The driver must confirm to the signaller at WMSC Cherwell Valley workstation that the train is complete with tail lamp.

#### Additional movement between Kineton No.1 or 2 Sidings and Burton Dassett

In the event that a second movement is required to operate from **Kineton No.1 or 2** Sidings to Kineton MOD Sidings, the MOD Traffic Controller at Kineton must confirm to the signaller at WMSC Cherwell Valley workstation that the previous train has departed clear of the Single line and is inside Kineton MOD Sidings. The driver of that train will then surrender the token to the nominated MOD representative who will arrange the return of the token by road transport to the token instrument machine located within the lockable cabinet at Fenny Compton Sidings.

#### Additional movement between Burton Dassett and Kineton No 1 or 2 Sidings

In the event that a second movement is required to operate from Kineton MOD Sidings to Kineton No 1 or 2 Sidings then the driver of the first movement will replace the token in the token instrument machine located within the lockable cabinet at Kineton Sidings. The nominated MOD representative will arrange for the token to be withdrawn from the token instrument machine and convey the token by road transport and issue to the driver of the second movement. The token will not be released by the signaller until it has been confirmed that the first train is complete with tail lamp.

**Dated: 08/08/2016**

## MD501 - TAMWORTH (INCLUSIVE) TO BIRMINGHAM, PROOF HOUSE JUNCTION

### Kingsbury Shunt Frame (KY)

**General:** Kingsbury Shunt Frame, Branch, Oil & Scrap Sidings are situated adjacent to the Down Derby between Wilnecote and Kingsbury Jn at Kingsbury Branch Jn. Birmingham ROC Water Orton Workstation Signaller controls the Derby Lines and gives electrical release to Kingsbury Shunt Frame to operate points and signals for movement to and from the sidings linking to the Birch Coppice single line.

**Person in Charge (PIC):** The PIC at this location is the DB Cargo Yard Supervisor located in Kingsbury Shunt Frame.

#### Arrivals:

Prior to any schedule arrivals, the Water Orton Workstation Signaller shall contact the PIC to confirm the estimated arrival time allowing the PIC to avoid conflicts within the Kingsbury Siding complex. The PIC shall ensure all hand points are set correctly within the siding complex prior to a train's arrival.

The Water Orton Workstation Signaller shall contact the PIC when a train is approaching Kingsbury Branch Jn.

For Up direction arrivals, the PIC shall obtain the electrical slot release from the Water Orton Workstation Signaller and set the route for the service to enter the sidings ensuring all shunt frame indicators are lit. The train will be signalled from WW4822 on the Up Derby Line across Kingsbury Branch Jn into Kingsbury Oil or Branch Sidings. Once the rear of the train has arrived in clear of Signal KY20/21 the PIC shall return the electrical slot release to the Water Orton Workstation Signaller allowing the mainline route to normalise for passage of trains.

Trains bound for Birch Coppice Terminal shall draw down Branch Siding No.1 and shall arrive at the 'Stop and Telephone' Board. The driver shall contact the PIC to obtain permission to draw towards 'Stop Board A' on the single line to Birch Coppice.

For Down direction arrivals, the driver shall bring the approaching train to a stand on the Down Derby Line at Kingsbury Branch Jn and the PIC shall hand a radio to the driver, complete a radio test and come to a clear understanding regarding the shunt movements. The driver of the inward train shall draw the train past Kingsbury Branch Jn and shall bring the rear of the train to a stand behind Ground Position Signal KY24 under the instruction of the PIC.

The PIC shall obtain the electrical slot release from the Water Orton Workstation Signaller and set the route for the service to enter Kingsbury Oil or Branch Sidings ensuring all shunt frame indicators are lit. The clearance of Ground Position Signal KY24 will illuminate the set-back 'Off' indicators located along the Down Derby cess.

The driver shall propel the train under control of the PIC. The train must arrive in clear of Signal KY20/21. The PIC shall return the electrical slot release to the Water Orton Workstation Signaller allowing mainline route to normalise for passage of trains.

The PIC shall shunt the train to its destination as necessary. Prior to authorising any move through the shunt frame, the PIC must ensure and check the route has been set correctly by observing Signal KY20/21, the shunt frame panel and the shunt frame levers.

#### **Departures:**

Trains from Birch Coppice Terminal shall draw down the single line to 'Stop Board A'. Upon arrival the driver shall contact the PIC to request permission to pass 'Stop Board A' and draw the train down to the 'Stop' Board protecting Kingsbury Shunt Frame.

Trains departing Kingsbury Oil or Scrap Sidings shall be marshalled together under control of the PIC before completing a brake test. The train shall be ready and stationary at the 'Stop' Boards on either Oil Sidings that protect Kingsbury Branch Jn. Prior to the scheduled departure time the PIC shall contact the Water Orton Workstation Signaller and obtain the electrical slot release at the Shunt Frame to set up the correct routing for the train to departure from Signal KY20/21.

For trains departing in the Down direction, the PIC shall authorise the driver past the 'Stop' Board and draw forward to KY20/21 and wait for the signal to clear. The train shall depart at 5mph until the rear of the train has cleared Kingsbury Branch Jn. The PIC shall return the electrical slot release to the Water Orton Workstation Signaller allowing mainline route to normalise for passage of trains.

For train departing in the Up direction, the PIC shall hand a radio to the driver and come to a clear understanding regarding shunt movements. The driver shall propel the train under control of the PIC passing 'Stop' Board and Signal KY20/21. The train shall propel across Kingsbury Branch Jn onto the Up Derby Line. The driver shall hand the radio to the PIC as the locomotive passes KY20/21 and continue the propel movement across Kingsbury Branch Jn until the locomotive has arrived behind Signal WW4822.

The PIC shall observe the movement throughout. Upon arrival behind WW4822, the PIC shall return the slot release to the Water Orton Workstation Signaller allowing mainline route to normalise for passage of trains. The Water Orton Workstation Signaller shall clear Signal WW4822 on the Up Derby Line. The PIC shall observe the train passing Kingsbury Branch Jn.

**Dated: 02/11/2024**

## **MD501 - TAMWORTH (INCLUSIVE) TO BIRMINGHAM, PROOF HOUSE JUNCTION**

### **Kingsbury Jn To WATER ORTON**

**Trains diverted via Whitacre West Junction.** Down and Up trains booked to travel direct, may be diverted via Whitacre West Junction without previous warning. Drivers so routed need not observe the requirements of Rule Book, Module S7, Section 1.2.

**Dated: 07/12/13**

**THIS PAGE IS INTENTIONALLY BLANK**

## **MD501 - TAMWORTH (INCLUSIVE) TO BIRMINGHAM, PROOF HOUSE JUNCTION**

### **Up Washwood Heath Sidings**

**General:** Up Washwood Heath Sidings consists of 3 sidings. There are 2 through sidings with bottom discharge units for aggregate material and 1 cripple siding accessible only via the East end of the site. The sidings can be accessed through a single access at the East End of the site and via two Arrival/Departure roads at West end of the site all connecting to the Up Derby Slow. The length of the 2 through sidings are 767m/2516ft.

All points within the Up Washwood Heath Sidings are hand operated and the PIC of any movement must ensure hand points are set in the correct position prior to the movement.

Person in Charge (PIC): When taking up duty the PIC must provide their name and mobile telephone number to the Washwood Heath Workstation Signaller at Birmingham ROC on telephone 0121 576 2011 and report to the signaller when their turn of duty is complete. The PIC may contact the Signaller for signalled shunt moves.

#### **Arrivals:**

The PIC must advise the Washwood Heath Workstation Signaller that they are on site and the access gates are open 30 minutes prior to arrival and advise they are ready to accept the service.

Trains arriving from the West end are signalled towards 'Stop and Telephone board' WP8946 on the Up Washwood Heath Arrival/Departure No.1 or 'Stop and Telephone board' WP8948 on the Up Washwood Heath Arrival/Departure No.2, where the train shall be met by the PIC. Upon arrival the PIC shall hand a Radio to the train driver and must reach a clear understanding with the Driver concerning movements to access Up Washwood Heath Sidings.

Trains arriving from the East direction are signalled on to the arrival/departure access line. The Driver shall stop short of the 1st set of points and be met by the PIC. Upon arrival the PIC shall hand a Radio to the train driver and must reach a clear understanding with the Driver concerning the movements to access Up Washwood Heath Sidings.

#### **Departures:**

Trains departing towards the West: The PIC shall marshal the train within Up Washwood Heath Sidings and complete a brake test. The PIC shall contact the Signaller to advise the train is ready to depart. The PIC shall collect the Radio from the Driver prior to the train departing and give the Driver authority to pass the 'Stop and Telephone' board to draw up towards Signal WP8893 on the Up Washwood Heath Arrival/Departure No.1 or Signal WP8895 on the Up Washwood Heath Arrival/Departure No.2. The Signaller shall clear Signal WP8893 or Signal WP8895 upon scheduled departure. The PIC shall secure the access gates and confirm with the Signaller that their turn of duty is complete.

Trains departing towards the East: The PIC shall marshal the train within Up Washwood Heath Sidings and complete a brake test. The PIC shall contact the Signaller to advise the train is ready to depart. The PIC shall collect the Radio from the Driver prior to the train departing and give the Driver authority to pass the 'Stop and Telephone' board to draw up towards Signal WP8864 on the single line Arrival/Departure line. The Signaller shall clear Signal WP8864 upon scheduled departure. The PIC shall secure the access gates and confirm with the Signaller that their turn of duty is complete.

**Dated: 02/11/2024**

## MD501 – TAMWORTH (INCLUSIVE TO BIRMINGHAM, PROOF HOUSE JUNCTION)

### Former Saltley Depot (Saltley L.I.P) and European Metals Recycling (EMR) Sidings

**General:** Former Saltley Depot (also known as the Saltley L.I.P), and European Metals Recycling (EMR) Sidings are located off the Down Saltley Goods Loop adjacent to Landor St Junction. The length of EMR No.1 & No.2 Siding is 235m / 770ft

**Person in Charge (PIC):** When taking up duty for EMR services the PIC must provide their name and mobile telephone number to the Washwood Heath Workstation Signaller at Birmingham ROC on Telephone 0121 576 2011 and report to the Signaller when their turn of duty is completed. The PIC may contact the Signaller for signalled shunt moves.

All points within both the Former Saltley Depot and EMR Sidings complex are hand operated. The PIC of any movement within the Sidings must ensure hand points are set in the correct position for the movement.

#### Arrivals:

##### Former Saltley Depot :

If there is no PIC on duty, the Signaller may authorise a light engine movement only.

The Driver of an arriving locomotive must bring the movement to a stand at the 'Stop and Check Points' board. The Driver must check that the hand points are in the correct position before proceeding onto the single siding.

##### European Metals Recycling Sidings:

Trains destined for EMR Sidings will arrive on the Down Saltley Goods Loop. Trains that arrive from the Water Orton direction are required to conduct a locomotive run round on the Tyseley Through Sidings. The train will arrive on the Down Saltley Goods Loop via Landor St Junction. All arriving trains are propelled into the site from the Down Saltley Goods Loop.

Upon arrival on the Down Saltley Goods Loop the PIC will hand a Radio to the train driver and must reach a clear understanding with the Driver and the Washwood Heath Workstation Signaller concerning the movements to access the EMR Sidings. The PIC will check all hand points are set correctly, advise the Signaller that the train is ready to propel into EMR sidings and ensure that the Position Light on Signal WP8911 is cleared. The PIC shall split the train into portions within the EMR Siding and ensure the train is secure. The PIC may request Signal WP1898 is cleared for shunting movements if necessary.

During a wagon set turn over shunt, the PIC may request Signal WP1898 is cleared for shunting movements if necessary.

#### Departures:

##### Former Saltley Depot:

Before departure, the Driver of a departing locomotive must obtain permission to proceed towards Signal WP1898 from the Washwood Heath Workstation Signaller. When permission has been obtained the Driver must ensure that no other movements are taking place before proceeding towards Signal WP1898. If the Signaller is unable to give permission for the movement, they will instruct the Driver to request permission again after a given period.

##### European Metals Recycling Sidings:

The PIC shall marshal the train within the EMR Sidings and complete a brake test. The PIC may request Signal WP1898 is cleared for shunting movements if necessary. The PIC will contact the Washwood Heath Workstation Signaller to obtain permission for the train to depart Signal WP1898 onto the Down Saltley Goods Loop.

#### Shunting Movements:

When shunt movements are required the PIC must advise the Washwood Heath Workstation Signaller that a movement is about to commence. The Signaller will give permission providing no other movement has been authorised. Once all shunting movements have been completed the PIC must advise the Washwood Heath Workstation Signaller.

Signal WP1898 is set to return to danger after each movement. It is imperative that all Drivers are aware of this when making repeat shunting movements in proximity of this Signal and that they ensure the Signal is cleared prior to making any movements beyond it.

**Dated: 02/11/2024**

## MD501 - TAMWORTH (INCLUSIVE) TO BIRMINGHAM, PROOF HOUSE JUNCTION

### Bromford Bridge JLR

**General:** Bromford Bridge JLR Sidings consists of two sidings located off the Up Bromford No.1 Siding adjacent to the Up Derby Slow. The length of the Up Bromford No.1 Siding is 658m/ 2159ft.

All points within the Bromford Bridge JLR complex and the Up Bromford Sidings are hand operated and the PIC of any movement must ensure hand points are set in the correct position prior to the movement.

**Person in Charge (PIC):** When taking up duty the PIC must provide their name and mobile telephone number to the Washwood Heath Workstation Signaller at Birmingham ROC on Telephone 0121 576 2011 and report to the Signaller when their turn of duty is completed. The PIC may contact the Signaller for signalled shunt moves.

#### Arrivals:

Trains that arrive from the Water Orton direction will arrive at Signal WP9867 on the Up Derby Slow.

Upon arrival the PIC shall hand a Radio to the train driver and must reach a clear understanding with the Driver and Signaller concerning the movements to access Up Bromford Sidings. The train will then draw forward towards Signal WP9881. The PIC shall confirm to the Signaller when the rear of the train is clear of Ground Position Signal WP1858. The PIC shall check all hand points are set correctly, advise the Signaller that the train is ready to propel into Bromford Bridge No.1 Siding and ensure that Ground Position Signal WP1858 is displaying a proceed aspect before authorising the propel movement with the Driver into Up Bromford No.1 Siding. The PIC shall confirm to the Signaller when the locomotive is inside clear of Signal WP8869. The PIC shall split the train into portions within the JLR Sidings and ensure the train is secure.

Trains that arrive from the Washwood Heath direction are signalled from Signal WP6862 on the Up Derby Slow to Ground Position Signal WP1858 where the train will be met by the PIC. Upon arrival the PIC shall hand a Radio to the train driver and must reach a clear understanding with the Driver and Signaller concerning the movements to access Up Bromford Sidings. The train shall draw forward from Signal WP1858 into Up Bromford No.1 Siding. Upon arrival the Locomotive shall run round the train via Up Bromford No.2 Siding. The PIC shall confirm to the Signaller when the run round is complete. The PIC shall split the train into portions within the JLR Sidings and ensure the train is secure.

#### Departures:

Trains departing towards Washwood Heath: The PIC shall marshal the train within the Up Bromford Sidings and complete a brake test. Once train preparation duties have been completed a movement that is ready to depart will proceed on the authority of the PIC to Signal WP8869. The PIC shall contact the Signaller to obtain permission for the train to depart Signal WP8869 onto the Up Derby Slow.

Trains departing towards Water Orton: The PIC shall marshal the train on the Up Bromford No.1 Siding and complete a brake test. Once the run round move is complete the PIC shall reach a clear understanding with the Driver concerning the propel movement onto the Up Derby Slow. The PIC shall contact the Signaller to advise the train is ready to depart and obtain permission to clear Signal WP8869. Providing no conflicting movements have been authorised the Signaller shall clear Signal WP8869. The PIC shall authorise the propel movement with the Driver from WP8869 onto the Up Derby Slow until the locomotive has arrived behind Ground Position Signal WP1858. The PIC shall confirm to the Signaller when the train has come to a stand at Ground Position Signal WP1858. The PIC shall collect the Radio from the Driver prior to the train departing.

**Dated: 02/11/2024**

## MD501 - TAMWORTH (INCLUSIVE) TO BIRMINGHAM, PROOF HOUSE JUNCTION

### Lawley Street Freightliner Terminal

**General:** Lawley Street Freightliner Terminal (also known as Birmingham Freightliner Terminal) is located off the Up Washwood Heath Goods Loop adjacent to the Up Derby Line.

**Person in Charge (PIC):** When taking up duty the PIC must provide their name and mobile telephone number to the Washwood Heath Workstation Signaller at WMSC on Telephone 0121 576 2011 and report to the Signaller when their turn of duty is completed. The PIC may contact the Signaller for signalled shunt moves.

**Shunter:** The shunter will work under instruction of the PIC.

All points within the Terminal siding complex are hand operated. The Shunter of any movement within the Sidings must ensure hand points are set in the correct position for the movement.

#### Arrivals:

Trains arriving from the Water Orton direction are required to conduct a locomotive run round on the Up Washwood Heath Goods Loop arriving at Signal WP9907. Upon arrival, the Shunter shall hand a radio to the driver and complete a radio test. Once the locomotive run round has been completed, the shunter must reach a clear understanding with the driver regarding the propel movements into the terminal.

Trains arriving via Bordesley are not required to conduct a locomotive run round upon arrival on the Up Washwood Heath Goods Loop or Up Derby Slow.

Driver relief shall take place at Landor St Jn on the Up St Andrews Line at Signal LL4772. The relief driver will be possession of a radio and shall conduct a test with the PIC prior to departing this Signal. Alternatively, if driver relief does not take place at Landor St Jn, the driver of the arriving service shall collect a radio from the PIC near to the former Saltley PSB before continuing to draw the train into the Up Washwood Heath Goods Loop, or alternatively onto the Up Derby Slow arriving the rear of the train behind Signal WP9907 or WP9905.

Prior to propelling the train into the Terminal sidings, the Shunter shall contact the Signaller to request the route is set from either Signal WP9907 or WP9905 towards the Terminal. Both the Up Washwood Heath Goods Loop and Up Derby Slow are fitted with Set-Back 'Off' indicators. These indicators act as repeaters for Signals WP9907 and WP9905 respectively and allow drivers to set-back towards the Terminal under the authority of these Signals. Once the "OFF" indicator is illuminated the driver shall inform the Shunter that the train is ready to set back. The Shunter shall instruct the driver to commence the propel movement towards the Terminal.

Signals WP8902 and WP9907 can be set up for apposed locking to allow a train to be split into portions within the Terminal Sidings. Once the final shunt has been completed, the Shunter shall ensure the train is secured and shall contact the Signaller to advise the train has arrived within Terminal, inside clear of Signal WP8902 and advise that no further movements are required.

#### Departures:

Prior to marshalling a train ahead of departure, the Shunter shall contact the Signaller to request the route is set from Signal WP8902 towards the Up Washwood Heath Goods Loop. Signals WP8902 and WP9907 can be set up for apposed locking to allow a train to be shunted and formed together limiting interaction with the Signaller.

A train up to 640m in length shall be at a stand behind Signal WP8902. Once the Shunter has formed the train, they shall advise the Signaller that the train is inside clear of Signal WP8902 and no further movements are required. The Shunter shall complete a brake test and shall contact the Signaller to advise the train is ready to depart.

If a train is in excess of 640m in length the Shunter must inform the Signaller that the train is unable to set back behind Signal WP8902 prior to departure. Prior to departure the Driver shall contact the Signaller to inform that the train is ready to depart ahead of Signal WP8902. The driver shall advise the PIC they have been granted permission to depart and give one short blast of the horn to warn the train is departing. The driver shall depart the train via the Up Washwood Heath Goods Loop towards Signal WP8890, obeying all Signals as normal. As the train is starting ahead of Signal WP8902, the route can not be reset to depart the train via the Up Derby Slow.

**Opposing Locking** is omitted for Signals WP8902 & WP9907 only and is not available between Signals WP8902 and WP9905. The two signals can be cleared simultaneously to allow continuous shunting without contacting the Signaller. The PIC must contact the Signaller at Birmingham ROC to request this before conducting any movements and contact the Signaller once all moves are completed.

**Dated: 02/11/2024**

## MD545 - KINGSBURY JUNCTION TO WHITACRE JUNCTION

### Kingsbury Jn To Whitacre Jn

#### Between Kingsbury Junction and Water Orton

**Trains diverted via Whitacre West Junction.** Down and Up trains booked to travel direct, may be diverted via Whitacre West Junction without previous warning. Drivers so routed need not observe the requirements of Rule Book, Module S7, Section 1.2.

**Dated: 07/12/13**

## MD555 - NUNEATON NORTH JN TO WATER ORTON EAST JN

### Daw Mill Colliery

**General:** Daw Mill Colliery is located off two Reception/Departure 1 & 2 Lines adjacent to the Up Arley near Whitacre East Junction.

**Person in Charge (PIC):** When taking up duty the PIC must provide their name and mobile telephone number to the Water Orton Workstation Signaller at West Midlands SCC on telephone 0121 5762010. and report to the signaller when their turn of duty is completed.

All points within the Daw Mill Colliery Sidings are hand operated and the PIC of any movement within the Siding complex must ensure hand points are set in the correct position for the movement.

#### **Arrivals:**

Trains destined for Daw Mill Colliery will arrive on the Reception/Departure 1 & 2 Lines. Trains that arrive from the Nuneaton direction must be formed with a locomotive at both ends of the train and will arrive behind Ground Position Signal NW1274 at Daw Mill West Jn on the Down Arley Line before proceeding onto the Reception/Departure 1 & 2 Lines.

Upon arrival at the 'Stop & Telephone' board NW8268 or NW8270 respectively the PIC will hand a Radio to the train driver and must reach a clear understanding with the Driver and the Water Orton Workstation Signaller concerning the movements to access Daw Mill Colliery. The locomotive may be required to run round the train under the control of the PIC in liaison with the Signaller.

The PIC will liaise with the driver before authorising the driver to proceed or propel the train into the Colliery Sidings. The PIC shall complete the movement and shall contact the Water Orton Workstation Signaller to confirm the train is in clear of 'Stop & Telephone' board NW8277 and normalise the hand points. The PIC shall split the train into portions within the Colliery Sidings and ensure the train is secure

#### **Departures:**

Departing trains towards Water Orton: The PIC shall marshal the train within the Colliery Sidings and complete a brake test. The PIC will contact Water Orton Workstation Signaller to obtain permission for a movement to pass 'Stop & Telephone' board NW8277 onto the Reception/Departure Lines 1 or 2 and proceed the train towards exit signals NW8267 or NW8269 respectively ready for departure.

Departing trains towards Nuneaton: The PIC shall marshal the train within the Colliery Sidings and complete a brake test. The PIC will contact Water Orton Workstation Signaller for permission to propel the train past 'Stop & Telephone' board NW8277 onto the Reception/Departure Lines 1 or 2 and bring the train to a stand behind 'Stop & Telephone' board NW8268 or NW8270 respectively. The PIC shall contact Water Orton Workstation Signaller to obtain permission for the train to draw up to Signal NW8266 ready for departure.

**Dated: 11/07/20**

Once the train arrives at CN2 Stop Board and provided it is still safe to do so you may give the driver the token for the Up & Down Aylesbury Single Line and give them permission to pass CN2 Stop Board and obey the next signal.

Once the train has past CN2 Stop Board and is complete with tail lamp you must give Marylebone "entering section" and let the CPIC know that the train has arrived complete with taillamp and the Up & Down Aylesbury Siding is clear. You must make appropriate entries into the TRB and the trains location on the Signal Box Diagram must be updated.

Once the Marylebone Signaller contacts you to let you know the train has arrived in the Aylesbury Goods Loop and the token has been replaced you must make an appropriate entry in the TRB and update the Signal Box Diagram. You must inform the CPIC that the train has cleared the Up & Down Aylesbury Single Line and has arrived complete at Aylesbury Goods Loop.

### Possession of the Up Down Aylesbury Sidings

When a possession of the Up & Down Aylesbury Sidings is required this can be only be authorised by both the CPIC and the Signaller together in accordance with GSR 13.4

#### Full Possession:

Both the Claydon Signaller and the CPIC must agree that the full length of the sidings is to be taken under possession and protection must be placed at both ends of the siding.

It is still permissible to allow a token to be released for a train to travel up to CN1 Stop Board from Aylesbury, but the train must not pass CN1 Stop Board until the possession is given up.

#### Partial Possession:

In order to allow construction traffic to cross using a RRAP the CPIC may request a partial possession of the sidings. Once the Signaller and the CPIC have agreed to a partial possession the CPIC will confirm that protection has been placed at the crossing before the partial possession is granted. Unless required to do so in an emergency no train should enter the siding until the partial possession is handed back.

### Special Train running to Quainton Preserved Railway

When a special train is required to run to Quainton Station on the Up & Down Aylesbury Siding the details will be published in advance.

When there is an CPIC on duty and FCC is in operation the Claydon Signaller will agree with the CPIC the limit of the movement of the train. The Signaller will then collect the token and instruct the Driver to pass CN1 Stop Board and confirm the limits of the move. The train must be treated as in the instructions for a train from Aylesbury to Claydon and the token replaced and Out of Section given to Marylebone and Entering to the CPIC.

Once the token has been replaced and out of section given the Claydon Signaller must request a token from Marylebone Signaller for the Special Trains return journey in accordance with the instructions for trains from Claydon to Aylesbury.

If there is no CPIC on duty and FCC is not operating then the Claydon Signaller can, provided the line is clear and safe in accordance with the Rule Book, authorised the driver to pass CN1 Stop Board once they have agreed the limits of the movement. The train must then be treated as above.

**Dated: 27/01/2020**

## MD725 AYLESBURY TO CLAYDON L&NE JUNCTION

### BETWEEN AYLESBURY VALE PARKWAY AND QUANTON ROAD

#### **General:**

The HS2 materials by rail unloading point is located adjacent to the Up & Down Aylesbury Siding on the approach to Quainton Road (Buckinghamshire Railway Society).

The Up & Down Aylesbury Siding between Claydon Token Cabin and the Stop Block at Quainton Road is under the control of the HS2 PIC. No train movements will take place to or from the Up & Down Aylesbury Siding without the PIC's permission.

#### **Person in Charge (PIC):**

When taking up duty the PIC must provide their name and mobile telephone number to the Marylebone North Workstation Signaller. Also, the PIC must report to the Signaller when their turn of duty is completed. If a HS2 shunter(s) are on duty, they must report to the PIC and work only to the instructions of the PIC.

#### **Method of Working:**

The customary method of working between Aylesbury Vale Parkway Station and Quainton Road will be a one train operation, with the Driver retaining possession of the Token for the section of Up and Down Aylesbury Goods line between Aylesbury Vale Parkway and Claydon Token Cabin.

However, if an operational need arises for a second train/loco to serve the HS2 unloading point at Quainton Road, after the PIC has confirmed to the Marylebone North Signaller that there is sufficient room to accommodate the second train/loco, then the Token must be replaced in the machine at Claydon Token Cabin by the Driver of the train stabled at Quainton Road.

#### **Arrivals:**

The PIC/Shunter will meet the driver of the arriving train at Claydon Token Cabin and hand the driver a radio. The PIC will liaise with the driver and a clear understanding must be reached concerning the movements to access the HS2 unloading point. Prior to accepting the train to the HS2 unloading point the PIC must ensure that all staff working in the unloading point area are advised of the imminent arrival of the train and any line protection (Sleeper and PLB/Red Light/Red Flag) if applied has been removed. When these requirements are met the PIC will instruct the Driver to pass the Stop Board at Claydon Token Cabin and proceed to the unloading point at Quainton Road. If this is the only train to serve the unloading point in the required timings, then the Driver will retain the Token. This will be agreed via a conversation between the Driver and Marylebone North Signaller and a clear understanding must be reached. This conversation will take place at Aylesbury North Goods Loop.

However, if it is planned to arrive a second train/loco at the Quainton Road unloading point then the Token must be replaced in the Claydon Token Cabin machine after the train has drawn clear of the Claydon Token Cabin Stop Board complete with tail lamp. The replacement of the Token must be carried out by the Driver.

#### **Departures:**

No departures from Quainton Road towards Claydon Token Cabin will take place without the permission of the PIC. The PIC will remove any line protection (Sleeper and PLB/Red Light/Red Flag) if previously applied. When the train arrives at Claydon Token Cabin the Driver will contact the Marylebone North Signaller and confirm that he/she still has possession of the Token previously withdrawn at Aylesbury North Goods Loop. When this agreement is reached the Marylebone North Signaller will give permission for the driver to pass the Claydon Token Cabin Stop Board and proceed towards ME306 signal at Aylesbury Vale Parkway Station and obey that signal.

**ARCHIVED: 26/10/2024**

## MD736 – OXFORD NORTH JN (EXCL.) TO DENBIGH HALL SOUTH JN.

### Banbury Road Sidings

**General:** Banbury Road Sidings is located adjacent to the Up Bletchley to the East of Oxford Parkway Station accessed by Water Eaton Junction. The Sidings comprises an Aggregate Discharge Siding, Run round Siding, Head Shunt and 1 cripple siding accessible only via the West end of the site.

**Person in Charge (PIC):** When taking up duty the PIC must provide their name and mobile telephone number to the Marylebone North Workstation Signaller at Marylebone IECC on telephone 0207 922 9541 and report to the signaller when their turn of duty is completed. The PIC may contact the Signaller for signalled shunt moves.

Points within Banbury Road Sidings are either motorised or hand operated and the PIC of any movement within the Yard complex must ensure points are set in the correct position for the movement.

The PIC must check that there are no Chiltern Railway Units still berthed in the Sidings before commencing operations.

#### Arrivals:

Aggregate trains destined for Banbury Road Sidings will normally arrive from the Oxford direction on the Down Bletchley and shall arrive at Oxford Parkway Station Platform 2 to be met by the PIC. Upon arrival the PIC shall hand a Radio to the train driver and must reach a clear understanding with the driver and signaller concerning the movements to access the Banbury Road Sidings. The train shall draw forward from Signal OB1767 into the Banbury Road Aggregate Siding inside clear of Signal OB1768.

Aggregate trains destined for Banbury Road Sidings arriving from the Bicester direction and shall arrive on the Up Bletchley and shall arrive at Oxford Parkway Station Platform 1 to be met by the PIC. Upon arrival the PIC shall hand a Radio to the train driver and must reach a clear understanding with the driver and signaller concerning the movements to access Banbury Road Sidings. The Signaller shall clear Signal OB1766 to allow the train to draw forward. The PIC shall bring the rear of the train to a stand behind Signal OB9005 and confirm with the Signaller. The Signaller shall clear Signal OB9005 towards Banbury Road Sidings. The PIC shall ensure that Signal OB9005 is displaying a proceed shunt aspects before authorising the propel movement with the Driver into Banbury Road Aggregate Siding.

#### Departures:

Trains departing towards Oxford: The locomotive shall run round if required and the PIC shall complete a brake test prior to departure. The PIC shall contact the Signaller to advise the train is ready to depart. The Signaller shall clear Signal OB1768 upon scheduled departure.

Trains departing towards the Bicester: The locomotive shall run round if required and the PIC shall complete a brake test prior to departure.

The PIC shall reach a clear understanding with the Driver concerning the propel movement onto the Down Bletchley or Up Bletchley. The PIC shall contact the Signaller to advise the train is ready to depart and obtain permission to clear Signal OB1768 and Signal OB9006 (Down Bletchley) or Signal OB1768 and Signal OB1766 (Up Bletchley). Providing no conflicting movements have been authorised the Signaller shall clear the required Signals. The PIC shall ensure the Signal OB1768 is displaying a proceed shunt aspect before authorising the propel movement with the Driver into Oxford Parkway Station. The PIC shall walk the train back using Platform 1 as a position of safety. The Driver shall bring the train to a stand behind Signal OB1767 on the Down Bletchley or Signal OB9005 on the Up Bletchley. The PIC shall confirm to the Signaller when the train has come to a stand at Signal OB1767 or OB9005. The PIC shall collect from the Driver and the Driver shall contact the Signaller to request the Signal is cleared to depart.

**Opposing Locking** is omitted for Signal OB1768 & Signal OB5001. In both cases the two Signals can be cleared simultaneously to allow continuous shunting without contacting the Signaller. The PIC must contact the Signaller at Marylebone IECC to request this before conducting any movements and contact the Signaller once all moves are completed. The PIC must not operate 962 hand points with a train stood at OB5001.

#### Stabling of trains in Banbury Road Sidings

Between the hours of 22.00 and 06.00 Chiltern Railways are permitted to stable trains in Banbury Road Sidings.

**Dated: 29/05/2021**

**MD736 - OXFORD, NORTH, JN, (EXCL.) TO DENBIGH HALL SOUTH JN.****Gavray Jn (exclusive) To Flyover Junction Summit****Between Gavray Jn, Start of EWR worksite A & Route Boundary (18m 40ch) and Bridge over Vale lines ( Bletchley Flyover inclusive, 1m 12ch))**

The Up Bletchley and Down Bletchley lines between Gavray Jn, Start of EWR worksite A & Route Boundary (OXD 18m 40ch) and Bridge over Vale lines (Bletchley Flyover inclusive, DHF 1m 12ch) is non-operational and is out of use until further notice.

**25/08/2024 ARCHIVED****MD736 – OXFORD NORTH JN (EXCL) TO DENBIGH HALL SOUTH JN****Working of Trains To & From Bicester MoD Rail Depot**

**General:** The Bicester MoD Rail Depot is located adjacent to the Up Bletchley Line to the west of Bicester Depot West Junction.

Stop Board 5016 is under the direct control of the Bicester MoD Rail Supervisor (RS) and trains can only pass this stop board under instruction from the Bicester MoD RS.

All points within the Bicester MoD Sidings are operated and overseen by the Bicester RS.

**Rail Supervisor:** When a rail movement is inbound to Bicester MoD the RS (or nominated deputy) will contact the Marylebone North Workstation Signaller to provide their name, contact telephone number and confirm that the train can proceed into the rail facility at Bicester MoD.

**Arrivals:** The RS will advise the Signaller that they are on site, and that the access gate is open for the arrival of the train, and that they are able to accept the train into Bicester MoD Depot.

Trains will normally arrive on Bicester Depot Goods Loop.

When the Signaller has been advised that the RS is located at Stop Board 5016, the Signaller will clear OB1786 signal up to Stop Board 5016.

When agreed with the Signaller, the RS will authorise the driver to pass Stop Board 5016 and proceed into the Bicester MoD Depot.

**Departures:** The RS must advise the Signaller of a train ready to depart from Bicester MoD Depot.

The RS will inform the Signaller that the train is standing at OB5007 Stop Board.

When in a position to do so the Signaller will authorise the driver to pass OB5007 Stop Board and proceed to OB5009 signal.

## Table D5A – Route Clearance of Freight Vehicles

Last Updated: 07/09/2024

To be read in conjunction with General Notes.

The notations (used in these tables) are explained as follows for freight vehicles or loads conforming to the Group Standards:

Y Permitted to operate over the route without restriction.

R Permitted to operate over part or all of the route but restrictions apply. See “Notes” column for details.

S Permitted for, or prohibited to, specific traffic. See “Notes” column for details.

\* Route does not conform to Group Standard W6A Lower Gauge as defined in GE/RT8073. Certain W6A vehicles are prohibited from all or part of the route; these restrictions are detailed on the Summary of Compatibility for the vehicles concerned.

N Prohibited from operating over the route

### Conditions of Operation

- When operating within a possession the notations detailed within the table may not apply subject to a risk assessment and the application of appropriate control measures (in accordance with company and Group Standards).
- Freight traffic, other than containers/swap bodies, which exceed W6A gauge shall only operate in accordance with GORT3056-K
- Vehicles conveying containers/swap bodies are also subject to the procedure detailed in GO/RM3056, Section J Intermodal Traffic.
- Temporary authority for a specific wagon and container/swapbody combination may be granted by the Infrastructure Manager’s Gauging Engineer. This authority shall be detailed and issued on an RT3973/CON form.

### Note

GO/RM3056 Section J Intermodal Traffic contains details of the wagon type (by TOPS code) and container/swapbody (by height, width and/or size code) combinations that conform to the gauges shown as column headings in this table.

## Table D5B – Locomotive Gauge Clearance table

**Last Updated: 07/09/2024**

To be read in conjunction with General Notes.

- All locomotives conform to locomotive gauge, apart from Class 37s (when fitted with roof horns).
- Locomotive gauge restrictions apply to all locomotives unless clearance is provided in the Route Clearance D4 Tables.
- Locomotives that are not listed in the Route Clearance D4 Tables are permitted to operate over routes that conform to locomotive gauge, subject to the restrictions detailed in the table below and the conditions stated in the locomotive's Summary of Compatibility document. Locomotives that are not listed in the Route Clearance D4 Tables require a valid Summary of Compatibility prior to operation over Network Rail infrastructure.
- Locomotives are PROHIBITED from using crossovers within platforms (code word LACER) unless their overall length (over buffers) is 18.288m or less.
- Gauge clearance for steam locomotives is considered under a separate process.

The notations (used in these tables) are explained as follows for locomotive gauge conformant vehicles:

Y Route conforms to locomotive gauge without restriction.

R Route conforms (or partly conforms) to locomotive gauge but restrictions apply. See "Notes" column for details.

N Route does not conform to locomotive gauge

## Table D5D – Passenger Gauge/Lower Sector Vehicle Gauge Clearance table

**Last Updated: 07/09/2024**

To be read in conjunction with General Notes.

The notations (used in these tables) are explained as follows for passenger gauge and Lower Sector Vehicle Gauge conformant vehicles:

Y Route conforms to locomotive gauge without restriction.

R Route conforms (or partly conforms) to Passenger Gauge/Lower Sector Vehicle Gauge, but restrictions apply. See “Notes” column for details.

N Route does not conform to Passenger Gauge/Lower Sector Vehicle Gauge

Line of route	ELR	Line of Route / Sector Description	M	Ch	M	Ch	Passenger Gauge 1 (PG1)	Passenger Gauge 2 (PG2)	Lower Sector Vehicle Gauge (LSVG)	Notes
