## Commentary on the Wessex Timetable Planning Rules 2022

### Version 3.0

### Final Principal and Preliminary Proposal for Subsidiary Change Timetable 2022

This document is a covering note for the Timetable Planning Rules – Final Principal and Preliminary Proposal for Principal Change Timetable 2022 - and provides a specific commentary to the route described above.

In the Timetable Planning Rules document each change in content is indicated by the following convention:

New or Amended text is red
<del>Deleted text is green and struck through</del>

The change is also highlighted with a thick vertical line at the right hand side of the page.

The following is a summary of changes in content from Version 2.0 of the 2022 Timetable Planning Rules.

---

## 1 Introduction and General Notes

### 1.3 Definitions

- 1.3.4** Added DHL line code for Down St. Helier.  
 Added DW line code for Down Windsor.  
 Added UHL line code for Up St. Helier.  
 Added UMR line code for Up Main Relief.  
 Added UW line code for Up Windsor.  
 Added WR1 line code for Windsor Relief 1.  
 Added WR2 line code for Windsor Relief 2.

## 2 Route Description

### 2.1 Planning Geography

- SW100** London Waterloo amended route codes.  
 Waterloo West Crossings created new mandatory timing point and additional

route codes.

- SW105** Wimbledon West Junction added route codes UHL and DHL.  
 Berrylands Junction amended to timing point for all trains on Up Fast and Up Slow.  
 Shawford Junction amended description to “Shawford Down Junction”.  
 Shawford amended to conditional with note removed and S code added.  
 Shawford Up Junction created new timing point for all Up trains.  
 Eastleigh D.C.S. added entry.
- SW105C** Weymouth Signal DR194 removed S code.
- SW115** Salisbury added note about Holding Siding.
- SW115C** Yeovil Pen Mill added note that platform detail must be shown.
- SW120** Farnham Signal WK438 added entry.  
 Farnham Signal WK445 added entry.
- SW175** Yeovil Pen Mill added note that platform detail must be shown.
- SW200** Effingham Jn. C.H.S. added entry.  
 Effingham Junction Neck added entry.  
 Effingham Jn Signal GD1322 added entry.
- SW210** Virginia Water Sig. F491 removed timing point because this signal is being replaced.  
 Virginia Water Signal 2217 added timing point for new signal.  
 Ascot Signal F501 removed timing point because this signal is being replaced.  
 Ascot Signal BEF2237 added timing point for new signal.  
 Ascot Signal F506 removed timing point because this signal is being replaced.  
 Ascot Signal BEF2238 added timing point for new signal.  
 Bracknell amended to mandatory, removed S code, and added note that platform detail must be shown.
- SW255** Virginia Water Signal 2706 added timing point for new signal.  
 Chertsey amended to mandatory timing point and removed S code.
- SW260** Ascot Signal F504 removed timing point because this signal is being removed.  
 Bagshot amended to mandatory timing point and removed S code.  
 Camberley amended to mandatory timing point and removed S code.  
 Frimley amended to mandatory timing point and removed S code.
- SW300** Chilworth amended to mandatory timing point and removed S code.

## 4 Rolling Stock Restrictions

### 4.6 Driver Only Operation Limits

**General** Removed note for “ECS Slam” because this is not referenced in tables.

## 5 Running Times, Margins and Allowances

### 5.2 Headways

- General** Added note that headways in Wessex are applied on the depart to depart methodology.
- SW105** Moreton – Dorchester South amended headway rules to AB+1 and added note that it is TCB timed as AB.
- SW115** Salisbury Tunnel Junction – Salisbury amended up direction headway to AB+1

and added note that it is TCB timed as AB.

- SW125** Southcote Junction – Bramley reduced non-stopping headway to 3 minutes in both directions with a note that 4 minutes is required following freight.
- SW155** Totton Yard – Marchwood amended headway to AB.
- SW175** Dorchester West – Dorchester Junction added headway.
- SW260** Ascot – Frimley Junction amended headway rules in both directions to reflect signal sections.  
Frimley Junction – Ash Vale added note that it is TCB Single line.
- SW300** Shalford – Gomshall amended headway rules in both directions, including splits at Chilworth to reflect signal sections.

### 5.3 Junction Margins and Station Planning Rules

- Standard Values** Added minimum attachment time for Class 313.  
Added minimum attachment time for Class 377.  
Added minimum detachment time for Class 313.  
Added minimum detachment time for Class 377.  
Added minimum dwell time for Class 313.  
Added minimum dwell time for Class 377.  
Amended minimum dwell times for SWR services terminating and then running ECS in the same direction.  
Added note that dwell times for services terminating and then running ECS in the same direction may be reduced after discussion and agreement between the operator and Network Rail.  
Added standard platform reoccupation rule.  
Amended minimum turnaround time for Class 159 9/10 car.  
Removed 3-minute minimum turnaround for GWR 5-car Class 165/166.  
Added minimum turnaround times for Class 313.  
Amended minimum turnaround times for Class 377 7-9 car and 10-12 car.
- SW100** London Waterloo amended junction margins for departures followed by conflicting arrivals.  
London Waterloo added note that trains can arrive and depart on ½ minutes.  
London Waterloo amended permissive working rules.  
London Waterloo added rolling stock restrictions.  
London Waterloo amended station working requirements.  
London Waterloo added two planning restrictions.  
London Waterloo added eight simultaneous moves not permitted.  
London Waterloo added train length restrictions for services standing at signals outside Waterloo clear of West Crossings.  
Waterloo West Crossings added notes about adjustments to sectional running times.  
Waterloo West Crossings added junction margin.  
Waterloo West Crossings added simultaneous move not permitted.
- SW105** Wimbledon West Junction added three junction margins.  
Surbiton added restriction for Up trains.  
Basingstoke amended berthing rules for Down Yard because the proposed increase in capacity is no longer going ahead.  
Basingstoke amended three junction margins.  
Basingstoke added two simultaneous moves not permitted.  
Shawford Junction amended description to “Shawford Down Junction”.

	Shawford removed note about pathing time on Up Slow.
	Shawford Up Junction added adjustment allowance.
	Shawford Up Junction added note about pathing time on Up Fast or Up Slow.
	Eastleigh East Yard added planning restriction.
	Eastleigh removed minimum turnaround times for Class 22x and HST.
	Southampton Central removed 4-minute connectional allowance for Southern services.
	Brockenhurst amended note for permissive working into platform 4.
<b>SW110</b>	Guildford added North Box Sidings to Berthing Facilities.
	Guildford removed connectional allowance because it is a duplication of the standard value.
	Guildford amended two junction margins.
<b>SW115</b>	Templecombe removed dwell time for Up direction services.
<b>SW135</b>	Botley added/amended six junction margins.
	Botley added two simultaneous moves not permitted.
	Botley added planning note about freight run round movements.
<b>SW180</b>	Motspur Park amended dwell to include class 456.
	Leatherhead removed connectional allowances.
<b>SW185</b>	Chessington South removed platform reoccupation margin because this duplicates standard junction margin.
<b>SW200</b>	Hinchley Wood amended dwell to include class 456.
<b>SW210</b>	Virginia Water added/amended eight adjustment allowances.
	Virginia Water amended eight junction margins.
	Virginia Water added/amended three simultaneous moves not permitted.
	Virginia Water removed rules for Limit of Shunt.
	Ascot added three adjustment allowances.
	Ascot added/amended thirteen junction margins.
	Ascot added four simultaneous moves not permitted.
	Ascot amended permissive working rules for Platform 3.
	Bracknell added two junction margins.
	Bracknell added simultaneous move not permitted.
<b>SW245</b>	Strawberry Hill added proposed minimum reversal times for 10 car trains reversing in Platform 2 towards Strawberry Hill Depot.

---

These represent the revised Timetable Planning Rules (the “Draft Rules”) for the Subsidiary Change 2022 timetable in accordance with Part D of the Network Code, Condition D2.2.3.

As per Condition D2.2.4 of Part D of the Network Code, following distribution of the Draft Rules and by D-54, Timetable Participants may make representations to Network Rail in respect of any changes they propose or objections they may have to the Draft Rules provided to them in accordance with D2.2.3.

## 1. Introduction and General Notes

Network Rail provide the Timetable Planning Rules document to Train Operators and other interested parties to set out the rules which are applicable to Bids for scheduling of train paths on the Network Rail network. Separate sections of Timetable Planning Rules are prepared for each Route with a National Timetable Planning Rules document setting out procedures to be followed and other nationally applicable rules.

Network Rail will determine the contents of Timetable Planning Rules through consultation with Train Operators with the primary aim of achieving the optimal balance between access to the network for train operations and performance robustness of the resulting train plan. This consultation is in line with the Network Code Part D, and Train Operators have a right of appeal to Timetabling Sub-Committee against the contents of the Final Timetable Planning Rules.

Final Timetable Planning Rules are issued with timetable Bidding Information before the commencement of the development period for the Principal Change timetable to which the Rules apply and cover a 12-month period. Revised Timetable Planning Rules are issued with timetable Bidding Information before the commencement of the Subsidiary Change timetable development period and show changes applicable to the Subsidiary Change timetable period; which have been agreed since the issue of the annual Timetable Planning Rules.

Timetable Planning Rules may be changed only through this twice-yearly process or by the change procedure described in the National Timetable Planning Rules.

Train Operators' Bids for train paths must be compliant with Timetable Planning Rules. If a Train Operator wishes to submit a Bid for a train path which is not compliant with Timetable Planning Rules, it should consult the Network Rail Operational Planning team to establish whether an amendment to Timetable Planning Rules is likely to be agreed and, if appropriate, submit an amendment proposal which will be considered by Network Rail in accordance with the Change Procedure set out in the National Timetable Planning Rules. The Timetable Planning Rules amendment proposal should be submitted to Network Rail as early as possible and certainly no later than the time of submission of the Bid. If the proposed change is likely to involve the calculation of new sectional running times or a physical investigation then the Train Operator should liaise with the Operational Planning team to establish a realistic timescale for evaluation of the proposed change before submission of the Bid.

## 1.1 Index of Routes

Information arranged on a line of route basis in this document is presented in the following order:

SW100	London Waterloo to Clapham Junction
SW100B	Nine Elms Junction to Linford Street Junction
SW100C	West London Junction to Latchmere Junction (No 3)
SW100D	Clapham Junction to Longhedge Junction
SW100E	Clapham Junction to Latchmere Junction (No 2)
SW105	Clapham Junction to Weymouth
SW105A	Southampton to Southampton Western Docks
SW105B	Worgret Junction to Swanage Railway NR Boundary
SW105C	Weymouth Junction to Weymouth Signal DR194
SW110	Woking Junction to Portsmouth Harbour
SW115	Worting Junction to Pinhoe
SW115A	Andover to Ludgershall MOD
SW115B	Laverstock North Junction to Laverstock South Junction
SW115C	Yeovil Junction to Yeovil Pen Mill
SW120	Pirbright Junction to Alton
SW120A	Aldershot North Junction to Aldershot South Junction
SW125	Southcote Junction to Basingstoke
SW130	Eastleigh East Junction to Romsey
SW135	Eastleigh West Junction to Fareham
SW140	St Denys to Portcreek Junction
SW140A	Cosham Junction to Farlington Junction
SW145	Northam Junction to Southampton Eastern Docks
SW150	Redbridge Junction to Salisbury Tunnel Junction
SW155	Totton Yard to Fawley
SW160	Brookenhurst to Lymington Pier
SW165	Hamworthy Junction to Hamworthy Goods
SW170	Warminster to Wilton Junction
SW170A	Wilton Junction G.F. to Quidhampton Siding
SW175	Castle Cary to Dorchester Junction
SW180	Raynes Park to Leatherhead
SW185	Motspur Park Junction to Chessington South
SW190	New Malden to Shepperton
SW195	Surbiton to Hampton Court
SW200	Hampton Court Junction to Guildford (via Cobham)
SW205	Leatherhead to Effingham Junction
SW210	Clapham Junction to Reading (via Richmond)
SW210A	Hounslow Junction to Whitton Junction
SW210B	Reading Spur Junction to Reading New Junction
SW210C	Reading to Reading Southern Junction
SW225	Point Pleasant Junction to Wimbledon
SW230	Barnes to Feltham Junction (via Hounslow)
SW240	Old Kew Junction to Kew East Junction
SW240A	New Kew Junction to Kew East Junction
SW245	Twickenham Junction to Shacklegate Junction
SW245A	Strawberry Hill Junction to Fulwell Junction
SW250	Staines to Windsor And Eton Riverside
SW255	Virginia Water to Weybridge
SW255A	Addlestone Junction to Byfleet Junction
SW260	Ascot to Ash Vale Junction
SW265	Guildford to Wokingham
SW300	Gomshall to Shalford Junction

## 1.2 Sectional Appendices and Rule Book

### 1.2.1 Sectional Appendix

The Sectional Appendix to the Working Timetable and Books of Rules and Regulations shall be used.

The Sectional Appendix is the sole source of information regarding the following:

Electrification limits refer to relevant Table 'A'

Permissive Working refer to relevant Table 'A', then see below.

Route Clearance refer to 'tab' associated with relevant Table 'A'

To identify the type of Permissive Working that applies at a given location refer to the appropriate Sectional Appendix Table A for that location. If there is authority for Permissive Working, this will appear in the Signalling and Remarks. There are different authorities that depend upon the signalling and layout of the location. The following list identifies the types of Permissive Working that will appear in the Sectional Appendix.

Type	Description
PP	Permissive Working – Full use for class 1, 2, 3 ECS, 5, 9 and 0 trains
PP – A	Permissive Working – Attaching and Detaching use only for class 1, 2, 3 ECS, 5, 9 and 0 trains
PP – C	Permissive Working – Contingency use only for class 1, 2, 3 ECS, 5, 9 and 0 trains
PP – S	Permissive Working – Platform Sharing use only for class 1, 2, 3 ECS, 5, 9 and 0 trains
PF	Permissive Working – For class 3 to 8 and 0 trains

Source: Sectional Appendix – General Instructions – National - Explanation of Table A terms and symbols

### 1.2.2 Rule Book

The following Modules of the Rule Book GE/RT8000 affects all sections unless specified. The sections listed affect railway operations and train movements. The listed section does not apply to Train Planning directly, but its application will affect how trains operate, and it is for that reason the item appears here.

RULE BOOK MODULE	SECTION	NOTES
G1 General safety responsibilities and personal track safety for non-track workers	5.5 Using the phonetic alphabet;	Operational principles
OTM Working of on-track machines (OTM)	2.2 Before starting a journey	Timetable Planning Rules Section 4.6
	5.6 Carrying out a running brake test	Timetable Planning Rules Section 5.1.2
P1 Single line working	6.5 Warning anyone working on or near the line used for single line working	When planning Single Line Working
	9.3 Right-direction movements	
	9.4 Wrong-direction movements	
S1 Signals and indicators controlling train movements		Operational principles
S2 Observing and obeying fixed signals	3.1 Passenger train at a position-light, shunt-ahead or shunting signal	Operational principles
SP Speeds	2.4 Differential permissible speed indicators	Timetable Planning Rules Section 5.1.2
	2.5 Permissible speed indicators with letters	Timetable Planning Rules Section 5.1.2
	2.6 Enhanced permissible speed (EPS) indicators	Timetable Planning Rules Section 5.1.2

RULE BOOK MODULE	SECTION	NOTES
T11 Movement of engineering trains and on-track plant under T3 arrangements	3 Movements entering the possession	When planning trains entering possessions
	7 Instructing the driver or machine controller	When planning trains entering possessions
TW1 Preparation and movement of trains General	7.1 Authority and arrangements for movements (Hauling dead traction units)	Operational principles
TW2 Preparation and movement of multiple-unit passenger trains	6.5 Carrying out a running brake test	Timetable Planning Rules Section 5.1.2
TW3 Preparation and movement of locomotive hauled trains (including HSTs, push-pull, postal, parcels)	2.1 Locomotives running light or hauling trains (Maximum speed of);	Timetable Planning Rules Section 5.1.2
	2.2 Maximum permitted speed of locomotive-hauled trains	Timetable Planning Rules Section 5.1.2
	2.3 Electric-traction speed restrictions	Timetable Planning Rules Section 5.1.2
	3.16 Carrying out a running brake test	Timetable Planning Rules Section 5.1.2
	Section 14.1 Working trains with locomotives at both ends, when this type of working is permitted	Operational principles
Rule Book Handbook 5 Hand Signalling Duties	Section 5.2 Entrance signal	When planning Temporary Block Working (TBW)
	5.3 Exit signal	When planning Temporary Block Working (TBW)
	5.4 Where TBW is divided into two sections	When planning Temporary Block Working (TBW)

## 1.3 Definitions

The list below is not an exhaustive one but is intended to give readers an understanding of some of the terminology as used for the purposes of this document.

If any term in Timetable Planning Rules is unclear please contact the compiler on the telephone number shown on the cover.

### 1.3.1 Train Classification

Classification	Description
1	Express passenger train; or Nominated postal or parcels train; or Breakdown or overhead line equipment train going to clear the line or returning from there (1Z99); or Traction unit going to assist a failed train (1Z99) Snow plough going to clear the line (1Z99)
2	Ordinary passenger train; or Breakdown or overhead line equipment train not going to clear the line (2Z99) Officers' special train (2Z01)
3	Freight train which can run at more than 75 mph; or A parcels train; or Autumn railhead treatment train; or Empty coaching stock train if specially authorised
4	Freight train which can run up to 75 mph
5	Empty coaching stock train
6	Freight train which can run up to 60 mph
7	Freight train which can run up to 45 mph
8	Freight train which can run at, or is timed to run at, 35 mph or less
9	London Overground East London Line services and Thameslink services; or Other passenger train if specially authorised
0	Light locomotive or locomotives

Source: The Rule Book GE/RT8000/TW1 Preparation and Movement of Trains General Section 2 Classification and speed of trains

#### Wessex

Second Character	Wessex Timing Area
A	Waterloo and Alton
B	Waterloo and Southampton Docks, Lymington Pier or Poole (not local trains between Brockenhurst and Lymington Pier)
C	Waterloo and Reading via Hounslow (Class 1). Waterloo and Reading via Twickenham (Class 2). Victoria/ London Bridge and Bognor/Portsmouth/Bournemouth via Three Bridges and Horsham (Class 1).
D	Waterloo and Dorking via Epsom (Class 2 not available). Waterloo and Guildford via Epsom (Class 1 not available)
E	To Network Rail ex GE area Portsmouth and Southampton via Netley. Shepherd's Bush and Clapham Junction (Class 2)
F	Waterloo and Working/Guildford. Portsmouth and Cardiff
G	Waterloo and Guildford/Portsmouth via Cobham East London Line to Clapham Junction (Class 9)
H	Waterloo and Shepperton. Victoria/London Bridge and Littlehampton via Hove (Class 2 not available).

Second Character	Wessex Timing Area
	East London Line from Clapham Junction (Class 9)
I	Victoria and Sutton/Epsom/Dorking/Horsham via Mitcham Junction (semi-fast class 1, stopping class 2)
J	Brookenhurst and Lymington Pier local trains (Class 2 not available). Waterloo and Hampton Court Guildford and Farnham London Victoria/London Bridge and Southampton Central via Three Bridges and Horsham (class 1) Reading and Basingstoke (class 2) Salisbury to Reading (class 1)
K	Waterloo (Main) to Waterloo (Windsor) via Teddington/Richmond Portsmouth to Bournemouth and Weymouth London Bridge and Epsom/Guildford via West Croydon (semi-fast, class 1)
L	Waterloo and Basingstoke, Salisbury or Exeter To Network Rail ex GE area Clapham Junction to Stratford via Willesden Junction (Class 2)
M	To Network Rail North West/Midland areas except trains covered elsewhere Southampton and Swindon. Waterloo and Chessington.
N	Waterloo and Farnham/Guildford via Twickenham and Ascot. Brighton and Southampton Central via Swanwick (class 1) Littlehampton and Southampton Central (class 1)
O	To Network Rail Southern area except trains covered elsewhere Waterloo (Windsor) to Waterloo (Main) via Teddington (Class 1 not available) Reading to Gatwick Airport
P	Waterloo/Portsmouth via Woking.
Q	Test trains only
R	Salisbury and Totton via Chandlers Ford. Waterloo (Windsor) to Waterloo (Windsor) via Twickenham and Brentford.
S	To Network Rail Scotland Waterloo and Weybridge/Woking via Hounslow. Romsey to Salisbury Brighton and Portsmouth Harbour (class 1) Littlehampton and Portsmouth & Southsea (class 2) Rail Head Treatment Trains (class 3)
T	Waterloo and Portsmouth via Botley.
U	Waterloo and Windsor.
V	Network Rail Great Western area except trains covered elsewhere Waterloo (Windsor) to Waterloo (Windsor) via Brentford and Twickenham. Gatwick Airport and Reading.
W	Waterloo and Weymouth. Sandite trains (water jet only) London Bridge and Blackfriars via Mitcham Junction, Sutton and Wimbledon (class 2)
X	Out of gauge and exceptional loads
Y	Deicing and Sandite trains (see also W) Clapham Junction and Willesden (Class 2). Stratford to Clapham Junction via Willesden Junction (Class 2). ECS trains Waterloo to Clapham Yard/Wimbledon Park Depot. London Waterloo to Fareham/Southampton Central via Havant Brighton and Southampton via Eastleigh (1Y50 to 1Y99) Trains not covered elsewhere
Z	Special Traffic Trains.

### 1.3.2 Days of Operation

The following abbreviations are used to identify the day or days that a train operates.

Abbreviation	Description
M	Monday
T	Tuesday
W	Wednesday
Th	Thursday
F	Friday
S	Saturday
Su	Sunday
EWD	Every Week Day (Monday to Saturday)
Daily	Every day – will not accept this; there must be a separate entry for Sundays (Note – need to include reference to new ITPS processes).
<b>Suffixes</b>	
O	Adding this indicates that the train will run only on that day or those days shown
X	Adding this indicates that the train will not run on that day or those days shown
<b>General</b>	
BHX	Denotes that this train does not run on a bank holiday

### 1.3.3 Traction and Rolling Stock

Abbreviation	Description
15X	DMU classes 150/153/155/156/158/159
17X	DMU classes 170 and 175
22X	DMU classes 220/221/222
80X	Bi-mode classes 800/802
DMU	Any diesel multiple unit (excluding classes 220/221/222)
EMU	Any electric multiple unit
ECS	Empty Coaching Stock includes empty diesel and electric multiple units.
HST	Trains consisting of two Class 43 locomotives and Mk 3 passenger vehicles
LH	A passenger or parcels train hauled or propelled by one or more locomotives
LHCV	Locomotive hauled coaching vehicles
Power	Passenger stock equipped with power operated external doors

### 1.3.4 Line Codes

Abbreviation	Description
AL	Atlantic Lines
BKR	Back Road
BRV	Brighton Reversible
CL	Chatham Loop
CR	Carriage Road
DDG	Down Ripple Lane Chord
DFL	Down Fast Line
DNC	Down International CTRL
DFV	Down Fast Tonbridge Loop
<b>DHL</b>	<b>Down St. Helier</b>
DL	Down Line
DM	Down Main
DML	Down Main Line
DPL	Down Passenger Loop
DPV	Down Loop

Abbreviation	Description
DRV	Down Reversible
DSL	Down Slow Line
DSV	Down Slow Tonbridge Loop
DV	Down Loop
DW	Down Windsor
DWC	Down CTRL West Chord
FL	Fast Line
GL	Goods Line
LW	Ladywell Loop
MFL	Main Fast Line
ML	Main line
MSL	Main Slow Line
NKD	Down North Kent Line Connection CTRL
NKU	Up North Kent Line Connection CTRL
NLC	CTRL – NLL Connecting Line
QL	Quarry Line
PCO	St Pancras to ECML Connecting Line
PNL	CTRL Silo Curve
PRL	CTRL Relief Line
RCL	Reception Line
RCP	Reception
REV	Reversible
RG	Redbridge Goods
RL	Relief Line
RVF	Reversible Fast Line
RVL	Reversible Line
RVS	Reversible Slow Line
SD1	CTRL Turnback siding No 1 Church Path Pit
SD2	CTRL Turnback siding No 2 Church Path Pit
SL	Slow Line
SPR	Spur Line
TPM	Temple Mills Chord
UDG	Up Ripple Lane Chord
UEC	Up CTRL East Chord
UDL	Up & Down Fratton
UFL	Up Fast Line
UFV	Up Fast Tonbridge Loop
UHL	Up St. Helier
UL	Up Line
UM	Up Main
UMF	Up Main Fast
UML	Up Main Line
UMR	Up Main Relief
UMS	Up Main Slow
UPC	Up International CTRL
UPV	Up Passenger Loop
UQL	Up Quarry Line
URV	Up Reversible
USL	Up Slow Line
USV	Up Slow Tonbridge Loop
UV	Up Loop
UW	Up Windsor
UWC	Up CTRL West Chord
UWF	Up Windsor Fast
UWL	Up West London

---

Abbreviation	Description
V	Loop
WCR	Carriage Washing Machine
WFL	Windsor Fast Line
WL	Windsor Line
WR1	Windsor Relief Line 1
WR2	Windsor Relief Line 2
WSL	Windsor Slow Line

### 1.3.5 Activity and Other Codes

Abbreviation	Description
*	Suppression of traffic stop indicator
-D	Train stops to detach vehicles
-T	Train stops to attach and detach vehicles
-U	Train stops to attach vehicles
A	Train stops or shunts for other trains ahead or to pass only. Shows as * in WTT
AE	Trains stops to attach/detach assisting locomotive
BL	Train stops to attach or detach a banking locomotive
C	Train stops to change train crew
D	Train only stops to set down passengers. Shows as an 's' in NRT
E	Train stops for examination
G	NRT data to add
H	Notional Activity to prevent WTT column merge
HH	As H, where there is a third column involved
K	Passenger count point
KC	Ticket collection and examination point
KE	Ticket examination point
KF	Ticket examination point – 1 <sup>st</sup> Class only
KS	Selective ticket examination point
L	Train stops to change locomotives
N	Stop not advertised to the public
OP	Train stops for other operating reasons
OR	Train locomotive on rear of train
PR	Train propelling between points shown
R	Train stops when required. Shows as an 'x' in NRT
RETB	Radio Electronic Token Block
RM	Trains stops for a reversing movement or driver to change ends
RR	Train stops to allow the locomotive to runaround its train
S	Trains for railway personnel only
T	Trains stops to pick up or set down passengers
TB	Train begins (Origin)
TF	Train finishes (Destination)
TS	Detail consist for TOPS Direct requested by DB Schenker
TW	Train stops to pick up or set down a staff, tablet or token on Single Lines. See Section 5.2
U	Train only stops to pick up passengers. Shows as a 'u' in NRT
W	Train stops for watering of coaches
X	Train passes another train at crossing point on single line. See Section 5.2
x{	Suppress running line information
{	Force running line indication
{ }	Force path and line indications
}	Force path indication
#	Force stop with TW

Activity Codes - Notes
1. Any passenger train that stops at a location automatically generates a T Activity unless it is suppressed.
2. If an Activity is required that removes the 'passenger stop' Activity (T, D, U and R), then the 'passenger stop' Activity must always appear in the first Activity field (e.g. T -D would be correct, -D T would not). This is because the National Rail Timetable (NRT) extract program only considers the first Activity field. If it does not find a 'passenger stop' Activity in the first field the time will not be extracted to appear in the NRT.
3. Up to 6 Activities may be shown for each event.
4. No two Activities may be duplicated at the same event.
At any one event, the following groups are mutually exclusive
a) D, U, T, N, S, TW, OP.
b) -D, -U, -T.
c) TB, TF.
d) KC, KE.
6. N, R, G, D and U are only valid with Train Categories XC, XD, XI, XX, XZ, OO, OW, OL, BS, BR and blank (i.e. 'advertised' services).
7. K, KC, KE, KF, KS are only valid with Train Categories starting X or O.
8. If TF is present then none of K, KC, KE, KF, KS can be present.
9. Activity T indicates that a train stops to pick up and set down. This normally refers to passengers. Activity -T indicates that the train stops to attach and detach vehicles. At any location where a 'stop' time is shown, ITPS or a similar system will assume a default Activity is required unless otherwise specified. These default Activities are as follows: T for trains with a Train Category starting in X or O, OP for trains with a Train Category starting in Z or E, and -T for all other trains (but see below). The default Activity will be generated when the upload file is created.
10. If Activities U, D, N, R, OP, S, TW, -U or -D are specified then this overrides the defaults and only the specified Activities will be included in the upload file (it is not necessary to use the * suppression code if these codes are present).
11. If a traffic Activity is NOT required at a 'stop' location with Activities other than U, D, N, R, OP, S, TW, -U or -D (e.g. at 'C' or 'L' stops) then the * must be input to the ITPS or similar system train specification at that location to suppress -T or T. If the * is not added to indicate a non-traffic stop then T, -T or OP will be added to the upload file
12. If an Activity -T (only) is required on a train with a Category starting in X or O it is necessary to add a * to the spec (to suppress 'T') and positively show -T in the Activity column.

## 2 Route Description

### 2.1 Planning Geography

Network Rail maintains the planning geography and issues it to Train Operators using the BPlan system. BPlan data is to be regarded as the master geography and it is the responsibility of Train Operators and nominated Network Rail users to ensure that data in their train planning systems reflects the master geography.

It is essential that all locations, times and full details such as Platforms, running lines, activities, etc. comply fully with all of the following rules. Any Network Links used for buses only are to have running line defined as BUS. All data used by a specifier must be that supplied by Network Rail: use of estimated times added or amended locally will cause the trains concerned to fail validation.

In order to avoid the creation of unnecessary journey legs and associated point-to-point timings, all passing times must conform to these rules.

Locations in **bold type and underlined** are mandatory timing points i.e. apply to all trains on the specified line of route.

Locations in **bold** type are conditional timing points with a mandatory element. These are locations where all trains travelling on a specific line or in a specific direction are required to be timed at this location, which will be defined in the Notes column. For lines/directions for which the mandatory element does not apply they are to be treated as non-mandatory timing points and are only required to be shown in connection with a specific activity with one or more of the codes shown below in the Code column.

Locations in normal type are non-mandatory timing points and are required to be shown only for a specific activity with one or more of the codes shown below in the Code column.

Locations in *italic* type are not timing points but are shown for reference purposes.

Line references shown in italics e.g. *SW100* are only for reference purposes.

In the tables below, the following codes apply:

F	Only freight trains are timed here
P	Only passenger trains are timed here
S	Only stopping trains are timed here
X	Only trains crossing from one running line to another are timed here

## 2.2 Route Opening Hours

Subject to constraints imposed by the Engineering Access Statement, all routes are open continuously, except as shown below. The hours shown reflect the contractual opening hours. The actual opening hours may vary from those shown. For a complete listing of current signal box opening hours please refer to the "Compendium of Signal Box Opening Hours" which can be found on the Network Rail website - <https://www.networkrail.co.uk/industry-and-commercial/information-for-operators/>. If there is doubt about a signal box's opening hours check with the appropriate Network Rail Operations Manager.

When the routes shown are required for services diverted under the Engineering Access Statement, opening hours will be increased as necessary on a temporary basis.

Signal boxes equipped to be switched-out during a route's opening hours are shown within the routes concerned.

PLT denotes passage of last train.

## 3 Electrification

### 3.1 Electrification Limits

Limits of the 25 kV AC and 750V DC electrification systems are contained in Table A of the Sectional Appendix to the Working Timetables, issued by, Network Rail. Refer to Table A for the given location to identify the type of electrification that applies.

### 3.2 Electrification Supply Restrictions

Under normal conditions, the electrification power supplies will not place any restrictions on the use of approved electric traction. However, the Route Clearance sections of the Sectional Appendix to the Working Timetables, issued by, Network Rail do tabulate restrictions on the movement of electric trains. Refer to Table 'A' and select Route Clearance.

Under maintenance conditions, certain sections of the electrified network may be blocked to electric traction. These restrictions are contained within the Network Rail Engineering Access Statement for the appropriate year. Additional restrictions may also arise in connection with engineering possessions requested through the Engineering Access Statement amendment procedure.

## 4 Rolling Stock Restrictions

### 4.1 Locomotive Route Availability

See the applicable Route Clearance table for the given location in Sectional Appendix to the Working Timetables, issued by Network Rail. Refer to Table A, and select Route Clearance.

### 4.2 Passenger Stock Restrictions

See the applicable Route Clearance table for the given location in Sectional Appendix to the Working Timetables, issued by Network Rail. Refer to Table A, and select Route Clearance.

### 4.3 Freight Wagon Restrictions

See the applicable Route Clearance table for the given location in Sectional Appendix to the Working Timetables, issued by Network Rail. The Route Availability for a given location is in the 'Signalling and Remarks' column of Table A. Route Clearance Table D5 Route clearance of freight vehicles gives further guidance on freight wagon restrictions.

Trains conveying vehicles that have a heavy axle weight or other exceptional characteristics, or vehicles conveying containers or swap bodies require an RT3973 form.

*Note: The Rule Book GERT8000 Section TW4 of defines a container as an intermodal transport unit constructed to a standard (usually specified by the ISO) suitable for conveyance by road, rail or sea.*

*Note: The Sectional Appendix does not cover the CTRL HS1. The CTRL has its own Working Manual.*

### 4.4 Freight Train Load Limits

Trailing load limits for all traction types are contained in the Freight Loads Book published by Network Rail.

*Note: It is important to understand the weight limitations that apply to trains especially over sections of heavily graded routes. Coupling strength information is also contained in the Freight Loads Book. Coupling strength is important in determining the trailing loads that trains can convey.*

### 4.5 Freight Train Length Limits

Refer to the Freight Train Loads Book published by Network Rail for the length limits of freight trains.

*Note: The Sectional Appendix quotes loop lengths in metres and feet. These are the absolute lengths of the loop from the signal at the outlet to the fouling point at the entrance to the loop.*

## 4.6 Driver Only Operation Limits

When special trains are required to operate DOO (NP) over the above routes, it must be ascertained that competent staff are available to deal with these trains at the forwarding and receiving terminals, sidings, yards etc. or where locomotive changes take place en route. Furthermore, signal boxes are to be advised of these additional DOO (NP) services, with particular reference to ECS trains.

### Notes:

- Pass - Passenger trains
- ~~ECS Slam - Empty Coaching Stock with slam doors~~
- ECS Slide - Empty Coaching Stock with power operated sliding doors
- NA - Not authorised (except where # shown).
- P - Permitted.
- + - Subject to any relevant Route Availability restrictions.
- \* - Subject to provisions of working manual - White Pages (Sect H) paragraph. H10/1.
- @ - Unless the cab from which the train is being driven is Speed Sensing Fitted (SSF), slam door MU trains are limited to a maximum journey of 10 miles.
- # - Permitted for short notice movements, when all other DOO (NP) conditions are fulfilled and all doors are locked before departure. Authorisation MUST be obtained from Network Rail Operations Control, before this can be applied.

## 4.7 Engineers' Trains Restrictions

Some On Track Machines (OTMs) do not reliably activate track circuits. These OTMs must use one of the following special reporting numbers 6Z09, 7Z09 or 8Z09\*. Because these OTMs do not reliably activate track circuits it is not possible to apply the headways and junction margins as outlined in Timetable Planning Rules consistently and it is therefore not possible for Operational Planning to provide timings for these movements.

\* Source GE/RT 8000-OTM

## 5 Running Times, Margins and Allowances

Except where otherwise stated; the information in this section of the Timetable Planning Rules reflects the general rules used in developing the timetable. Exceptions to the general rules may be possible with the specific agreement by Network Rail in every case.

### 5.1 Sectional Running Times

The definition for Sectional Running Times (SRTs) is listed in Section 6.4 of the National TPRs.

#### 5.1.1 Source of Current SRTs

The definitive catalogue of SRTs is BPlan.

#### 5.1.2 Method of Calculation

SRTs are revised by Train Operators and Network Rail as part of the Revision of Timetable Planning Rules process outlined in Network Code Part D 2.2. Normally they will not change from one timetable to the next. Network Rail will, however, re-calculate SRTs for particular train/route combinations in the following circumstances:

- i) Where a Train Operator anticipates using a train/route combination for which no suitable SRTs exist;
- ii) Where Network Rail anticipates a change to route data, e.g. line speed changes;
- iii) Where there is evidence that the SRTs in current use do not adequately represent real train performance;
- iv) Where it is cost-effective to re-calculate all SRTs on a route at the same time as a re-calculation for a particular train type.

Network Rail will reflect the methodology and assumptions described in Section 6 of the National TPRs when calculating TPR proposals, unless and to the extent documented otherwise in respect of any given proposal. Timetable participants are encouraged to submit change proposals for review and consultation in line with the national methodology, or in line with such alternative methodology and assumptions as favoured by the proposer. NR will not seek to reject any proposal on the exclusive basis of the methodology employed, provided that the methodology and assumptions are clearly stated and demonstrably adhered to in respect of the proposal received.

SRT change proposals may be calculated in a number of ways including, but not limited to:

- a) Through actual timing of trains
- b) Use of On Train Monitoring Recorder (OTMR) systems
- c) Use of computer system actual values
- d) Use of computer simulation tools
- e) By any other agreed methodology

It is permissible to include percentage uplift in SRTs instead of applying engineering recovery allowances to be agreed by all affected parties.

In the event that the application of different methodologies produces conflicting proposals, a joint observation exercise should be undertaken to ascertain what happens in reality.

When the final SRTs obtained by the above methodology are different from those currently in use, Network Rail presents them to Train Operators for comment either in Section 5.1.3 below or through the Timetable Planning Rules Change Procedure.

### 5.1.3 New and Revised Sectional Running Times

New and revised SRTs are revised by Train Operators and Network Rail on an individual basis. These should be supplied by applying the methodology described in Section 6 of the National TPRs unless another methodology is deemed appropriate, provided that the methodology and assumptions are clearly stated and demonstrably adhered to in respect of the proposal received.

### 5.1.4 Timing of Trains Consisting of Passenger Vehicles on Goods Lines

The sectional running timings quoted for trains consisting of passenger vehicles on Goods Lines reflect the speeds shown in the relevant Table 'A' of the appropriate Sectional Appendix. They do not constitute an authority to time trains conveying passengers on a Goods Lines. Nor do they reflect the permitted speeds at which a train conveying passengers can proceed. Network Rail will offer the sectional running times for trains conveying passengers on a Goods Line on a train-by-train basis. For those times please apply to the Operational Planning Department.

Operations Publications publish the authority to allow the planned operation of trains conveying passengers on Goods Lines. Before Operations Publications can grant authority they require confirmation that the track is fit for purpose and that there is a safe method of operation. Therefore, the Operational Planning Department must apply to the relevant Track Engineer and Operations Manager for confirmation of these requirements in writing. The Operational Planning Department must pass these responses to Operations Publications. The Operational Planning Department is responsible for advising Operations Publications of the requirement to operate a passenger train on a Goods Line at least 8 weeks before the day of operation.

## 5.2 Headways

### 5.2.1 Headway Values

All times are in minutes. All routes are shown.

Where track circuit block (TCB) signalling applies, the standard headways for each route are shown, together with any exceptions.

AB indicates locations where absolute block signalling applies: here the headway is to be calculated from the transit time of the first of each pair of trains running between the consecutive block posts being considered. To this transit time shall be added 2 minutes to allow for the signaller's actions. Exceptions are shown as AB and appear together with the actual headway value to be used, which includes the allowance for signallers' actions. Where there is an intermediate block signal, the absolute block section concerned shall be between this signal and the next block post in advance.

Single lines and other forms of signalling are shown, together with any values applicable, where they occur.

"OTNS" or "OT" indicates One Train Working with No Train Staff; "OTS" or "OT(S)" indicates One Train Working with Train Staff. "NST" indicates No Signaller token. In these cases only one train is allowed in the section at one time; a second train cannot be allowed to enter the section until the first train has left the section.

"ETB" indicates Electric Token Block and "TB" indicates Tokenless Block for single lines.

"RB" indicates Radio Signalling where "long section tokens" can be issued between certain block posts during times of low traffic volume.

Where headways are shown as being "non-stopping" or "stopping" these descriptions refer to the service that the path is following. The "stopping" headway should be applied to a service following a preceding service which stops at either a station or any other location for operational reasons. The "non-stopping" headway should be applied to a service following a preceding service which does not stop at that location. Immediately the preceding service stops at any location for any reason, the following service headway should be amended to the "stopping" value. If in doubt, apply the use of the "stopping" headway.

Light Engine movements to be treated as passenger trains when applying margins/allowances where there is a freight/passenger difference.

**Headways in Wessex are applied on the depart to depart methodology.**

Shalford – Chilworth		AB+1	Based on time preceding train arrives / passes Chilworth. An Up train cannot arrive at Chilworth until preceding train departs / passes Gomshall. TCB timed as AB.
Chilworth – Gomshall		AB+1½	Based on time preceding train departs / passes Gomshall. TCB timed as AB

## 5.2.2 General Capacity Constraints

The standard headway as shown in 5.2.1 is defined as the minimum planned interval between trains at their closest point in any route section as shown. Assumptions as to the capacity of any particular route section should not be made solely by the information contained within this sub-section.

Network Rail will expect operators to allow greater margins between trains, where possible, in order that the finished timetable is robust.

If trains are deliberately timed to close up on a preceding train, additional allowances must be inserted.

In the interests of a more robust timetable and performance, it is intended that bids from operators for additional services over certain lines and junctions which have minimal spare capacity will be limited for both permanent and amended train working, with the following exceptions:

- a) Where usage already exceeds the capacity limit, operators will be permitted to retain existing paths but will be encouraged to move trains away from the critical period or route section where there are acceptable customer/cost considerations. If an operator relinquishes a path in the critical period, other operators would not be able to re-occupy the path.
- b) If an operator wishes to bid for an additional train/s in the critical period or over the critical route section, that request will be tabled for discussion. Normally, additional bids that breach the capacity limit will not be accepted but in exceptional circumstances may be accepted subject to all parties affected acknowledging and accepting the performance risks.

In 2007 Network Rail declared the route between Reading and Gatwick Airport as congested, solely on account of the constraints on Platform working at

- ◇ Reading
- ◇ Redhill
- ◇ Gatwick Airport

For further details please refer to 'The Network Statement' as available on the following internet website

- ◇ Networkrail.co.uk

Where single line working is to operate or trains are to be routed to run on a line other than that normally planned for them, constraints on capacity will apply – see Engineering Access Statement.

The following special capacity and timing restrictions apply in addition to the constraints stated elsewhere in this document:

<b>SW100 LONDON WATERLOO TO CLAPHAM JUNCTION</b>			
<b>LINE/LOCATION</b>	<b>SECTION</b>	<b>CRITICAL TIMES SX</b>	<b>REMARKS</b>
Clapham Junction	Latchmere/Ludgate Lines	07.00 – 09.00 16.30 – 18.30	From Ludgate Line /Latchmere Reversible to Down Windsor Lines (Plats 5/6)/Clapham Yard
London Waterloo and Woking	It is intended to restrict usage to 90% of capacity	06.00 – 21.00 EWD	In peak periods no more than 25 non stop trains per hour will be permitted on the fast Lines

**SW100C WEST LONDON JUNCTION TO LATCHMERE JUNCTION (NO 3)**

LINE/LOCATION	SECTION	CRITICAL TIMES SX	REMARKS
North Pole Junction and Latchmere Junction (No 3)	No more than 13 paths per hour in each direction	All day	Stopping services are likely to absorb more than one path

**SW100D CLAPHAM JUNCTION TO LONGHEDGE JUNCTION**

LINE/LOCATION	SECTION	CRITICAL TIMES SX	REMARKS
Clapham Junction	Ludgate Junction	07.00 – 09.00 16.30 – 18.30	From Ludgate Line /Latchmere Reversible to Down Windsor Lines (Plats 5/6)/Clapham Yard

**SW100E CLAPHAM JUNCTION TO LATCHMERE JUNCTION (NO 2)**

LINE/LOCATION	SECTION	CRITICAL TIMES SX	REMARKS
Clapham Junction	Latchmere Junction (No 2)	07.00 – 09.00 16.30 – 18.30	From Ludgate Line /Latchmere Reversible to Down Windsor Lines (Plats 5/6)/Clapham Yard
North Pole Junction and Latchmere Junction (No 3)	No more than 13 paths per hour in each direction	All day	Stopping services are likely to absorb more than one path

**SW105 CLAPHAM JUNCTION TO WEYMOUTH**

LINE/LOCATION	SECTION	CRITICAL TIMES SX	REMARKS
Basingstoke	Southcote Junction	06.00 – 09.00 16.30 – 19.30	Southbound from Reading direction.
Eastleigh	Platforms 2 and 3	06.00 – 08.00 17.15 – 19.45	Additional moves to/from the Depot and Yard will be subject to negotiation between the bidding operator and Network Rail.
London Waterloo and Woking	It is intended to restrict usage to 90% of capacity	06.00 – 21.00 EWD	In peak periods no more than 25 non stop trains per hour will be permitted on the fast Lines

**SW125 SOUTHCOTE JUNCTION TO BASINGSTOKE**

LINE/LOCATION	SECTION	CRITICAL TIMES SX	REMARKS
Basingstoke	Southcote Junction	06.00 – 09.00 16.30 – 19.30	Southbound from Reading direction.

**SW130 EASTLEIGH EAST JUNCTION TO ROMSEY**

LINE/LOCATION	SECTION	CRITICAL TIMES SX	REMARKS
Eastleigh	Platforms 2 and 3	06.00 – 08.00 17.15 – 19.45	Additional moves to/from the Depot and Yard will be subject to negotiation between the bidding operator and Network Rail.

**SW135 EASTLEIGH WEST JUNCTION TO FAREHAM**

LINE/LOCATION	SECTION	CRITICAL TIMES SX	REMARKS
Eastleigh	Platforms 2 and 3	06.00 – 08.00 17.15 – 19.45	Additional moves to/from the Depot and Yard will be subject to negotiation between the bidding operator and Network Rail.

**NOTE** - Two line railway timetables on Sundays are detailed in the Engineering Access Statement document for the relevant parts of the region

## 5.3 Junction Margins and Station Planning Rules

All times shown are in minutes. Where adjustments to sectional running times are shown, the value must be added to the normal SRTs shown in B Plan. Negative adjustments are specially identified.

Minimum station allowances are the minimum practical for the particular type of stock. These are shown with exceptions being listed by line of route where applicable.

### STANDARD VALUES – MINIMUM

#### Attachment of Locomotives/Units

Class 150 DMU	5
Class 153 DMU	5
Class 158 DMU	2
Class 158 DMU (GWR Services)	5

Class 455/6 EMU	2
Class 458 EMU	5
Class 701	4
Class 707	4
Class 769	7 Passenger 5 ECS

<b>Connectional Allowance</b>	5 minutes
-------------------------------	-----------

#### Detachment of Locomotives/Units:

Class 150 DMU	4
Class 153 DMU	4
Class 158 DMU	2
Class 158 DMU (GWR Services)	4
Class 159 DMU	2
Class 165/166 DMU	4
Class 22x DEMU	7
Class 313 EMU	3 (2 for ECS)
Class 377 EMU	4
Class 442 EMU	2
Class 444 EMU	4
Class 450 EMU	4
Class 455/6 EMU	2
Class 458 EMU	5
Class 701	4
Class 707	4
Class 769	5

#### Dwell Time\*

\* Dwell times may be varied during the production of timings for trains in conjunction with engineering work or other special traffic arrangements at the discretion of the Amended Timetable Manager.

Class 150 DMU	½					
Class 153 DMU	½					
Class 158 DMU	½					
Class 159 DMU	½					
Class 165/166 DMU	½					
Class 22x DEMU	1½					
Class 313 EMU	½					
Class 377 EMU	½					
Class 442 EMU	1					
Class 444 EMU	½ \$					
Class 450 EMU	½ \$					
Class 455/6 EMU	½					
Class 458 EMU	1					
Class 701	½					
Class 769	1					
Class 80X	1½					
Loco Hauled	1					
Trains terminating and then running ECS in the same direction (except SWR services)	1*					
Trains terminating and then running ECS in the same direction (SWR services)	2 (1-6 cars)* 4 (7-12 cars)*					
\$ An actual minimum dwell time of 45 seconds is required at all station stops. As timetable systems can only use multiples of 30 seconds, every second station stop must have a dwell time of at least 1 minute input into the system.						
* By exception, allowances for trains terminating and then running ECS in the same direction may be reduced after discussion and agreement between the operator and Network Rail.						
Locomotive Change	10					
Locomotive Runaround	10					
Junction Margins						
Between all conflicting movements	3					
Resetting of route for a departing service following the arrival of a conflicting inwards service	1					
Platform Reoccupation						
Platform reoccupation in the same direction is equal to the stopping headway minus 30 seconds except where stated otherwise.						
Minimum Turnaround – Passenger Stock						
Stock	1 or 2 Car	3 or 4 Car	5/6 Car	7/8 Car	9/10 Car	11/12 Car
Class 150 DMU	3 Mins	3 Mins				
Class 153 DMU	3 Mins	4 Mins				
Class 158 DMU	3 Mins	4 Mins	5 Mins			
Class 159 DMU		4 Mins	5 Mins		6 8 Mins	
Class 165/166 DMU (GWR)	3 Mins	3 Mins	4 Mins*	5 Mins		
Class 22x DEMU		10 Mins	10 Mins	10 Mins	10 Mins	
Class 313		4 Mins	5 Mins			
Class 377		4 Mins	4 Mins	5 Mins	6 Mins^	6 Mins
Class 378			6 Mins#			
Class 442 EMU (SWR)			6 Mins		9 Mins	

Class 444 EMU			6 Mins		7 Mins	
Class 450 EMU		5 Mins		6 Mins		7 Mins
Class 455/6 EMU (South Western Railway)		6 Mins	6 Mins	7 Mins	8 Mins	8 Mins
Class 455 EMU (Southern Trains)		5 Mins		6 Mins		
Class 458 EMU			6 Mins		7 Mins	
HST					7 Mins	
Class 701			6 Mins		7 Mins	
Class 707			6 Mins		7 Mins	
Class 710		5 Mins	6 Mins#			
Class 769		4 Mins		5 Mins		

\* ~~3 minutes turnaround for GWR 5 cars.~~

# 5 minutes turnaround when forming an ECS.

^ 5 minutes turnaround for 9 cars.

#### **CrossCountry HST / 22x Train Preparation Allowances – minimum platform standing allowance between ECS arrival from depot and passenger train departure**

1 x 22X	15
2 x 22X / HST	20

By exception, allowances for 'Train Preparation' (above) and 'Safety Check Unit' (below) may be reduced after discussion and agreement between CrossCountry and Network Rail

#### **CrossCountry 22x Safety Check Unit (SCU) Allowances – minimum platform standing allowance between passenger train arrival and ECS departure to depot**

1 x 22x departing in same direction as arrival	8
1 x 22x departing in reverse direction to arrival	10
2 x 22x departing in same direction as arrival	15
2 x 22x departing in reverse direction to arrival	20

#### **Reversal**

Class 22x	5
2 x Class 22x	6

#### **Minimum Allowance for Freight Movements**

Between stopping and then propelling	2
Crew change	2*
Light engine reverse	2
Runaround in stations	20*
Runaround in yards or depots	20

\* For all New or Changed paths, with Existing paths being actively looked at and changed wherever possible.

#### **Generic Rolling Stock Classes**

Train Class	ITPS Timing Load
Class 171 (Southern services)	Class 170
Class 375 and 377	Class 375

#### **Adjustments to Sectional Running Times**

Movements	Reason	Value
Approaching All Bays, Loops, Crossovers and Occupied Platforms	Approach Control	{½}
Terminating trains arriving on half minutes in final timing link (with the exception of ARL services)	Station working	{½}

For route divergence allowance see Station Entries.

All allowances mentioned in the exceptions should be included in train times when approaching the listed timing

point unless otherwise noted.

#### **Permissive Working**

Where attaching/detaching and Platform sharing is permitted, only class 1, 2, 3 ECS, 5 and 0 trains are allowed to undertake permissive working. See Rule Book

#### **Station Working Requirements**

All trains that are planned to stop additionally en route are to be advertised later at the destination on the basis of 3 minutes allowed for each stop.

#### **Engineering Works**

DOWN trains, plus UP trains not running to Waterloo are to be advertised **3** minutes later arrival if they have:-

- been subjected to Single Line Working
- operated as connecting services out of bus services
- been diverted via alternative routes
- operated through normally four line sections that have been reduced to two lines
- stopped additionally en route (which must be properly allowed for in the retiming)

Additionally, an extra 3 minutes Performance allowance is to be added to those schedules, at convenient locations, during the preparation of “standard hours” by the Engineering Strategy Manager, South Western Railway.

#### **Signal box allowance**

A margin of 5 minutes between trains (should be allowed) when entering a block section where a box is either opening or closing

#### **Light Engine Movements**

Light Engine movements to be treated as passenger trains when applying margins/allowances where there is a freight/passenger difference.

**SW100 LONDON WATERLOO TO CLAPHAM JUNCTION****Permissive Working**

Permissive working should be avoided wherever possible but a service may be Platformed on top of another provided at least six minutes exists between departures. This is to enable the second train to be advertised after the first has departed, and to allow sufficient time for boarding.

Attaching/Detaching and Platform Sharing is authorised as shown below:-

Platform 1	Attaching/Detaching and Platform Sharing
Platform 2	Attaching/Detaching and Platform Sharing
Platform 3	Attaching/Detaching and Platform Sharing
Platform 4	Attaching/Detaching and Platform Sharing
Platform 5	Attaching/Detaching and Platform Sharing

**Restrictions**

<b>(1)</b> = Class 444/450 combinations totaling 9 cars can be accommodated.	<b>(2)</b> = No detaching or platform sharing totaling 12 car 450 stock or 10 car 442 & 444 stock owing to signal sighting.	<b>(3)</b> = Unable to attach 2 or 4 car to an 8 car train due to track circuit being occupied.	<b>(4)</b> = Attaching of 158/159 stock is not permitted.
<b>(5)</b> = Only able to split 12 car once at a time. Three 4 car units not allowed.	<b>(6)</b> = No Attaching/Detaching totaling 10 car 158/159 stock. Must arrive/depart complete owing to signal	<b>(7)</b> = No Attaching/Detaching or platform sharing. Must arrive/depart complete.	<b>(8)</b> = Class 442, 444, 158, 159 may use the Up and Down Main Slow between Waterloo and West Crossings but stop all

**SW100 LONDON WATERLOO TO CLAPHAM JUNCTION**

	sighting.		other movements entering or departing platforms 1-9 due to restricted passing clearance over Wesminster Bridge Road.
(9)= 9 car 159 stock only able to split once at a time. Three 3 car units not allowed.	(10)= Maximum formation in service with class 456 is 10 cars – Class 455 formation is 8 cars.		

**Station Working Requirements**

The following principles should be observed when compiling Platform arrangements at Waterloo. **These principles are for guidance and are not factors that will determine the validity of an Operator access proposal.**

Services will be Platformed based on:

- Arrival running line and departure running line.
- Formation of train and relevant Platform restrictions.
- Consequential re-Platformings will be kept to a minimum.
- Services arriving Main Slow Line will normally use Platforms 1—4 but may also use Platforms 5/6
- Services arriving Main Fast Line will normally use Platforms 7—15 but may also use Platforms 4/5/6. If the Up Main Relief is used, Platforms 7—17 are available.
- Windsor Line arrivals will normally use Platforms 14—20
- If Carlisle Lane Junction or West Crossings are used, other Platforms are accessible but for a limited number of movements only.
- When a train departs from Platforms 10—15 to the Down Main Fast Line, any Up Main Fast arrival within three minutes must run Relief Line. It should be remembered that Platforms 4/5/6, 7/8/9 and 12/13 share common track.\*
- \* Platform 4 only share common track when arrivals or departures are from or to the Fast lines or if there is a departure off platform 3
- If an operator wishes to utilise 12 cars in Platform 7, this should be done with the agreement of Network Rail under amended timetable purposes outside the peak hours.

Incoming services arriving less than three minutes after a departure should be allocated a higher numbered, non-conflicting Platform (the Platform occupation graph should show a 'fan effect' within groups of Platforms, reflecting this). Where this is not possible, incoming services may be retimed by up to three minutes in order to adhere to crossing margins.

It may be possible on a limited number of occasions for a departing Main Fast service to run down the Up Main Relief Line, and cross behind the arrival, or a departing Main Slow service to run Down Main Fast to West Crossings if the arrival is on the Up Main Slow. ~~Under these circumstances, attention is drawn to a four minute margin before the next arrival.~~ Under these circumstances, attention is drawn to the relevant junction margin value.

For amended timetable purposes, to avoid a number of re-timings, it is permissible to have a limited number of 'same arrival and departing time' workings in conflicting Platforms. Each occasion must be individually agreed with Network Rail's Amended Timetable Manager. This is not to be taken as a general exception to the normal junction margins as stated above.

~~If a down train from Waterloo consisting of stock equipped with power jumper cables is formed of portions which have been attached at Waterloo and are again to be detached en route, it must depart from the same side Platform face at Waterloo as the Platform face where the detachment will subsequently be made.~~

Trains formed of Class 455 & 456 Units may be programmed to detach: -

- In any Platform (subject to route restrictions) provided that the jumpers are connected on the Platform

**SW100 LONDON WATERLOO TO CLAPHAM JUNCTION**

side.

- In Platforms 1, 2, 3, 4, 5, 16 and 17 (which are equipped with off-side ramps) irrespective of which side the jumpers are connected

Trains formed of Class 442 Units may ~~be programmed to detach~~ not be planned to attach/detach at Waterloo as a result of an SWR operational policy.

For information, facilities to detach the units should the policy change are as follows:

- In any Platform (subject to route restrictions) provided the jumpers are connected on the Platform side.
- In Platforms ~~6, 7, 8~~, 9, 10, 11, 12, 13, 14, 15, and 18 and ~~19~~ (which are equipped with off-side ramps) irrespective of which side the jumpers are connected

Down passenger services should not normally be retimed from Waterloo to accommodate an additional or retimed incoming service. ~~It is acceptable to retime down ECS moves to give priority to an incoming service, although the destination of the ECS (particularly if long distance) should be borne in mind. Down passenger services may, however, be retimed where an engineers' possession dictates that a service booked to the Down Main Slow Line is allocated a Platform that only has exit to the Down Main Fast Line, thus conflicting with a Main Line departure (e.g. 06/36 Down Main Slow departures retimed to 07/37 so as not to clash with 05/35 Down Main Fast departures).~~

Ten minutes must be allowed before a movement into a Platform that has been under engineers' possession.

Stock must be out-berthed from Platforms under engineers' possession unless special dispensation is given.

~~In Platforms 13, 14, 15 and 16 the severity of track curvature makes the coupling of Class 158/159s/170s difficult.~~

**For further information regarding Platform availability please see the Sectional Appendix; Section 3B**

~~\* 3 minutes for peak services between 07.30 and 09.30 SX and between 16.00 and 19.00 SX~~

**Planning Restrictions**

Pathing time must not be used in Up trains approaching Waterloo Platforms 20-24 (final signal is at West Crossings). N.B. It should be noted that it is not possible to stand a train at W906 signal.

When the Down Windsor is under possession in the vicinity of International Junction it is not possible for an Up train to cross from the Windsor Reversible to the Up Windsor at West Crossings, or for a Down train to cross from the Up Windsor to the Windsor Reversible at West Crossings.

**Simultaneous Moves Not Permitted**

Up train on Windsor Reversible weaving to Up Windsor at West Crossings	Down train on Down Windsor passing West Crossings
Up train on Windsor Reversible passing West crossings towards Platforms 14-19	Down train depart Waterloo Platforms 20-24 via Windsor Relief 1
Up train using ladder at West Crossings to cross to the Windsor Reversible	Down train depart Waterloo via Up Windsor
Down train using ladder at West Crossings to cross from the Windsor Reversible	Down train depart Waterloo via Up Windsor
Down train weaving from Up Main Relief to Down Windsor Fast at West Crossings	Up or Down train running straight along Up Windsor at West Crossings
Down train departing Waterloo via Down Windsor towards Down Windsor Slow (N.B. There is no restriction if train is routed towards Down Windsor Fast)	Down train departing Waterloo via Up Main Relief
Down train routed past West Crossings that has	Down train depart Waterloo via Up Windsor (towards

**SW100 LONDON WATERLOO TO CLAPHAM JUNCTION**

approached via Windsor Reversible (i.e has a proceed aspect at W49)	W57)
Down train routed past West Crossings that has approached via Up Windsor (i.e has a proceed aspect at W57)	Down train depart Waterloo via Down Windsor (towards W55)
<b>Train Length Restrictions</b>	
Maximum standage at final signals approaching Waterloo whilst still allowing trains to be routed over West Crossings in rear (N.B. longer trains than stated below may be stood but will foul West Crossings)	
<b>Line</b>	<b>Maximum standage to be clear of West Crossings</b>
UMS (Signal W2)	234 metres (10-car)
UMF (Signal W4)	176 metres (8-car 450 – however can stand a 12-car 450 and allow route for following train to Up Main Relief)
UMR (Signal W6)	150 metres (5-car 442/444/458/707- however can stand a 12-car 450 and allow route for following train to MFL)
UW (Signal W10)	97 metres (4-car 450/455)
RVL (Signal W8)	97 metres (4-car 450/455)
WR1 (Signal W906)	Cannot stand at this signal – route must be set into platform
WR2 (Signal W908)	5-car to be clear of International Junction, if 10-car from Up Windsor then fouls both Up Windsor and Windsor Reversible

**Waterloo West Crossings****Adjustment to Sectional Running Times**

Trains weaving between different running lines at Waterloo West Crossings do not require the standard  $\{\frac{1}{2}\}$  as it is already included in the SRT.

**Eastleigh****Adjustment to Sectional Running Times**

Movement	Reason	Value
Up passenger trains from Southampton Airport Parkway to Platforms 2 and 3	Approach Control	{½}
Up freight approaching Eastleigh via Up Fast Line and passing through platforms. (Not applicable where freight stop in the platform for operational purposes as the adjustment is incorporated into the SRT).	Speed Differential	{1½}

Down services crossing over to stop or entering the loop to stop, and up services entering Platform 1 do not require the standard {½} as it is already included in the SRT's.

**The following additional allowances should be utilised between Eastleigh and St Denys for Down Freight trains passing through Platforms 2 and 3 at Eastleigh or passing via DFL from the Romsey Line**

Train Class	Trailing Load	Reason	Value
Class 6	0 – 800t	Up to TR40	Speed Differential
	801 – 1200t	TR55 – TR70	Speed Differential
	1201 – 1800t	TR85 – TR100	Speed Differential
	1801 – 2400t	TR115 – TR130	Speed Differential
Class 4	0 – 400t	TR20	Speed Differential
	401 – 600t	TR30	Speed Differential

Eastleigh				
	601 – 800t	TR40	Speed Differential	{2½}
	801 – 1200t	TR50 – TR70	Speed Differential	{3}
	1201 – 1600t	TR80 – TR90	Speed Differential	{3½}
	1601 – 1800t	TR100	Speed Differential	{4}

Up arrival into Platform 2	Down arrival into Platform 3 from Down Fast/Chandlers Ford; or up departure from Platform 3 towards Up Fast/Chandlers Ford.
Up arrival into Platform 3 from Eastleigh South Junction/Eastleigh TMD/Works	Down arrival into Platform 2 at the same time as a train passing on the Down Fast

**Eastleigh Depot Ent/Ext Signal****Junction Margins**

First Movement	Second Movement	Margin
Between all movements		1

**Eastleigh T&R.S.M.D****Acceptance of Trains**

Minimum margin	10*
----------------	-----

\* Applies to trains arriving via the same route

Margin between consecutive arrivals of CrossCountry class 22x via the Depot Exit Road may be reduced as follows:

- If the first train is formed of 5 cars or less the margin can be reduced to 5-minutes.
- If the first train is formed of more than 5 cars the margin is 10-minutes.

A 10-minute margin is to be applied between consecutive arrivals via Eastleigh South Junction.

**Despatch of Trains**

Minimum margin	10*
----------------	-----

\* Applies to trains departing via the same route

**Eastleigh Jubilee Sidings****Station Working Requirements**

Access is only available by use of a 'Shunters Release' which enables Eastleigh Signalling Centre to set the route.

**Eastleigh Up Loop****Freight Restrictions**

Pathing Allowance time of no more than 1 minute should be shown for Freight trains using the Up Loop; otherwise a stop should be shown at signal E85.

Standage at E85 signal is 519m (approx. 81 SLU) clear of the overlap to E337 signal, or 1053m (approx. 164 SLU) clear of 466 points.

Standage at E337 signal is 354m (approx. 55 SLU) clear of 466 points.

Freight may depart E85 signal 1 minute after the previous Passenger service has departed Eastleigh platform 1.

N.b. the above length limits are total train length, not including stand-back from signals.

**Southampton Airport Parkway****Adjustment to Sectional Running Times**

Movements	Reason	Value
Up non-stop trains towards Eastleigh Up Loop via Up SL*	Speed Differential	{½}
*to be shown approaching Southampton Airport Parkway.		

**Dwell Times**

All Off-Peak Services except as shown below	1
All Peak Services except as shown below	1½
Class 158/9 trains formed of 2 or 3 cars only	1
CrossCountry Services	1½

**Note:**

For a Freight Standing at Signal E85 in Eastleigh Up Loop a following Passenger/Freight service would not be able to depart/Pass Southampton Airport Parkway onto the Up SL until 1 minute after the Freight had departed Eastleigh platform 1.

A Passenger Service could depart Southampton Airport Parkway onto the SL 1 minute after a passenger unit standing at Signal E85 in Eastleigh Up Loop had departed the Signal.

**St. Denys****Adjustment to Sectional Running Times**

Movements	Reason	Value
Down freight trains from Eastleigh direction routed SL	Approach control	{1½}
Down passenger trains from Eastleigh direction routed SL	Approach control	{1}
Up trains towards Fareham except for Class 377	Speed differential	{½}

**Dwell Times**

<b>St. Denys</b>		
Class 450 all services to/from Fareham	1	
<b>Length Restrictions</b>		
Trains exceeding the following lengths will foul Mount Pleasant LC: Down Slow line (E711 signal): 306m (but foul of access to Northam Nos.1 and 2 Receptions) Down Slow line (E711 signal): 258m (clear of access to Northam Nos.1 and 2 Receptions) Down Fast line (E713 signal): 238m (can be 306m but E705 signal at St Denys becomes approach controlled) Up Fast line (E704 signal): 491m Up Slow line (E706 signal): 492m (but foul of access to Bevois Park Nos.1 and 2 Receptions) Up Slow line (E706 signal): 405m (clear of access to Bevois Park Nos.1 and 2 Receptions)		
The above figures represent total length from signal to block joint. Signal standback allowance is not included – stand-back from signals must be deducted from these values.		
Pathing and dwell times must not exceed 2 minutes unless the train concerned is shorter than the above length limits.		
<b>Junction Margins</b>		
<b>First Movement</b>	<b>Second Movement</b>	<b>Margin</b>

**Note:** A down train may not depart in the down direction towards Honiton if the preceeding down train is signalled into or occupies the Down Platform at Honiton.

**Honiton****Adjustment to Sectional Running Times**

Movement	Reason	Value
----------	--------	-------

<b>Honiton</b>		
Loco Hauled & HST Only Up trains approaching Honiton Up Loop	Approach Control & Speed Differential	{1½}
<b>Dwell Times</b>		
Class 159 DMU	1½	
<b>Junction Margins</b>		
<b>First Movement</b>	<b>Second Movement</b>	<b>Margin</b>
Re-occupation of Single Line		*
* Arrive 2 minutes before crossing, depart 1 minute after		
<b>Note:</b> A down train may not depart Axminster West Junction in the down direction towards Honiton if the preceding down train is signalled into or occupies the Down Platform at Honiton.		
<b>Note:</b> A train departing Pinhoe Platform 1 to shunt behind Signal EJ1 prevents a train in the Down direction from being signalled beyond Honiton station. Therefore, any Down direction trains must be planned to depart Honiton no less than 1 minute after a shunt move has arrived into Pinhoe Platform 2.		
<b>Permissive Working</b>		
Attaching/Detaching and Platform Sharing is authorised as shown below -		
Platform 1	Down Exeter	Detaching only
Platform 2	Up Loop	Prohibited
<b>Operating Restriction</b>		
The Up Loop is NOT reversibly signalled and a down train can not enter the Up Loop. An Up train that has terminated in the Up Loop may be signalled back towards Exeter from this loop.		

<b>Pinhoe</b>		
<b>Junction Margins</b>		
<b>First Movement</b>	<b>Second Movement</b>	<b>Margin</b>
Re-occupation of Single Line		3*
* 1 minute from standing start		
<b>Planning Note</b>		
A train that is required to depart Pinhoe Platform 1 in the Up direction and shunt behind Signal EJ1 prevents a train in the Down direction from being signalled beyond Honiton station (SE4807 or SE4809). Therefore, any Down direction trains must be planned to depart Honiton no less than 1 minute after a shunt move has arrived into Pinhoe Platform 2.		
Changes here to be consulted in tandem with the GW610 on the Western & Wales route.		

<b>SW115A ANDOVER TO LUDGERSHALL MOD</b>		
<b>Andover</b>		
See entry under route – SW115		

<b>Ludgershall Branch Stop Board</b>		
All associated freight trains require a 5 minute OP stop at this location in order for the shunter to operate the ground frame.		

**Ludgershall Loop**

Although the loop is on NR property, the country end points are on MOD property and therefore requires MOD authority prior to the loop being available for use.

**SW115B LAVERSTOCK NORTH JUNCTION TO LAVERSTOCK SOUTH JUNCTION****Laverstock North Junction**

**Fareham Sidings****Station Working Requirements**

**Fareham Sidings**

Access is only available by use of a 'Shunters Release' which enables Eastleigh Area Signalling centre to set the route

**Berthing Facilities**

	Length	Notes
Siding 1	Length Limit 36 SLU (230 metres)	No long term berthing permitted

**Permissive Working**

Attaching/Detaching and Platform Sharing is authorised as shown below -

Siding 1 (Non Electrified)	Network Siding	Attaching/Detaching
Siding 2 (Non Electrified)	DBS Leased Siding	-

\* This is only possible with agreement via the Eastleigh Panel and with the availability of a Shunter on the ground.

**Fareham****Dwell Times**

All Services	1½
--------------	----

**Extract from Sectional Appendix Local Instructions Fareham**

All drivers of terminating trains which require shunting via either the Up Netley or Up Portsmouth lines must contact the signaller before any movement is made, even if a signal is already cleared. This is to ensure that the signaller is aware of and has a clear understanding of the movement to be made

**Junction Margins**

First Movement	Second Movement	Margin
Between all movements except as below		3*
Service arriving from Netley Line	Departure towards Eastleigh Line	1

**Note:** When down trains of more than 8 coaches call at Fareham they overhang the Junction. Therefore, Junction Margins will need to be applied based on the departure from Fareham.

\* It may be necessary to apply additional time for Trains arriving/departing Fareham Siding using Platform 3 to reverse as they will need to confirm they are clear of points 590 with Eastleigh Signal Centre.

**Trains shunting via 283 Signal:** Due to overlap restrictions an up train cannot arrive into platform 1 from Portchester whilst a shunt move is taking place via 283 signal.

**Permissive Working**

Attaching/Detaching and Platform Sharing is authorised as shown below -

Platform 1	Up Portsmouth	(Up direction)	Attaching/Detaching *
Platform 2	Up Bay		Prohibited
Platform 3	Down Portsmouth	(Down direction)	Detaching only

\* A second train is prohibited from entering this Platform if it will not attach to the first train

**Platform Re-occupation**

**Barnes****Simultaneous Moves Not Permitted**

Train departs/passes Platform 4 towards Barnes Bridge	Down train arrives Platform 3
---	-------------------------------

**Terminating Trains Procedure**

Barnes Junction allows trains to be terminated on the Up Lines and sent back towards Richmond or towards Hounslow.

**Up train via Richmond and forming a Down train towards Richmond**

Train runs into either Up Platform at Barnes but Platform 2 retains the most flexibility.

The driver will change ends and inform the signaller when ready to proceed, who will then set the route and clear the signal. The signaller will clear the signal (either W529 or W527 whichever is appropriate) and route the train over Vine Road (Richmond Line) crossing and 2589 points onto the Down Richmond Line.

**Up train via Hounslow and forming a Down train towards Hounslow**

Train runs into either Up Platform at Barnes but Platform 2 retains the most operating flexibility

The driver will then change ends and inform the signaller when ready to proceed, who will then set the route and clear the signal

The train is routed onto Down Richmond behind shunt signal W1090 and is brought to a stand

The driver will again change ends and inform the signaller when ready to proceed

Shunt signal W1090 will then be cleared and the train routed over Vine Road (Richmond Line) CCTV level crossing to LOS signal W1092 (platform 4)

The driver will again change ends and inform the signaller when ready to proceed

The signaller will signal W523 and route the train over Vine Road crossing (Hounslow Line) to the Down Hounslow Line

Up Platform (clear of F254)		8 cars	
<b>Permissive Working</b>			
Attaching/Detaching and Platform Sharing is authorised as shown below -			
Platform 1	Up Main	(Up direction)	Attaching/Detaching
Platform 2	Down Main	(Down direction)	Attaching* /Detaching#
* The second portion is not permitted to approach from the Down Main line			
# 10-car trains cannot detach in platform 2			
<b>Restrictions</b>			
10-car trains cannot reverse in platform 2 due to signal sighting.			
Up trains from Virginia Water longer than 10-cars calling in platform 1 will prevent down departures towards Windsor – the junction margin must be based on the departure time of the up train in this instance. This restriction also applies to 10-car class 442/444 calling in platform 1.

**Kew Bridge****Restriction for when trains are planned to terminate and start from the Up platform via F433 Signal**

When planned and published in the relevant operating notice, multiple unit trains conveying passengers or running as e.c.s. are authorised to terminate and start back from the Up Hounslow platform at Kew Bridge on the authority of position-light signal F433. During these arrangements no conflicting movements can be signalled across Old Kew Junction until the train on the Up Hounslow line has returned to the Down Hounslow line and has cleared beyond F137 signal.

## 5.4 Platform Lengths

The table below shows the maximum length of train that may use each of the Platforms at the following passenger stations. All lengths are in metres. The quoted lengths are the usable lengths from ramp to ramp unless specified. The measurements take no account of the need for signal sighting. Trains longer than the quoted lengths will only be accepted subject to the authority of the Route Director.

### 5.4.1 Loop Lengths

The table below shows the maximum length of train that may use each of the loops at the following locations. All lengths are in SLU (Standard Length Unit – an SLU measures 21 feet) and metres. All lengths are measured from the signal at the exit to the loop to the block joint in rear unless stated otherwise. All lengths quoted exclude allowance for locomotives or stand back unless stated otherwise. Check Sectional Appendix for locations where standage is not quoted.

<b>SW105 CLAPHAM JUNCTION TO WEYMOUTH</b>				
LOCATION	DIRECTION	USABLE LENGTH		NOTES
		SLU	METRES	
Wallers Ash Up Passenger Loop	Up	125	805	
Wallers Ash Down Passenger Loop	Down	173	1108	
Southampton Up Goods Loop	Up / Down	67	433	Between E748 and E753
Southampton Down Loop	Down	69	443	Between E743 and E738
Southampton Down Loop	Up	69	443	At E738 Signal clear of 536A points
Southampton Down Loop	Up	116	745	At E738 Signal clear of 539B points

<b>SW210 CLAPHAM JUNCTION TO READING (VIA RICHMOND)</b>				
LOCATION	DIRECTION	USABLE LENGTH		NOTES
		SLU	METRES	
Staines Up Goods Loop	Up	34	217	
Staines Down Goods Loop	Down	48	307	

## 5.5 Timing Allowances

All allowances shown are in minutes.

SX Daytime allowances apply at all times except where specified differently in Sections 5.5.2, 5.5.3, 5.5.4, 5.5.5 and 5.5.6 The locations at which allowances are included within a Train Slot may vary. The total allowance included within a Train Slot will not exceed the maximum value allowed.

All allowances are indicative for the Final Principle Rules and are subject to change.

E [ ] refers to engineering allowance

P < > refers to performance allowances

A { } refers to adjustment allowances (passing over slow crossovers etc.)

### Light Engine Movements

All light engine movements will be timed in accordance with National and regional Timetable Planning Rules

### Turning moves via Laverstock South and North Junction

All “turning moves” of multiple units and steam locomotives, must be made from Laverstock South to Laverstock North Junctions.

### 5.5.1 SX Daytime (See routes for applicable times)

On Monday different allowances apply on some routes until the end of the 'Sunday' allowances at the times specified in the tables below. Please refer to Section 5.5.4 for the 'Sunday' allowances section to identify the routes to which those allowances apply.

### 5.5.2 Sundays Daytime (See routes for applicable times)

SX daytime allowances apply to those routes excluded from this section.

<b>Engineering recovery allowances</b>		
<b>SUNDAYS - DOWN SERVICES</b>		
		<b>Allowance</b>
Waterloo - Bournemouth/Poole	Approaching Bournemouth	[2]*
Waterloo – Weymouth	Approaching Weymouth	[2]*
Waterloo - Portsmouth via Woking	Approaching Guildford	[1]*
Waterloo - West of England	Approaching Salisbury Tunnel Junction	[2]*
* The foregoing does not apply to trains		
◇ which are timed through the Waterloo - Wimbledon "two-line railway" section as shown in section 3.3 of the Rules of the Route		
◇ which are amended under Short Term Plan arrangements		
<b>Engineering recovery allowances</b>		
<b>SUNDAYS – UP SERVICES</b>		
		<b>Allowance</b>
Weymouth/ Poole/ Bournemouth/ West of England - Waterloo	Approaching Woking	[2]*
Weymouth/ Poole/ Bournemouth/ West of England - Waterloo	Approaching Wimbledon	[1]*
* The foregoing does not apply to trains which are amended under Short Term Plan arrangements		

## 6 Timetabling Considerations

### 6.1 Advertised and Working Times

It is not permissible for trains to be specified to be advertised to arrive before or depart after the booked times stated in the working timetable (WTT).

It is permissible for trains to be specified to be advertised to depart before the booked times stated in the working timetable in the following circumstances;

- (i) Where the WTT departure time is delayed to achieve the required headway behind a preceding train or margin following a conflicting move.
- (ii) As an aid to punctual departure where this practice has been agreed between the Train Operator and Network Rail.

By agreement between the Train Operator and Network Rail, trains may be specified to be advertised to arrive after the booked times stated in the WTT. This agreement is used instead of engineering/performance allowances.

<b>Weekdays (Monday to Saturday)</b>		
<b>Movement</b>	<b>Differential</b>	<b>Reason</b>
All SX trains arriving at Waterloo between 0700 and 1000	Advertised to arrive 2 minutes later than the WTT time	
All SX trains departing from Waterloo between 1600 and 1900	Advertised to arrive 2 minutes later than the WTT time at the ultimate destination UNLESS by doing so onward connections are severed. Such instances must be agreed by the service specifier's performance manager.	
Other trains may be advertised to depart earlier or later at the discretion of the service specifier		In order to maintain standard departure patterns

### 6.2 Timing of Light Locomotives

It is a general principle that all light locomotive movements will be timed. Any exceptions to this must be agreed by the appropriate Area Timing Specialist.

### 6.3 Two-Track Timetable Railway

On the following sections of route the timetable will be planned such that it can be operated over two tracks (one Down and one Up) over the sections of line shown below.

<b>LOCATION/LIMITS</b>	<b>LINES</b>	<b>DAYS</b>	<b>TIMES</b>
Waterloo to Queenstown Road Platforms 1-10 to 615B, 614B, 613B, 612B Points	Down Main Slow Down Main Fast Up Main Slow Up Main Fast	TWThF & Su	0015 to 0505
