

23 October 2020

## Commentary on the Western & Wales Timetable Planning Rules 2022

### Version 1.0

### Final Principal and Preliminary Proposal for Principle Timetable Change 2022

This document is a covering note for the Timetable Planning Rules – Final Principal and Preliminary Proposal for Principle Change Timetable 2022 – and provides a specific commentary to the route described above.

In the Timetable Planning Rules document each change in content is indicated by the following convention:

New or Amended text is red

~~Deleted text is green and struck through~~

The change is also highlighted with a thick vertical line at the right hand side of the page.

The following is a summary of changes in content from Version 1.0 of the 2022 Timetable Planning Rules.

## 1 Introduction and General Notes

### 1.1 Index Of Routes

## 2 Route Description

### 2.1 Planning Geography

<b>GW200</b>	Hinksey North is now mandatory
<b>GW510</b>	Added BL1990, mandatory in the up direction
<b>GW277</b>	Removed planning geography and advised to refer to North Western and Central TPRs to avoid planner confusion when validating this LOR.
<b>GW105</b>	At Bristol East Junction, replicated note at Bristol Temple Meads regarding line codes
<b>GW450</b>	At Dr Days Jn, removed UR and UF route codes as not needed
<b>GW450</b>	At Bristol East Junction, removed line codes to show only UF and UR in Up direction. And added planning note regarding Line codes
<b>GW530</b>	At North Somerset Jn, removed the line codes in the Up direction.
<b>GW510</b>	Added BL1995 in down direction as stopping location.
<b>GW500</b>	Towney down loop and Hungerford loop now mandatory

## 2.2 Route Opening Hours

## 5 Running Times, Margins and Allowances

### 5.2 Headways

<b>GW510</b>	Amended headways to show new BL1990 timing point in the up direction.
<b>GW277</b>	Removed headways along this LOR and advised to refer to North Western and Central Rules for consistency.
<b>GW660</b>	Amended headways to better show planning sections
<b>GW401</b>	Amended headway to be 3 not 4
<b>GW500</b>	Amended headways at several locations.

### 5.3 Junction Margins and Station Planning Rules

<b>GW610</b>	Amended Honiton to Feniton in the up direction.
<b>GW103</b>	Removed *note from Twyford adjustment allowances
<b>GW103</b>	Added new adjustment allowances at Hayes and Harlington
<b>GW103</b>	Amended Platform end margin to be junction margins, added 8 new margins and removed 1.
<b>GW103</b>	At Hayes and Harlington, removed freight restriction
<b>GW103</b>	At Slough, amended junction margin to specify platform 5
<b>NW3001</b>	Amended dwell time for LH to be 1.5 min vice 1
<b>GW103</b>	Added note regarding not sharing a platform with a 9 car MTR unit.
<b>GW108</b>	At Taunton, added a junction margin for a departure from 4/5/6 in the up and a departure from 2/3 in the up.
<b>GW108</b>	At Newton Abbot, added planning note that the standard 2 minute platform end conflict margin doesn't apply at the West End of the station.
<b>GW107</b>	amended rules at Weston-Super-Mare for single line reoccupation.
<b>GW450</b>	Added planning note at Lawrence Hill to restrict planning of RL to DF weave.
<b>GW108</b>	Added a junction margin at Newton Abbot for a departure from p1 and an arrival into p1 or p2
<b>Standard Values</b>	Updated pathing rule for freight, to add when pathing of greater than 2 minutes.
<b>GW105</b>	Amended junction margin at Bristol East Junction to better explain the rule.
<b>GW108</b>	At Plymouth, updated dwell times
<b>GW450</b>	At Filton Abbey Wood, amended dwell time to be a blanket 1'30 for all traffic.
<b>GW830</b>	At Cadoxton, added dwell time of 1 minute
<b>GW830</b>	Added new table for Cogan and new dwell times of 1 minute
<b>GW500</b>	Added dwell time of 1 minute at Reading West

### 5.4 Platform Lengths

#### 5.4.1 Loop Lengths

<b>GW874</b>	Removed table as nothing in it.
	Amended loop lengths to show in metres as well as SLU

### 5.5.1 Timing Allowances

---

These represent the revised Timetable Planning Rules (the “Draft Rules”) for the Final Principal and Preliminary Proposal for Principle Change Timetable 2022 in accordance with Part D of the Network Code, Condition D2.2.3.

As per Condition D2.2.4 of Part D of the Network Code, following distribution of the Draft Rules and by D-54, Timetable Participants may make representations to Network Rail in respect of any changes they propose or objections they may have to the Draft Rules provided to them in accordance with D2.2.3.

Regards

# 1 Introduction and General Notes

Network Rail provide the Timetable Planning Rules document to Train Operators and other interested parties to set out the rules which are applicable to Access Requests for scheduling of train paths on the Network Rail network. Separate sections of Timetable Planning Rules are prepared for each Route with a National Timetable Planning Rules document setting out procedures to be followed and other nationally applicable rules.

Network Rail will determine the contents of Timetable Planning Rules through consultation with Train Operators with the primary aim of achieving the optimal balance between access to the network for train operations and performance robustness of the resulting train plan. This consultation is in line with the Network Code Part D, and Train Operators have a right of appeal to Timetabling Sub-Committee against the contents of the Final Timetable Planning Rules.

Final Timetable Planning Rules are issued with timetable Access Request Information before the commencement of the development period for the Principal Change timetable to which the Rules apply and cover a 12-month period. Revised Timetable Planning Rules are issued with timetable Access Request Information before the commencement of the Subsidiary Change timetable development period and show changes applicable to the Subsidiary Change timetable period, which have been agreed since the issue of the annual Timetable Planning Rules.

Timetable Planning Rules may be changed only through this twice-yearly process or by the change procedure described in the National Timetable Planning Rules.

Train Operators' Access Requests for train paths must be compliant with Timetable Planning Rules. If a Train Operator wishes to submit an Access Request for a train path which is not compliant with Timetable Planning Rules, it should consult the Network Rail Capacity Planning team to establish whether an amendment to Timetable Planning Rules is likely to be agreed and, if appropriate, submit an amendment proposal which will be considered by Network Rail in accordance with the Change Procedure set out in the National Timetable Planning Rules. The Timetable Planning Rules amendment proposal should be submitted to Network Rail as early as possible and certainly no later than the time of submission of the Access Request. If the proposed change is likely to involve the calculation of new sectional running times or a physical investigation, then the Train Operator should liaise with the Capacity Planning team to establish a realistic timescale for evaluation of the proposed change before submission of the Access Request.

## 1.1 Index of Routes

Information arranged on a line of route basis in this document is presented in the following order:

GW103	Paddington to Uffington
GW105	Uffington to Fordgate via Box
GW107	Worle to Uphill via Weston–super–Mare
GW108	Fordgate to Penzance
GW110	Old Oak Common West to South Ruislip (excl.)
GW117	Greenford East Jn to Greenford South Jn
GW130	Acton Wells Junction to Acton East Jn
GW174	West Ealing to Greenford West Junction
GW175	Greenford South Jn to Greenford
GW176	Hanwell to Drayton Green
GW178	Southall to Brentford Goods
GW180	Heathrow Airport Junction to Heathrow Terminals 4 & 5
GW182	West Drayton to Colnbrook
GW184	Slough to Windsor & Eton
GW185	Maidenhead to Marlow
GW187	Twyford to Henley–on–Thames
GW190	Reading Spur Jn to Reading New Jn
GW200	Didcot to Heyford (excl.)
GW220	Oxford Road Jn to Reading West Jn
GW225	Reading caversham road jn to Oxford road jn (Reading feeder lines)
GW240	Didcot East Jn to Didcot North Jn
GW250	Foxhall Jn to Didcot West Curve Jn
GW260	Kennington Junction to Cowley
GW277	Oxford North Jn to Oxford Parkway
GW300	Abbotswood Junction to Stoke Works Junction. via Worcester
GW310	Wolvercote Junction to Norton Junction.
GW317	Honeybourne North Junction to Long Marston
GW340	Worcester Shrub Hill to Shelwick Junction
GW350	Worcester Tunnel Junction to Henwick
GW370	Droitwich Spa to Cutnall Green
GW401	Ashchurch (incl.) to Westerleigh Junction
GW425	Berkeley Road Junction to Sharpness
GW430	Yate Middle Junction to Tytherington
GW440	Yate South Junction to Westerleigh
GW450	Stoke Gifford Junction to Bristol East Junction
GW4501	Stoke Gifford Junction to Bristol Bulk Handling Terminal
GW451	Filton Junction to Filton West Junction (Filton Chord)
GW454	Severn Beach to Narrowways Hill Junction
GW456	Lawrence Hill to Barrow Road RTS
GW480	Swindon to Standish Junction
GW490	Gloucester Yard Junction to Horton Road Junction
GW500	Reading to Cogload Junction via Westbury and Frome avoiding lines (Berks. and Hants line)
GW5001	Beechgrove GF to Westbury South Junction
GW510	Westbury North Junction to Bathampton Jn
GW520	Westbury East Loop Jn to Hawkeridge Jn
GW523	Thingley Jn to Bradford Junction
GW528	North Somerset Junction to Bristol West Junction ( <i>Great Western Railway lease from Dec 2006</i> )
GW530	North Somerset Jn to Dr. Days Jn (“Rhubarb Loop”)
GW540	Filton Junction to Patchway Junction

GW5401	Filton West Junction to Patchway Junction (Patchway Chord)
GW548	Parson Street Junction to Portbury Terminals
GW560	Heywood Road Junction to Fairwood Junction via Westbury
GW570	Clink Road Junction to Blatchbridge Junction via Frome
GW572	Frome North Junction to Whatley Quarry
GW580	East Somerset Junction to Cranmore
GW600	Wootton Bassett Junction to Pilning
GW606	Cowley Bridge Junction to Barnstaple
GW608	Crediton to Coleford (Meldon Line)
GW610	Crannaford L.C. (incl.) to Exeter St. David's
GW611	Exmouth Jn to Exmouth
GW618	Newton Abbot East Junction to Heathfield
GW620	Newton Abbot West Junction to Goodrington C.S.
GW628	Laira Jn to Cattewater via Speedway Jn
GW629	Laira Jn to Mount Gould Jn
GW630	Lipson Jn to Mount Gould Jn
GW637	St. Budeaux Junction to Gunnislake
GW640	Liskeard to Looe via Coombe
GW642	Coombe (excl.) to Moorswater
GW650	Lostwithiel to Carne Point, Fowey
GW660	Par to Newquay
GW672	Burngullow to Parkandillack
GW680	Penwithers Junction to Falmouth
GW690	St. Erth to St. Ives
GW700	Gloucester Barnwood Junction to Severn Tunnel Jn
GW710	Llanwern Steelworks East Connection to Llanwern Steelworks West Connection via Service Lines (Tata Steel infrastructure)
GW720	Fifoots Point Power Station to East Usk GF
GW730	Severn Bridge Jn to Newport Maindee West Jn
GW731	Abbey Foregate to Wrexham North Jn
GW732	Abbey Foregate Jn to English Bridge Jn
GW733	Sutton Bridge Junction to Aberystwyth
GW734	Dovey Junction to Pwllheli
GW735	Shrewsbury Crewe Junction to Gresty Lane
GW740	Maindee East Jn to Maindee North Jn
GW750	Hereford Brecon Curve GF to MEB Siding
GW770	Ebbw Vale Town to Gaer Junction
GW773	Machen Quarry to Park Junction
GW780	Park Jn to Ebbw Jn
GW784	Alexandra Dock Junction to 160 miles 27 chains (boundary with ABP Newport Docks)
GW790	Pengam Junction to 4m 54ch (ABP) Cardiff Docks
GW810	Rhymney to Queen Street North Junction
GW820	Cwmbargoed to Ystrad Mynach South
GW828	Coryton to Heath Junction
GW830	Merthyr Tydfil to Barry Island via Cardiff Queen Street
GW834	Hirwaun to Abercynon
GW835	Treherbert to Pontypridd Junction
GW839	Queen Street South Junction to Cardiff Bay
GW840	Radyr Junction to Cardiff Radyr Branch Junction via City Lines
GW850	Leckwith Loop North Jn to Leckwith Loop South Jn
GW860	Penarth Curve North Jn to Penarth Curve South Jn
GW864	Cogan Junction to Penarth
GW870	Barry to Bridgend Barry Junction (Vale of Glamorgan Line)
GW874	Bridgend Llynfi Junction to Maesteg
GW875	Tondu Junction to Garw Loop

GW877	Tondu to Port Talbot Docks (Ogmore Vale Extension Line)
GW890	Court Sart Junction/Up Flying Loop Junction to Morlais Junction (Swansea District Line)
GW8901	Dynevor Junction to Jersey Marine Junction South
GW892	Cwmgwrach to Burrows Sidings
GW893	Onllwyn to Neath and Brecon Junction
GW894	Jersey Marine Junction North to Jersey Marine Junction South
GW897	Grovesend Colliery Loop Junction to Hendy Junction
GW900	Pilning to Fishguard Harbour
GW9001	Landore Junction to Swansea
GW906	Swansea Loop East Junction to Swansea Loop West Junction
GW910	Craven Arms Junction to Llandeilo Junction (Central Wales Line)
GW915	Gwaun-cae-Gurwen to Pantyffynnon
GW930	Carmarthen Station to Carmarthen Junction
GW940	Carmarthen Station to Carmarthen Bridge Junction
GW950	Whitland to Pembroke Dock
GW960	Clarbeston Road to Milford Haven
GW970	Gulf Oil Branch Junction to Waterston Gulf Oil Refinery
GW980	Herbrandston Junction to Robeston Amoco Sidings
NW3001	Saltney Jn to Holyhead
NW3007	Wrexham Central to Neston
NW3015	Llandudno Junction to Blaenau Ffestiniog
NW3017	Llandudno Junction to Llandudno

## 1.2 Sectional Appendices and Rule Book

### 1.2.1 Sectional Appendix

The Sectional Appendix to the Working Timetable and Books of Rules and Regulations shall be used.

The Sectional Appendix is the sole source of information regarding the following:

Electrification limits refer to relevant Table 'A'

Permissive Working refer to relevant Table 'A', then see below.

Route Clearance refer to 'tab' associated with relevant Table 'A'

To identify the type of Permissive Working that applies at a given location refer to the appropriate Sectional Appendix Table A for that location. If there is authority for Permissive Working, this will appear in the Signalling and Remarks. There are different authorities that depend upon the signalling and layout of the location. The following list identifies the types of Permissive Working that will appear in the Sectional Appendix.

Type	Description
PP	Permissive Working – full use for class 1, 2, 3 ECS, 5, 9 and 0 trains
PP – A	Permissive Working – Attaching and Detaching use only for class 1, 2, 3 ECS, 5, 9 and 0 trains
PP – C	Permissive Working – Contingency use only for class 1, 2, 3 ECS, 5, 9 and 0 trains
PP – S	Permissive Working – Platform Sharing use only for class 1, 2, 3 ECS, 5, 9 and 0 trains
PF	Permissive Working for class 3 to 8 and 0 trains

Source: Sectional Appendix – General Instructions – National – Explanation of Table A terms and symbols

### 1.2.2 Rule Book

The following Modules of the Rule Book GE/RT8000 affects all sections unless specified. The sections listed affect railway operations and train movements. The listed section does not apply to Train Planning directly, but its application will affect how trains operate, and it is for that reason the item appears here.

RULE BOOK MODULE	SECTION	NOTES
G1 General safety responsibilities and personal track safety for non-track workers	5.5 Using the phonetic alphabet;	Operational principles
OTM Working of on-track machines (OTM)	2.2 Before starting a journey	TPR Section 4.6
	5.6 Carrying out a running brake test	TPR Section 5.1.2
P1 Single line working	6.5 Warning anyone working on or near the line used for single line working	When planning Single Line Working
	9.3 Right-direction movements	
	9.4 Wrong-direction movements	
S1 Signals and indicators controlling train movements		Operational principles
S2 Observing and obeying fixed signals	3.1 Passenger train at a position-light, shunt-ahead or shunting signal	Operational principles
SP Speeds	2.4 Differential permissible speed indicators	TPR Section 5.1.2
	2.5 Permissible speed indicators with letters	TPR Section 5.1.2

<b>RULE BOOK MODULE</b>	<b>SECTION</b>	<b>NOTES</b>
	2.6 Enhanced permissible speed (EPS) indicators	TPR Section 5.1.2
T11 Movement of engineering trains and on-track plant under T3 arrangements	3 Movements entering the possession	When planning trains entering possessions
	7 Instructing the driver or machine controller	When planning trains entering possessions
TW1 Preparation and movement of trains General	7.1 Authority and arrangements for movements (Hauling dead traction units)	Operational principles
TW2 Preparation and movement of multiple-unit passenger trains	6.5 Carrying out a running brake test	TPR Section 5.1.2
TW3 Preparation and movement of locomotive hauled trains (including HSTs, push-pull, postal, parcels)	2.1 Locomotives running light or hauling trains (Maximum speed of);	TPR Section 5.1.2
	2.2 Maximum permitted speed of locomotive-hauled trains	TPR Section 5.1.2
	2.3 Electric-traction speed restrictions	TPR Section 5.1.2
	3.16 Carrying out a running brake test	TPR Section 5.1.2
	Section 14.1 Working trains with locomotives at both ends, when this type of working is permitted	Operational principles
Rule Book Handbook 5 Handsignalling Duties	Section 5.2 Entrance signal	When planning Temporary Block Working (TBW)
	5.3 Exit signal	When planning Temporary Block Working (TBW)
	5.4 Where TBW is divided into two sections	When planning Temporary Block Working (TBW)

## 1.3 Definitions

The list below is not an exhaustive one but is intended to give readers an understanding of some of the terminology as used for the purposes of this document.

If any term in Timetable Planning Rules is unclear please contact the compiler on the telephone number shown on the cover.

### 1.3.1 Train Classification

Classification	Description
1	Express passenger train; or Nominated postal or parcels train; or Breakdown or overhead line equipment train going to clear the line or returning from there (1Z99); or Traction unit going to assist a failed train (1Z99) Snow plough going to clear the line (1Z99)
9	A train formed of a Class 373 unit or other passenger train if specially authorised
2	Ordinary passenger train; or Breakdown or overhead line equipment train not going to clear the line (2Z99) Officers' special train (2Z01)
3	Freight train which can run at more than 75 mph; or A parcels train; or Empty coaching stock train if specially authorised ; or a Network Rail Infrastructure Monitoring Train (3Qxx)
4	Freight train which can run up to 75 mph
5	Empty coaching stock train
6	Freight train which can run up to 60 mph
7	Freight train which can run up to 45 mph
8	Freight train which can run at, or is timed to run at, 35 mph or less
0	Light locomotive or locomotives

Source: The Rule Book GE/RT8000/TW1 Preparation and Movement of Trains General Section 2 Classification and speed of trains

### 1.3.2 Days of Operation

The following abbreviations are used to identify the day or days that a train operates.

Abbreviation	Description
M	Monday
T	Tuesday
W	Wednesday
Th	Thursday
F	Friday
S	Saturday
Su	Sunday
EWD	Every Week Day (Monday to Saturday)
Daily	Every day – Integrated Train Planning System (ITPS) will not accept this; there must be a separate entry for Sundays.
<b>Suffixes</b>	
O	Adding this indicates that the train will run only on that day or those days shown
X	Adding this indicates that the train will not run on that day or those days shown
<b>General</b>	
BHX	Denotes that this train does not run on a bank holiday

### 1.3.3 Traction and Rolling Stock

Abbreviation	Description
15X	DMU classes 150/153/155/156/158/159
17X	DMU classes 170/171/172 and 175
22X	DMU classes 220/221/222
230	DMU Class 230
769	Bi-mode class 769
80X	Bi-mode classes 800/802
Castle	"Mini HST" GWR 2+4 HST (HSTGW4)
DMU	Any diesel multiple unit (incl. GWR Castle Class (HST) & 769 in diesel mode) (excluding classes 180/22X)
EMU	Any electric multiple unit (incl. 769 in electric mode)
ECS	Empty Coaching Stock includes empty diesel and electric multiple units.
HST	Trains consisting of two Class 43 locomotives and Mk 3 passenger vehicles (except for GWR (HST) Castle class)
LH	A passenger or parcels train hauled or propelled by one or more locomotives
LHCV	Locomotive hauled coaching vehicles
Power	Passenger stock equipped with power operated external doors
Power Door DMU	Class 142, 143, 144, 150, 153, 156, 158, 159, 165, 166, 168, 170, 171, 172, 175, 180, 220, 221, 222

### 1.3.4 Line Codes

Abbreviation	Description
-	Default Line Code as indicated in Section 2.1
1	Line 1
2	Line 2
3	Line 3
4	Line 4
5	Line 5
6	Line 6
A	Line A
AB	Line A to Line B
B	Line B
BAY	Bay Line
C	Line C
CL	Carriage Line
D	Line D
DB	Down Bletchley
DBL	Down Bromsgrove Loop
DFR	Down Feeder Relief (Reading)
DGL	Down Goods Line
DH	Down Airport (Heathrow Airport Jn to T2&3 and Down T5, Heathrow T2&3 to Heathrow T5 (both for Up direction working))  Down Holyhead (for reversible running)
DHR	Down Airport Relief (Stockley Jn 8210 points) to Heathrow Tunnel Jn (for Up direction working)
DJ	Down Jericho (Oxford)
DK	Down Kemble
DL	Down Line/Loop
DM or DML	Down Main
DNL	Down Newbury Loop
DOX	Down Oxford
DPL	Down Passenger Line/Loop
DRL	Down Relief Line

DT	Down Tunnel
DW	Down Westbury
DWL	Down Westbury Line
E	Line E
ECL	Engine & Carriage Line
FVL	Festival Line (Reading)
GL	Goods Line
ML	Main Line
RCL	Reception Line
RL	Relief Line
RL1	Reception Line 1
RL2	Reception Line 2
RVL	Reversible Line
TL	Through Line
UB	Up Bletchley
UDR	Up and Down Relief
UFM	Up Feeder Main (Reading)
UGL	Up Goods Line
UH	Up Airport (Up T5, Heathrow T5 to T2&3 and Up Airport Heathrow T2&3 to Heathrow Tunnel Jn (both for Down direction working)  Up Holyhead (for reversible working)
UK	Up Kemble
UL	Up Line
UM or UML	Up Main
UOX	Up Oxford
UPL	Up Passenger Loop/Line
UR	Up Reception
URL	Up Relief Line (including Up Airport Relief Heathrow Airport Jn to Stockley Jn 8211 points for Down direction working)
UT	Up Through/Tunnel
UWC	Up West Curve
WDL	West Drayton Loop
WL	Westbury Line

### 1.3.5 Activity and Other Codes

Abbreviation	Description
-D	Train stops to detach vehicles
-T	Train stops to attach and detach vehicles
-U	Train stops to attach vehicles
A	Train stops or shunts for other trains ahead or to pass only. Shows as an * in WTT
AE	Trains stops to attach/detach assisting locomotive.
BL	Train stops to attach or detach a banking locomotive
C	Train stops to change train crew
D	Train only stops to set down passengers. Shows as an s in NRT
E	Train stops for examination
G	NRT data to add
H	Notional Activity to prevent WTT column merge
HH	As H, were there is a third column involved
K	Passenger count point
KC	Ticket collection and examination point
KE	Ticket examination point
KF	Ticket examination point – 1 <sup>st</sup> Class only
KS	Selective ticket examination point
L	Train stops to change locomotives

N	Stop not advertised to the public
OP	Train stops for other operating reasons
OR	Train locomotive on rear of train
PR	Train propelling between points shown
R	Train stops when required. Shows as an x in NRT
RM	Trains stops for a reversing movement or driver to change ends
RR	Train stops to allow the locomotive to run-round its train
S	Trains for railway personnel only
T	Trains stops to pick up or set down passengers
TB	Train begins (Origin)
TF	Train finishes (Destination)
TS	Detail consist for TOPS Direct requested by DB Cargo
TW	Train stops to pick up or set down a staff, tablet or token on Single Lines. See Section 5.2
U	Train only stops to pick up passengers. Shows as a u in NRT
W	Train stops for watering of coaches
X	Train passes another train at crossing point on single line. See Section 5.2

Activity Codes – Notes	
1. Any passenger train that stops at a location automatically generates a T Activity unless it is suppressed.	
2. If an Activity is required that removes the 'passenger stop' Activity (T, D, U and R), then the 'passenger stop' Activity must always appear in the first Activity field (e.g. T –D would be correct, –D T would not). This is because the National Rail Timetable (NRT) extract program only considers the first Activity field. If it does not find a 'passenger stop' Activity in the first field the time will not be extracted to appear in the NRT.	
3. Up to 6 Activities may be shown for each event.	
4. No two Activities may be duplicated at the same event.	
At any one event, the following groups are mutually exclusive:	
a) D, U, T, N, S, TW, OP.	
b) –D, –U, –T.	
c) TB, TF.	
d) KC, KE.	
6. N, R, G, D and U are only valid with Train Categories XC, XD, XI, XX, XZ, OO, OW, OL, BS, BR and blank (i.e. 'advertised' services).	
7. K, KC, KE, KF, KS are only valid with Train Categories starting X or O.	
8. If TF is present then none of K, KC, KE, KF, KS can be present.	
9. Activity T indicates that a train stops to pick up and set down. This normally refers to passengers. Activity –T indicates that the train stops to attach and detach vehicles. At any location where a 'stop' time is shown, TPS or a similar system will assume a default Activity is required unless otherwise specified. These default Activities are as follows: T for trains with a Train Category starting in X or O, OP for trains with a Train Category starting in Z or E, and –T for all other trains (but see below). The default Activity will be generated when the upload file is created.	
10. If Activities U, D, N, R, OP, S, TW, –U or –D are specified then this overrides the defaults and only the specified Activities will be included in the upload file.	

## 2 Route Description

### 2.1 Planning Geography

Network Rail maintains the planning geography and issues it to Train Operators using the BPlan system. BPlan data is to be regarded as the master geography and it is the responsibility of Train Operators and nominated Network Rail users to ensure that data in their train planning systems reflects the master geography.

It is essential that all locations, times and full details such as platforms, running lines, activities, etc. comply fully with all of the following rules. Any Network Links used for buses only are to have running line defined as BUS. All data used by a specifier must be that supplied by Network Rail: use of estimated times added or amended locally will cause the trains concerned to fail validation.

In order to avoid the creation of unnecessary journey legs and associated point-to-point timings, all passing times must conform to these rules.

Locations in bold **type and underlined** are mandatory timing points i.e. apply to all trains on the specified line of route.

Locations in **bold** type are conditional timing points with a mandatory element. These are locations where all trains travelling on a specific line or in a specific direction are required to be timed at this location, which will be defined in the Notes column. For lines/directions for which the mandatory element does not apply they are to be treated as non-mandatory timing points and are only required to be shown in connection with a specific activity with one or more of the codes shown below in the Code column.

Locations in normal type are non-mandatory timing points and are required to be shown only for a specific activity with one or more of the codes shown below in the Code column.

Locations in *italic* type are not timing points but are shown for reference purposes.

Line references shown in italics e.g. *SW100* are only for reference purposes.

In the tables below, the following codes apply:

- F Only freight trains are timed here
- P Only passenger trains are timed here
- S Only stopping trains are timed here
- X Only trains crossing from one running line to another are timed here

## 2.2 Route Opening Hours

Subject to constraints imposed by the Engineering Access Statement all routes are open continuously, except as shown below. The hours shown reflect the contractual opening hours. The actual opening hours may vary from those shown. For a complete listing of current signal box opening hours please refer to the “Compendium of Signal Box Opening Hours” which can be found on the Network Rail website - <http://www.networkrail.co.uk/asp/3741.aspx> If there is doubt about a signal box’s opening hours check with the appropriate Network Rail Operations Manager.

When the routes shown are required for services diverted under the Engineering Access Statement opening hours will be increased as necessary on a temporary basis.

Signal boxes equipped to be switched-out during a route’s opening hours are shown within the routes concerned.

PLT denotes passage of last train.

<b>GW103 PADDINGTON TO UFFINGTON</b>
Note: Acton Canal Wharf Signal Box is closed between 07:00 and 19:00 hrs on Sundays. The following routes are not available during these periods: Trains linking with the West Coast Main line via EA1310, EA1360 and MD170 (via Acton Canal Wharf Junction cannot run during this period; Links to the Midland Mainline in both directions via EA1310 and EA1360 to and from both Brent Curve Junction and Cricklewood Junction are also unavailable at the same time).

<b>GW108 FORDGATE TO PENZANCE</b>

## 3 Electrification

### 3.1 Electrification Limits

Limits of the 25 kV AC and 750V DC electrification systems are contained in Table A of the Sectional Appendix to the Working Timetables, issued by, Network Rail. Refer to Table A for the given location to identify the type of electrification that applies.

### 3.2 Electrification Supply Restrictions

Under normal conditions, the electrification power supplies will not place any restrictions on the use of approved electric traction. However, the Route Clearance sections of the Sectional Appendix to the Working Timetables, issued by, Network Rail do tabulate restrictions on the movement of electric trains. Refer to Table A and select Route Clearance.

Under maintenance conditions, certain sections of the electrified network may be blocked to electric traction. These restrictions are contained within the Network Rail Engineering Access Statement for the appropriate year. Additional restrictions may also arise in connection with engineering possessions requested through the Engineering Access Statement amendment procedure.

## 4 Rolling Stock Restrictions

### 4.1 Locomotive Route Availability

See the applicable Route Clearance table for the given location in Sectional Appendix to the Working Timetables, issued by Network Rail. Refer to Table A, and select Route Clearance.

### 4.2 Passenger Stock Restrictions

See the applicable Route Clearance table for the given location in Sectional Appendix to the Working Timetables, issued by Network Rail. Refer to Table A, and select Route Clearance.

### 4.3 Freight Wagon Restrictions

See the applicable Route Clearance table for the given location in Sectional Appendix to the Working Timetables, issued by Network Rail. The Route Availability for a given location is in the 'Signalling and Remarks' column of Table A. Route Clearance Table D5 Route clearance of freight vehicles gives further guidance on freight wagon restrictions.

Trains conveying vehicles that have a heavy axle weight or other exceptional characteristics, or vehicles conveying containers or swap bodies require an RT3973 form.

*Note: The Rule Book GERT8000 Section TW4 of defines a container as an intermodal transport unit constructed to a standard (usually specified by the ISO) suitable for conveyance by road, rail or sea.*

*Note: The Sectional Appendix does not cover the CTRL HS1. The CTRL has its own Working Manual.*

### 4.4 Freight Train Load Limits

Trailing load limits for all traction types are contained in the Freight Loads Book published by Network Rail.

*Note: It is important to understand the weight limitations that apply to trains especially over sections of heavily graded routes. Coupling strength information is also contained in the a). Coupling strength is important in determining the trailing loads that trains can convey.*

### 4.5 Freight Train Length Limits

Refer to the Freight Train Loads Book published by Network Rail for the length limits of freight trains.

*Note: The Sectional Appendix quotes loop lengths in metres and feet. These are the absolute lengths of the loop from the signal at the outlet to the fouling point at the entrance to the loop.*

### 4.6 Engineers' Trains Restrictions

Some On Track Machines (OTMs) do not reliably activate track circuits. These OTMs must use one of the following special reporting numbers 6Z09, 7Z09 or 8Z09\*. Because these OTMs do not reliably activate track circuits it is not possible to apply the headways and junction margins as outlined in Timetable Planning Rules consistently and it is therefore not possible for Capacity Planning to provide timings for these movements.

\* Source GE/RT 8000-OTM

## 5 Running Times, Margins and Allowances

Except where otherwise stated, the information in this section of the Timetable Planning Rules reflects the general rules used in developing the 1994/5 timetable (Several exceptions to the general rules were agreed for 1994/5 and exceptions may continue to be possible with the specific agreement of Network Rail in every case.)

### 5.1 Sectional Running Times

The definition for Sectional Running Times (SRTs) is listed in Section 6.4 of the National TPRs.

#### 5.1.1 Source of Current SRTs

The definitive catalogue of SRTs is BPlan.

#### 5.1.2 Method of Calculation

SRTs are revised by Train Operators and Network Rail as part of the Revision of Timetable Planning Rules process outlined in Network Code Part D 2.2. Normally they will not change from one timetable to the next. Network Rail will, however, re-calculate SRTs for particular train/route combinations in the following circumstances:

- i) Where a Train Operator anticipates using a train/route combination for which no suitable SRTs exist;
- ii) Where Network Rail anticipates a change to route data, e.g. line speed changes;
- iii) Where there is evidence that the SRTs in current use do not adequately represent real train performance;
- iv) Where it is cost-effective to re-calculate all SRTs on a route at the same time as a re-calculation for a particular train type.

Network Rail will reflect the methodology and assumptions described in Section 6 of the National TPRs when calculating TPR proposals, unless and to the extent documented otherwise in respect of any given proposal. Timetable participants are encouraged to submit change proposals for review and consultation in line with the national methodology, or in line with such alternative methodology and assumptions as favoured by the proposer. NR will not seek to reject any proposal on the exclusive basis of the methodology employed, provided that the methodology and assumptions are clearly stated and demonstrably adhered to in respect of the proposal received.

SRT change proposals may be calculated in a number of ways including, but not limited to:

- a) Through actual timing of trains
- b) Use of On Train Monitoring Recorder (OTMR) systems
- c) Use of computer system actual values
- d) Use of computer simulation tools
- e) By any other agreed methodology

It is permissible to include percentage uplift in SRTs instead of applying engineering recovery allowances to be agreed by all affected parties.

In the event that the application of different methodologies produces conflicting proposals, a joint observation exercise should be undertaken to ascertain what happens in reality.

#### 5.1.3 New and Revised Sectional Running Times

New and revised SRTs are revised by Train Operators and Network Rail on an individual basis. These should be supplied by applying the methodology described in Section 6 of the National TPRs unless another methodology is deemed appropriate, provided that the methodology and assumptions are clearly stated and demonstrably adhered to in respect of the proposal received.

## 5.1.4 Timing of Trains Consisting of Passenger Vehicles on Goods Lines

The sectional running timings quoted for trains consisting of passenger vehicles on Goods Lines reflect the speeds shown in the relevant Table 'A' of the appropriate Sectional Appendix. They do not constitute an authority to time trains conveying passengers on a Goods Lines. Nor do they reflect the permitted speeds at which a train conveying passengers can proceed. Network Rail will offer the sectional running times for trains conveying passengers on a Goods Line on a train-by-train basis. For those times please apply to Capacity Planning.

Operations Publications publish the authority to allow the planned operation of trains conveying passengers on Goods Lines. Before Operations Publications can grant authority they require confirmation that the track is fit for purpose and that there is a safe method of operation. Therefore-Capacity Planning must apply to the relevant Track Engineer and Operations Manager for confirmation of these requirements in writing. Capacity Planning must pass these responses to Operations Publications. Capacity Planning is responsible for advising Operations Publications of the requirement to operate a passenger train on a Goods Line at least 8 weeks before the day of operation.

## 5.2 Headways

The definition for Headways is listed in Section 6.5 of the National TPRs.

### 5.2.1 Headway Values

All times are in minutes. All routes are shown.

Where track circuit block (TCB) signalling applies, the standard headways for each route are shown, together with any exceptions.

AB indicates locations where absolute block signalling applies: here the headway is to be calculated from the transit time of the first of each pair of trains running between the consecutive block posts being considered. To this transit time shall be added 2 minutes to allow for the signaller's actions. Exceptions are shown as AB and appear together with the actual headway value to be used, which includes the allowance for signallers' actions. Where there is an intermediate block signal, the absolute block section concerned shall be between this signal and the next block post in advance.

Single lines and other forms of signalling are shown, together with any values applicable, where they occur.

'OTNS' or 'OT' indicates One Train Working with No Train Staff; 'OTS' or 'OT(S)' indicates One Train Working with Train Staff. 'NST' indicates No Signaller token. In these cases only one train is allowed in the section at one time; a second train cannot be allowed to enter the section until the first train has left the section.

'ETB' indicates Electric Token Block, and 'TB' indicates Tokenless Block for single lines.

'RB' indicates Radio Signalling where 'Long Section Tokens' can be issued between certain block posts during times of low traffic volume.

Light Engine movements to be treated as passenger trains when applying margins/ allowances where there is a freight/ passenger difference.

<b>REDUCED HEADWAY FOR A TRAIN FOLLOWING FROM A STAND</b>			
Route Section	Margin		
First train speed passing the loop	50 – 55 mph	60 – 95 mph	100 – 125 mph
Headway			
<b>2</b>	1.5	1.5	1.0
<b>3</b>	2.5	2.0	1.5
<b>4</b>	3.0	2.5	2.0
<b>5</b>	4.0	3.0	2.5
<b>6</b>	4.5	4.0	3.0
<b>7</b>	5.5	4.5	3.5
<b>8</b>	6.0	5.0	4.0
<b>9</b>	7.0	5.5	4.5
<b>10</b>	7.5	6.0	5.0
Note this does not apply in absolute block areas.			
Note the normal headway applies at the next mandatory timing point.			
Note this shall not apply where the preceding train has an intermediate calling point before the next mandatory timing point.

## 5.2.2 General Capacity Constraints

Where single line working is to operate or trains are to be routed to run on a line other than that normally planned for them, constraints on capacity will apply – see Engineering Access Statement.

The following special capacity and timing restrictions apply in addition to the constraints stated elsewhere in this document:

Network Rail intends to restrict planned usage to 90% of capacity, according to the following criteria:

- (a) Headways used are strict minimum headways.
- (b) Period of time measured is a minimum of half an hour.
- (c) Capacity is measured over a signal block section, through a junction, through a platform or on a single line section.

### **EXCEPTIONS :-**

- ( i ) Where usage already exceeds 90% capacity, businesses will be permitted to retain existing paths but will be encouraged to move trains away from the critical period where there are acceptable cost/customer considerations. If a business relinquishes a path in the critical period, other businesses would not be able to re- occupy the path (see ii).
- ( ii ) If a business wishes to run an additional train/s in the critical period, that request will be tabled for discussion. Normally, additional trains that breach the 90% level will not be accepted, but in exceptional circumstances it may be agreed provided all parties acknowledge the performance risks.

These restrictions will apply on the following route sections :-

<b>GW103 PADDINGTON TO UFFINGTON</b>
--------------------------------------

Between Paddington and Reading in both directions.
--

<b>GW105 UFFINGTON TO FORDGATE VIA BOX</b>
--

Between Bathampton Jn and Bristol Temple Meads in both directions.
--

<b>GW900 PILNING TO FISHGUARD HARBOUR</b>
---

Between Pilning and Severn Tunnel Junction.
---

<b>NW3001 SALTNEY JUNCTION TO HOLYHEAD</b>
--

Steam Hauled services must be timed over Conwy Tubular Bridge 30 minutes prior to a booked service to allow a full inspection of the structure to take place prior to the passage of the next booked service.
---

## 5.3 Junction Margins and Station Planning Rules

The definition for Junction Margins and Station Planning Rules is listed in Section 6.6 - 6.10 of the National TPRs.

All times shown are in minutes. Where adjustments to sectional running times are shown, the value must be added to the normal SRTs shown in B Plan. Negative adjustments are specially identified.

Minimum station allowances are the minimum practical for the particular type of stock. These are shown with exceptions being listed by line of route where applicable.

Light Engine movements to be treated as passenger trains when applying margins/ allowances where there is a freight/ passenger difference.

<b>STANDARD VALUES – MINIMUM</b>	
<b>Adjustment to Sectional Running Times</b>	
A ½ minute adjustment should be included in all trains* approaching the termination point, where otherwise the terminating time would include an odd half-minute.	
*except at London Paddington to allow trains to run at 2½ minute headways if required, and except at Twyford and Henley (for self-contained Henley Branch services ONLY), to enable a half-hourly service frequency.	
<b>Brake Testing</b>	
Great Western Railway 80X services require a {½}-minute running brake test allowance to be included in each schedule timed using 802-E or 802-D timing loads, at the first practical opportunity that a running speed of 40mph or higher is achievable, or prior to the first stop (whichever occurs first.) This is a mandatory allowance, to apply at the start of each journey, after any driver change, change to train formation or any reversal en-route. It is not to be applied during local shunt moves or ECS moves on/off depots. Where doubt exists, please request advice from the Train Operator	
<b>Entering an occupied Platform</b>

<b>Locomotive Run Round – GW routes</b>														
Passenger					10									
Freight					20									
<b>Locomotive Run Round – NW routes</b>														
Passenger					15									
Freight					20									
<b>CrossCountry HST / 22x Train Preparation Allowances – minimum platform standing allowance between ecs arrival from depot and passenger train departure</b>														

<b>STANDARD VALUES – MINIMUM</b>						
1 x 22x	15					
2 x 22x / HST	20					
By exception, allowances for 'Train Preparation' (above) and 'Safety Check Unit' (below) may be reduced after discussion and agreement between CrossCountry and Network Rail						
<b>CrossCountry 22x Safety Check Unit (SCU) Allowances – minimum platform standing allowance between passenger train arrival and ecs departure to depot</b>						
1 x 22x departing in same direction as arrival	8					
1 x 22x departing in reverse direction to arrival	10					
2 x 22x departing in same direction as arrival	15					
2 x 22x departing in reverse direction to arrival	20					
<b>Pathing Rule – GW routes</b>						
Where pathing time of more than 2 minutes is unavoidably imposed between stopping points due to conflict at a junction a restart allowance must be inserted in the timing section after the conflict point as shown in the table below.						
Note:- Pathing time must not be applied approaching ARS controlled junctions where a restart allowance would be incurred as it will be ignored by ARS. This causes the route to be set too early creating delay to any preceding train planned ahead on minimum junction margin. Any pathing required should be inserted at the preceding dwell point.						
<b>Restart allowance in minutes</b>						
Line Speed	< 80 mph	80 mph	90 mph	100 mph	110 mph	125 mph
Pathing time \$						
< 2	0	0	0	0	0	0
2	0	0	0	0	0	1
2 ½	0	0	0	½	1	2
3	0	0	½	½	1½	2
3 ½	0	½	1½	1½	2½	3
≥4	½	1	2	2	3	3½
\$ Aggregated pathing time including engineering box time and any other allowances after the last stopping point						

<b>Pathing Rule (Freight) – GW routes</b>	
Where pathing time of <b>more than 2 minutes</b> is inserted into freight trains between stopping points, the freight train must be deemed to have stopped at the next timing point and must be re-started using a start to (stop / pass) SRT, from the point of conflict.	
<b>Platform End Conflicts</b>	Trains may arrive 1 minute before or 3 minutes after a departure Except for Westbury, Exeter St David's and Plymouth where 2 before or 3 after applies.
<b>Platform Re-occupation – NW routes</b>	
Following EMU/DMU in same direction	3
Following EMU/DMU in opposite direction	5

<b>Train Crew Change Allowance</b>	
	2 (NW routes)
<b>Turnround Allowances in General – GW routes</b>	
At each stage of timetable development, turnrounds will not be planned for a shorter time than the minimum times shown here unless agreed by the Network Rail Operational Planning Project Manager and appropriate Business Manager.	
Where an Operator wishes to specify a turnround at a location where no minimum is specified in this document, this shall be subject to the agreement of the Route Operational Planning Manager and appropriate Business Manager	
<b>Turnround Allowances</b>	
MTR Crossrail services	7
<b>Turnround Allowances On Branch Lines – GW routes</b>	
The turnround margins at either end of the branches listed below must be a minimum of 3 minutes. In the branch working however there must be no more than <u>three</u> consecutive <u>3-minute</u> turnrounds.	
<ul style="list-style-type: none"> <li>Falmouth Branch</li> </ul>	

- Gunnislake Branch
- Looe Branch
- Severn Beach Branch
- St. Ives Branch
- Maesteg Branch

**STANDARD VALUES – MINIMUM****Turnround – NW routes**

<b>Minimum Turnround</b>	10
LH/HST	15 For new services, a turnround time of 10 minutes per hour of journey time should be taken as a guide.
MU	4 But no more than 3 successive 4 minutes turnrounds followed by an additional 10 minutes.(10 minutes applies to diagrams and not stations) For new services, a turnround time of 10 minutes per hour of journey time should be taken as a guide.
Avanti West Coast Services	60 At Holyhead (for Class 390) 30 At Holyhead (other than class 390) 20 At all locations for train entering passenger service after an ECS move or an ECS move following a train leaving passenger service.

**THE FOLLOWING PAGES SHOW-THE EXCEPTIONS TO THESE STANDARD VALUES****GW103 PADDINGTON TO UFFINGTON****Paddington**

<b>Connectional Allowance</b>	15
-------------------------------	----

**Adjustment to Sectional Running Time** (to be shown on the approach to Paddington)

<b>Movement</b>	<b>Reason</b>	<b>Timing Load</b>	<b>Value</b>
Trains that are planned to enter a platform that is already occupied		All traffic	+ {1}

**Pathing approaching Paddington**

Pathing time must not be applied approaching Paddington, when providing a margin with a conflicting departure. ARS will not read the pathing time, and a conflict will be created. Pathing time should be inserted approaching Royal Oak Jn to achieve such a margin.

**Platform End Conflict Margins**

<b>First Movement</b>	<b>Second Movement</b>	<b>Margin</b>
Arrival	Conflicting Departure	1
Departure	Conflicting Arrival	4 – giving a margin of 2 minutes at Royal Oak Jn

**Paddington Terminal Allowances: -**

<b>Inbound train (In passenger service)</b>	<b>Margin before departure to Depot</b>
80x (9/10 car)	10 minutes
80X (5 car)	7 minutes
L/H	15 minutes
DMU	5 minutes
EMU	5 minutes #
# 7 minutes for an 8 or 9 car EMU unless a replacement driver is provided.	

<b>Inbound train Depot</b>	<b>Margin before departure from Paddington (in passenger service)</b>
----------------------------	---

80x (9/10 car)	15 minutes \$
80x (5 car)	10 minutes
L/H	15 minutes
DMU	10 minutes
EMU	5 minutes #
# 7 minutes for an 8 or 9 car EMU unless a replacement driver is provided.	
\$ Can be reduced to 10 minutes on agreement with GWR	

The above minimum times are acceptable to Network Rail; individual Train Operating Companies may require longer periods to achieve commercial objectives, subject to a maximum of 45 minutes at peak times & 60 minutes at off peak times. These maximum times may not be exceeded unless agreed to in writing by the Network Rail Operational Planning Project Manager.

Peak times at Paddington are defined as 07.30 to 11.00 and 16.00 to 19.30 Mondays to Fridays.

Note: These maximum times do not apply to Sleeper services to & from Penzance.

Platform 12		3 cars		
Platform 14		3 cars		

### Station Working Rules

All Platforms: Trains reversing in Paddington Station must have different T.I.D.s for the inward & outward movements to or from the station. Note: A.R.S. (Automatic Route Setting) will not route trains attempting to reverse in Paddington using the same T.I.D.

Platforms 6 and 7 are intended primarily for use by Heathrow Express Class 332 EMUs and the use of these platforms by other stock is restricted to rights under Access Agreements.

Platforms 4 and 5: A 10 Car IET cannot detach in platforms 4 and 5 at Paddington as there is a high SPAD risk to the country-end set.

Platform 6: A 10 Car IET cannot attach or detach in Platform 6 at Paddington due to the platform length.

Planning note: Please note 332s are prohibited from using platforms 4 and 5 with deflated suspension. And prohibited from using platforms 8 and 14 at all times.

### Royal Oak Sidings, Paddington

ARS assumes Siding 1 for up trains if vacant

Stabling of trains at Royal Oak has not been practiced for several years, due to environmental complaints from the local authority. In view of the sensitivity of the noise pollution issue, the planned use of Royal Oak for stabling of trains is considered most undesirable. Any Train Operator considering such use **must**, therefore, consult with Network Rail before submitting a bid. Royal Oak Sidings are available in an emergency, subject to driver compliance with noise abatement, as detailed in the Sectional Appendix. This does not apply to electric trains. Bi mode trains must be AC mode only.

### Royal Oak Junction

A margin of 2 minutes applies to conflicting moves

### Westbourne Park GBRf

One train only

### Ladbroke Grove

**Junction Margin** (*applies for moves to and from the Carriage Lines via 8096 and or 8097 points*)

First Movement	Second Movement	Margin
Up train passing Ladbroke Grove	Down train to Carriage Lines	2
Down train towards Old Oak Common	Up train passing Ladbroke Grove	3

Up train passing Ladbroke Grove	Up train from Carriage Lines	2	
<b>Adjustments to Sectional Running Times (allowance to be shown approaching this location)</b>			
<b>Movement</b>	<b>Reason</b>	<b>Timing Load</b>	<b>Value</b>
Crossing from ML to RL at Acton West in the Up direction Pass to Pass	Slower crossing speed	HST and HST (2+7) / 180 / 220/1 / 142 – 165/6 / 332	+{½}
Crossing from ML to RL at Acton West in the Up direction Pass to Pass	Margin applied during two track timetable operation for Great Western Railway only	HST / 180	+{½}

**Old Oak Common Crossrail Depot****Depot Back Line**

Owing to the signalling restrictions on this section of the infrastructure, trains are not permitted to be timetabled over the depot back line unless access during pre-planned engineering possession is required and no other route into the depot is available.

**North Pole IEP Depot****Depot Acceptance**

Trains arriving at this location must be timed 10 minutes apart. - Use of adjustment allowances between North Pole and Ladbroke Grove (either direction) is permitted for the purpose of maintaining 10-min depot intervals and optimising pathing at Ladbroke Grove, provided no schedule conflicts are created

Trains departing this location must be timed 10 minutes apart.

**Acton Main Line****Dwell Time**

MTR Services	½
--------------	---

NB: trains from Acton Wells Jn to the Down Goods that are booked to change traincrew at Acton Main Line stop adjacent to SN182 signal on the Down Goods. It is not possible to route a second down train from Acton Wells Jn towards the Down Goods or Down Relief or Acton TC until the first train has drawn forward to SN197 signal at Acton West.

<b>Acton West</b>		
<b>Junction Margin</b>		
<b>First Movement</b>	<b>Second Movement</b>	<b>Margin</b>
Train passes Acton West Junction in the down direction	Train departing Acton Yard or Goods Lines in the down direction onto the relief lines	1 minute at Acton Yard/Goods Lines

<b>come to a stop</b>
<del>Trains approaching Hayes and Harlington on the Up Relief Line cannot enter the platform if a Down train has already been signalled along the Up Relief Line to the Bay platform from the Southall West Junction direction.</del>
<b>Planning Note</b>
* Hayes Tarmac Sidings can accommodate only one train at a time.
<b>Freight Restrictions</b>
<del>Down trains from the Acton direction are required to run round in either Langley or Slough Up Goods Loop. They are then routed via the Up Goods Line from Iver to West Drayton. They then have to propel in from West Drayton. Trains for West Drayton TC are subject to a maximum length of 63 SLU on the Up Goods line at West Drayton. Trains may be 'top and tailed' and enter via West Drayton East Jn from the Acton direction, length subject to not blocking Iver Up Goods Loop.</del>

### Heathrow Airport Junction

#### Adjustment to Sectional Running Time (allowance to be shown approaching this location)

Movement	Reason	Timing Load	Value
A down train from Southall towards Heathrow Airport (Down Main only)	Not crossing Heathrow Airport Jn at linespeed	387/110	+{1/2}

These adjustments are not required:

- On the relief lines in either direction
- When running bi-directionally at Hayes & Harlington, or,
- When using 387/90 or 387/100 timing loads

#### Signalling Limitations

It is not possible to add pathing time to trains timed at Hayes and Harlington between Heathrow Airport Jn and Hayes and Harlington (both directions) as there are no intermediate signals.

Where the leading train calls at Hayes and Harlington the margin applies on departure of the leading train from Hayes and Harlington.

Where trains from the Slough direction require pathing time to maintain headway (or other allowances) at Heathrow Airport Junction, this should be added approaching Stockley Junction.

### Stockley Junction

#### Adjustment to Sectional Running Time (allowance to be shown approaching this location)

Movement	Reason	Timing Load	Value
Up trains crossing from Up Relief to Up Main.	Acceleration	All	+{1/2} after jn

### West Drayton ARC

#### Freight Restrictions

Down trains from the Acton direction are required to run round in either Langley or Slough Up Goods Loop. They are then required to propel into the terminal from Dawley Up Goods Loop.

### West Drayton

<b>Dwell Time</b>

**Signalled Moves**

It is not possible for a train to reach Platform 5 from the Down Main or Down Relief Line, via Maidenhead East Junction, when platform 5 is already occupied.

Class 16X services arriving into Platform 5 from the east, should be no more than **5** vehicles in length. *This is due to the presence of an intermediate Stop-Car Marker, which ensures that services from Marlow can be routed permissively into Platform 5, even when the London end of the platform is occupied.*

Movements from Platform 5, shunting to another platform, cannot be routed via Maidenhead East, and should be timed via the stabling lines.

**Twyford****Adjustment to Sectional Running Time (shown approaching this location)**

<b>Dwell Time</b>			
80X, HST / LH, 220 & 221	3 <sup>§</sup>		
142 to 170 & GWR Short Form HST (HSTGW4)	2 <sup>#</sup>		
<sup>§</sup> Increase to 10 minutes if watering is required. <sup>#</sup> Increase to 4 minutes if services reverse at Bristol Temple Meads.			
<b>Minimum allowance for reversals or run rounds en-route</b>			
L/H	15		
<b>Platform Re-occupation</b>			
Same direction	3		
Opposite direction	Apply junction margin at Bristol East/West		
<b>Attachment</b>			
Class 80x	8 (Including dwell)		
<b>Margin between arrivals on adjacent platforms</b>	3 <sup>^</sup>		
<sup>^</sup> The simultaneous routing of trains to opposing mid-platform signals on the same through platform line is <b>prohibited</b> . The first train must have arrived and be <b>stopped</b> before a second train is allowed to approach from the gantry signal at the opposite end of the station.			

<b>Bristol Temple Meads</b>							
<b>Turnround allowances</b>							
	HST	L/H	220 & 221	DMU	GWR Short Form HST (HSTGW 4)	80X (5 car)	80X (9/10 Car)
From Paddington/Birmingham		30	20	20 <sup>‡</sup>	20 <sup>‡</sup>	15	17
From Bicester Town/Oxford				15	15		
North of Birmingham	30	30	20	30	30		
Plymouth/Salisbury/Swansea		30		20	20	15	20
Bristol Parkway/Bath Spa/Severn Beach				5	6		
Cardiff Central/Gloucester/Swindon/Taunton/Westbury/Weston-s-Mare/Weymouth/Worcester		20		10	10	10	10
<sup>‡</sup> - May be reduced down to 17 minutes to permit the correct pathing of services, however no consecutive reductions can be made and under no circumstances should this allowance be reduced to less than 17 minutes.							
<b>Normal platform usage or guidance (shown by arrival)</b>							
Wherever possible, through trains should be timed into the far platform, and reversing trains should be timed into the near platform. The exception to this principle is through trains arriving in the down direction into Platforms 3/4, which should be timed into Platform 3 to avoid passengers having to walk back to the gates from Platform 4.							
When units are required to attach, involving a movement past a Platform Sharing Signal to the far platform, a minimum station dwell of 5 minutes must be applied to the second train. This incorporates the track section occupancy of 2 minutes required by the interlocking, for the Platform Sharing Signal (position light) to clear, and an attaching allowance of 3 minutes.							
Prior to submitting a bid Train Operators are requested to discuss with their Network Rail Business Manager any service (i) with a proposed platform occupation time of longer than 15 minutes beyond the specified minimum Turnround allowance time and/or (ii) which requires attaching and/or detaching of locomotive(s).							
<b>In/Out Siding.</b>							
It is not possible to arrive or depart from the In/Out Siding when a train is standing in or routed through Platform 15.							

<b>Bristol West Junction</b>	
<b>Junction Margins</b>	
Time needed between all conflicting moves	2½ (If first move is a passenger service/ECS/Light loco) 2½ (If first move is a freight up to 50 SLUs) 3 (If first train is a freight up to 80 SLUs) 3½ (If first train is a freight up to 103 SLUs)
A maximum of 3 trains may be held at Bristol West Junction as follows:- Train A on the West Carriage Line at Signal BL6728 Train B on the West Carriage Washing Siding at Signal BL6730 Train C on the West Carriage Line at Signal BL6734	

A minimum of 25 minutes is required to run round a loco hauled train at Bristol West Junction.

Only trains which may be walked through should reverse here (Except where two drivers are provided). Trains which cannot be walked through are to reverse at Bedminster.

<b>Malvern Wells</b>
<b>Capacity Constraints</b>
i) If there is an Up train in the section between Ledbury and Malvern Wells a Down train cannot arrive at/or pass Malvern Wells until 2 minutes after the Up train has passed Malvern Wells;
ii) ECS movements from the direction of Great Malvern, that are to reverse at Malvern Wells, should arrive no later than 2 minutes before the <u>arrival</u> of an Up train at <u>Ledbury</u> ;
iii) An ECS movement reversing at Malvern Wells can depart from Malvern Wells towards Newlands East L.C. Signal Box with an Up train in the section between Ledbury and Malvern Wells;
iv) ECS movements towards Great Malvern, that have reversed at Malvern Wells must not arrive Great Malvern until 3 mins after the previous train has passed Newlands East Signal Box. It is permitted to place pathing time between Malvern Wells and Great Malvern; MW5 signal protects the AB section. This principle can also be applied to an Up train from Ledbury following a preceding train towards Newlands East, provided the second train has {1} inserted approaching Malvern Wells for Restrictive signalling aspects.
v) A 9/10 car class 80x formation booked to reverse at Malvern Wells MUST do so via the single line section and therefore requires the section to Ledbury to be CLEAR and is subject to note ii).

<b>Colwall</b>	
<b>Dwell Time</b>	
150 to 172	1

<b>Ledbury</b>			
<b>Capacity Constraints</b>			
When it is necessary for two trains to cross at Ledbury they should arrive a minimum of 3 minutes apart. If this is not possible then see below for 'Adjustments'

<b>GW450 STOKE GIFFORD JUNCTION TO BRISTOL EAST JUNCTION</b>				
<b>Filton Abbey Wood</b>				
<b>Junction margins</b>				
<b>First Movement</b>		<b>Second Movement</b>		<b>Margin</b>
Train passes or arrives platform 1 from Bristol Parkway		Train departs platform 2 towards Bristol Parkway using DF		Simultaneous
Train passes or arrives Platform 1 from Bristol Parkway		Train passes Platform 2 towards Bristol Parkway using DF		1 minute
<b>Rules regarding position of signals (On ML BL1580. On RL BL1578)</b>				
A train cannot cross from down Bristol line to platform 1 in the down direction (down Filton main) whilst there is a train standing in platform 2 (up Filton main).				
A train cannot cross from Filton chord line to platform 1 in the down direction (down Filton main) whilst there is a train standing in platform 2 or platform 4 and cannot cross to platform 3 whilst there is a train in platform 4.				
A train cannot enter platform 3 from down Bristol line in the down direction (down Filton relief) whilst there is a train standing in platform 2 (up Filton main) which is running towards patchway or Filton chord.				
Only one train routing towards Patchway/Filton chord may call at Filton Abbey wood at any one time.				
All trains longer than platform length crossing from Patchway direction and stopping in platform 1 will block Filton Jn No.1 points preventing a second train going from platform 2 towards Bristol Parkway				
A down train terminating in platform 2 cannot turnback. Can only turnback in platform 1.				
<b>Dwell Time</b>				
<del>142 to 159/16x/GWR Short Form HST (HSTGW4)/80x</del>		1*

<b>Lawrence Hill</b>			
<b>Adjustments to Sectional Running Times (allowance to be shown approaching this location)</b>			
<b>Movement</b>	<b>Reason</b>	<b>Timing Load</b>	<b>Value</b>
From North Somerset Junction to Lawrence Hill Pass to Stop	Slow speed junction	HST/22x D245 to D455	{1}
<b>Dwell Time</b>			
142 to 150	½		
153 to 170 / GWR Short Form HST (HSTGW4)	1		
<b>Planning note</b>			
Down trains calling at Lawrence Hill which are booked to weave to ML or Rhubarb Loop at Dr Days Jn should be planned with minimum dwell only due to signal overlap locking the junction.			
Down trains calling at Lawrence Hill should never be planned to weave RL-DF (UBL-DBL) at Dr Days Jn unless absolutely necessary. If it has to be planned, the junction must be clear (and set for the weave) 2 minutes prior to the train's arrival at Lawrence Hill, with standard junction margin applying after the weave. Alternative is for the train to have a minimum dwell of 2 minutes in the platform at Lawrence Hill to allow the overlap to clear and junction reset between arrival and departure.			

<b>Dr.Days Junction</b>			
<b>Adjustments to Sectional Running Times (allowance to be shown approaching this location)</b>			
<b>Movement</b>	<b>Reason</b>	<b>Timing Load</b>	<b>Value</b>
All trains on the Down Filton Relief at Narrowways Hill Jn crossing to the Down Filton Main at Dr Days Jn	Slow speed junction and approach control	DMU / GWR Short Form HST (HSTGW4)	{½}

Any trains not stopping at Lawrence Hill routed towards North Somerset Jn via 'Rhubarb Curve'	Slow speed junction and approach control	HST/22x/DMU/80x/GWR Short Form HST (HSTGW4)  D245 to D455 / Freight	{½}  {1}
From Narrowways Hill Jn to Filton Abbey Wood Pass to Pass (having come from North Somerset Jn)	Acceleration from slower speed route	Freight between 1200T and 1599T	{½}
		Freight between 1800T and 2000T	{1}
		Freight between 2200T and 2400T	{1½}
<b>Adjustments to Sectional Running Times (allowance to be shown after this location)</b>			
Freight trains passing from the "Rhubarb Curve" and running RL (Pass to Pass) towards Filton Abbey Wood		Up to 400t	{½} Approaching Narrowways Hill Jn
		600t to 1199t inclusive	{1} approaching Narrowways Hill Jn
		1200t to 1799t inclusive	{1} approaching Narrowways Hill Jn & {½} approaching Horfield Jn
		1800t to 2199t inclusive	{1½} Approaching Narrowways Hill Jn & {1} approaching Horfield Jn
		2200t and above	{1½} approaching Narrowways Hill Jn & {½} Approaching Horfield Jn
Freight trains passing from the "Rhubarb Curve" and running ML (pass to Pass) towards Filton Abbey Wood		Up to 400t	{½} approaching Horfield Jn
		600t to 1199t inclusive	{1} approaching Horfield Jn
		1200t to 1799t inclusive	{1½} approaching Horfield Jn

		1800t to 1999t inclusive	{2} approaching Horfield Jn
		2000t to 2199t inclusive	{2½} approaching Horfield Jn
		2200t and above	{2}* approaching Horfield Jn

\*Less adjustment required. Increased SRTs takes into account the slower overall speed and therefore less adjustment is required.

#### Adjustments to Sectional Running Times (allowance to be shown approaching Horfield Jn. ML moves)

From Dr Days Jn to Filton Abbey Wood on ML pass to pass (having come from North Somerset Jn)	Slow speed junction	22X 142 to 170 HST / Castle GWR Short Form HST (HSTGW4) / 80x	{1}  {1½}
--	---------------------	---	-----------------

#### Adjustments to Sectional Running Times (allowance to be shown approaching Narrowways Hill Jn. RL moves)

From Dr Days Jn to Narrowways Hill Jn on RL Pass to Pass towards Filton Abbey Wood (having come from North Somerset Jn).	Slow speed junction	HST 22X 142 to 170 / Castle GWR Short Form HST (HSTGW4) / 80x	{1½}
		Freight up to 400T	{½}
		Freight between 600T and 1800T	{1}
		Freight above 1801T	{1½}

#### Planning Restriction

There is no route from Down Filton Main to St Philips Marsh via the Rhubarb Curve. The available routing is from Down Filton Relief via UBL to North Somerset Jn.

#### GW4501 STOKE GIFFORD JUNCTION TO BRISTOL BULK HANDLING TERMINAL

Trains from Filton West Jn must not have pathing time or stops added approaching Patchway, this should be added approaching Filton West Jn instead. Signal BL1834 (approaching Filton West Jn) cannot be cleared until BL2046 (protecting Patchway Junction) is cleared, this is due to the risk of trains rolling back over 'Filton Tip AOCL'.

Refer to GW700 for margins at this location

**GW500 READING TO COGLOAD JUNCTION VIA WESTBURY AND FROME AVOIDING LINES (BERKS. AND HANTS)****Reading****Adjustments to Sectional Running Times (allowance to be shown approaching this location)**

Movement	Reason	Timing Load	Value
Trains booked to call at Reading West in the Up Direction (towards Reading Station). (Does not apply to trains routed to Reading platforms 1, 2 and 3).	Because of the mandatory timing point at Oxford Road Jn, it is not possible to calculate a Start to Pass SRT less than 30 secs between Reading West Stn and Oxford Road Jn.  This is then further complicated by	150, 16x, 220, 221, 387, 319, 769, 80x	{-½}

**GW500 READING TO COGLOAD JUNCTION VIA WESTBURY AND FROME  
AVOIDING LINES (BERKS. AND HANTS)****Reading**

	system issues not allowing a departure time at Reading West and a passing time at Oxford Road Jn to be the same. Therefore the adjustment allowance must be added between Oxford Road Jn and Reading Station.		
--	---	--	--

**Oxford Road Jn****Adjustments to Sectional Running Times (allowance to be shown approaching this location)**

Movement	Reason	Timing Load	Value
Trains booked to call at Reading West in the Down Direction (from Reading Station)	Because of the mandatory timing point here, it is not possible to calculate a Pass to Stop SRT less than 30 secs between Reading West Stn and Oxford Road Jn.  This is then further complicated by system issues not allowing an arrival time at Reading West and a passing time at Oxford Road Jn to be the same. Therefore the adjustment allowance must be added between Reading Station and Oxford Road Jn.	150, 16x, 220, 221, 387, 319, 769, 80x	{-1/2}

**Crossing and conflicting moves**

First Movement	Second Movement	Margin

**Reading West****Junction Margins**

First Movement	Second Movement	Margin
Train from Down Feeder Relief and Up Feeder Main.	Departure from Reading West	2½

**Dwell Times**

1

**Adjustments to Sectional Running Times (allowance to be shown approaching this location)**

Movement	Reason	Timing Load	Value
----------	--------	-------------	-------

Trains from Reading West Curve that are calling at Reading West Station.	Because of the new Mandatory Timing Point at Oxford Road Jn SRT's between Oxford Road Jn and Southcote Jn have been calculated based on trains operating to/from the route via Reading Station and therefore some differences for certain Timing Loads are required to take into account slowing to go to/from Reading West Curve.	220, 221	{1}
--	--	----------	-----

**Connectional Allowance**

3

**Signalling Limitations**

It is not possible to add pathing time between Reading West and Oxford Road Jn because the protecting signal for Oxford Road Jn is at the east platform end at Reading West. Increased dwell time should be added at Reading West where it would otherwise be necessary to add pathing time.

It is not possible to add pathing time between Oxford Road Jn and Reading West because there are no intermediate signals. Additional Pathing time should be added approaching Oxford Road Jn instead.

**Southcote Junction****Adjustments to Sectional Running Times (allowance to be shown after this location)**

* : May be reduced to 5 minutes if train has extended dwell at Exeter St Davids.			

**GW610 CRANNAFORD L.C. (INCL.) TO EXETER ST. DAVID'S****Pinhoe****Planning note**

A passenger service or ECS move that is required to depart Pinhoe Plt 1 in the Up direction prevents a train in the down direction from being signalled beyond **Honiton Feniton** station (SE4802 or SE4800 signal)

Therefore, any Down direction trains must be planned to depart Honiton only after an Up train has either completed a shunt move into Plt 2 at Pinhoe, or has passed clear of the single line section and has arrived at Honiton station.

From North of Bristol (including South Wales)	30‡	40	20	20	20 <sup>^</sup>	20 <sup>^</sup>
From Barnstaple/Plymouth				10		

<sup>^</sup> Plus 5 minutes if a shunt move is required

\* : Where trains are using the Up platform in the opposite direction, the minimum platform re-occupation time is 4 minutes.

‡ Can be reduced to 25 minutes if the train does not go via Goodrington Sidings.

The time allowed for a train to arrive at Paignton and then depart for Goodrington C.H.S. should be 9 minutes. This allows for detraining of customers; closing doors; contacting the signaller and traincrew lowering the barriers at Paignton South T.M.O. except when an attendant is on duty at Paignton South. In addition, the person in charge of the Yard must be contacted for permissions to allow access to the single line/yard. This will apply to all train types.

In addition, once a movement has been accepted from Goodrington C.H.S. and Signal PN12 cleared for the same, No route can be set from Signal PN3 on the Down Line (from Torquay) for arrivals into the station - a minimum of 3 minutes should elapse. Likewise, once Signal PN3 has been cleared for an arrival at Paignton from the Torquay direction no route can be set for an arrival from Goodrington C.H.S. Once that move is stationary a route from Goodrington C.H.S. can be set. It should be noted that Down trains can be routed either into DPL or UPL at Paignton. However, depending on the turnround allowances and occupation of the UPL it is desirable they be timed into the UPL.

Alternatively, a unit may run from the DPL into the UPL via Paignton Signal 3. This move should coincide with a train departing from Paignton (towards Torquay) to minimise the occupation of Paignton North crossing. All locomotives - hauled services are required to run to Goodrington CHS for run round purposes.

When more than one movement is to take place to and from (or within) Goodrington Carriage Sidings the sidings and line to Paignton are under the control of a "Person in Charge" in the event of more than one train being timed into Goodrington the Area Production Manager must be informed for staffing purposes.

Trains are to be timed as a single move Paignton - Goodrington - Paignton with the TID of the next working with the exception of DB Cargo; where each movement will be timed as separate trains, each with the appropriate TID relating to the incoming or outgoing passenger train.

**Paignton**Paignton South Level Crossing Attendant

A level crossing attendant is provided at Paignton South on Period EFG Saturdays between the hours of 0900-1800. During these periods, the time required to unload/secure terminating down trains in Paignton platform 1 prior to running ECS to Goodrington Sidings can be reduced to standard values. In these circumstances the 9-min allowance (shown above) does not apply.

**GW628 LAIRA JUNCTION TO CATTEWATER VIA SPEEDWAY JUNCTION****Laira Depot**

Trains from Plymouth to Laira Depot run under normal headway between Plymouth and Lipson Junction/Laira Junction see below for allowances around Mount Gould Junction.

Trains from Laira Depot must leave at a minimum of 15 minutes intervals.

**Laira Junction****Routes to and from this location to Laira Depot****Inbound**

Empty HSTs, 220s/221s, 80x, GWR Short Form HST (HSTGW4), DMU formations or Loco Hauled Passenger Vehicles from Plymouth to Laira Depot are normally routed via Mount Gould Junction then via the Washing Apron to Laira Depot.

Empty HSTs, 220s/221s, 80x, GWR Short Form HST (HSTGW4), DMU formations to Laira Depot may reverse at Mount Gould Junction without flushing or washing to avoid congestion and will perform these operations on the outward journey see the allowances for Mount Gould Junction. Such working must be agreed by the TOC with the Depot Manager at Laira.

Empty trains may only be routed via Laira Junction where it is possible for the driver to walk through the train as there is no walking route.

Loco hauled NPCCS vehicles are normally routed via Mount Gould Junction to reverse.

Light Diesel locomotives between Plymouth station and Laira Depot will normally be routed via Laira Junction.

**Outbound**

Empty HSTs, 80x & GWR Short Form HST (HSTGW4) departing from Laira Depot to Plymouth station will normally be routed via Mount Gould Junction where they will reverse. However, it is possible to route them via Laira Junction DGL to correct the orientation of the train.

Empty 220s/221s single sets will normally be routed via Laira Junction.

Empty loco hauled trains departing from Laira depot will normally be routed via Mount Gould Junction.

Empty trains where it is not possible to walk through the train may only be routed via Laira Jn if reversing on the Down Goods line. Empty trains where it is possible to walk through the train may reverse on either the Down Goods line or Main line.

Light Diesel locomotives between Laira Depot and Plymouth station will normally be routed via Laira Junction.

**Method of working loco hauled trains**

Loco hauled trains are normally worked from Mount Gould Junction to Laira Depot by the Depot pilot locomotive with the train engine remaining attached or following.

**Mount Gould Junction**

Two HSTs, 80x, GWR Short Form HST (HSTGW4), DMU formations or Class 220/1 units may be timetabled to be held in the section between Lipson Jn and Mount Gould Junction awaiting entry to the flushing apron.

**Mount Gould Carriage Wash**

## GW700 GLOUCESTER BARNWOOD JUNCTION TO SEVERN TUNNEL JUNCTION

### Horton Road Junction

**Junction Margin:- 2 minutes** (can be reduced to **1½ minutes** if second train has at least 1-minute pathing or adjustment time approaching Horton Road Junction.)

#### Adjustment to Sectional Running Times (show approaching this location)

Movement (Down)	Reason	Timing Load	Value
Trains routed beyond Horton Road Jn into Gloucester platform 1, if platform 2 is occupied	Approach Control	All Passenger trains	{1/2}
Trains routed beyond Horton Road Jn into Gloucester platform 2, via a weave over UML to pass a train in P1	Approach control and slow speed connection	All Passenger trains	{1/2}
Trains routed beyond Horton Rd Jn towards Awre via the UML or URL at Gloucester	Approach control and slow speed connection	Freight All Passenger trains	{2} {1/2}
Trains routed beyond Horton Rd Jn into Gloucester platform 4	Approach control and slow speed connection	All Passenger trains	{1/2}
Trains routed beyond Horton Road Jn directly into Gloucester C.H.S	Approach control and slow speed connection	All ECS moves	{1/2}

### Gloucester

#### Adjustment to Sectional Running Times (to be shown approaching this location)

Movement	Reason	Timing Load	Value
Horton Road Jcn to Gloucester platform 2 Via platform 1	Longer route combined with precision stop requirement for longer formations	80x / XC HST only	{1/2}

<b>Gloucester</b>			
Horton Road Jcn to Gloucester platform 2 Via UML	Approach control at G154 signal and precision stop requirement for longer formations	80x / XC HST only  All other traffic	{1}  {½}
Horton Road Jcn to Gloucester Platform 4	Slow speed connections	80x / XC HST only  All other traffic	{1}  {½}
<b>Adjustment to Sectional Running Times (to be shown after this location)</b>			
<b>Movement</b>	<b>Reason</b>	<b>Timing Load</b>	<b>Value</b>
Gloucester platform 2 to Horton Rd Jn via platform 1	Approach control at G135	All traffic	{½}
Gloucester platform 4 or URL to Horton Rd Jn	Slow speed connections	80x / XC HST only  All other traffic	{1}  {½}
<b>Connectional Allowance</b>	7

<b>Platform End Conflict Margin</b>						
<b>First Movement</b>			<b>Second Movement</b>			<b>Margin</b>
An arrival into Platform 1 from Horton Road Jn			A departure from Platform 2 to Horton Road Jn via the Up Main			2 mins
An arrival into Platform 1 from Horton Road Jn			A departure from Platform 3			Simultaneous
An arrival into Platform 2 from Horton Road Jn			A departure from Platform 3			2 minutes
An arrival into Platform 2 from Horton Road Jn			An arrival into Platform 3			3 minutes
A departure from Platform 3			An arrival into Platform 2 via the UML from Horton Road Jn (preferred route in this scenario)			Simultaneous
A departure from Platform 3			An arrival into Platform 2 via Platform 1 (not preferred due to signalling time-out)			Second train passes Horton Rd jn 2 minutes after first train departs Gloucester Platform 3.
An arrival into Platform 2 from Horton Road Jn			An arrival into Platform 1 from Horton Road Jn			Second train passes Horton Rd Jn 1 minute after the first train arrives platform 2, refer also to the adjustment allowances table
An Up arrival into Platform 2 from Gloucester West / Awre			An arrival into Platform 1 from Horton Road Jn			4 minutes
An arrival into Platform 2 from Barnwood Jn via the UML			A departure from Platform 1 towards Gloucester Yard Jn			Simultaneous
An arrival into Platform 2 from Gloucester Yard Jn via the UML			A departure from Platform 1 towards Horton Road Jn			Apply a 2 minute junction margin at Horton Rd Jn

<b>Gloucester</b>		
An arrival into Platform 2 from Horton Road Jn via the UML	A departure from Platform 4 or the Up Relief Line towards Horton Road Jn	1 minute
An arrival into Platform 3	A departure from Platform 2 towards Awre	2 minutes
An arrival into Platform 4	A departure from Platform 2 via the UML to Horton Road Jn	1 minute
An arrival into any through platform	An opposite direction arrival into the same platform for attachment purposes	4 minutes
<b>Planning notes</b>		
It is <u>not</u> permitted to show pathing time approaching Gloucester Platform 2 in a down passenger train that is routed via Platform 1. Any pathing time should be applied approaching Horton Rd Jn.		
For a down train approaching Gloucester Platform 2 via UML, a maximum of 1 minute of pathing time is permitted between Horton Rd Jn and Gloucester (in addition to the adjustment value for approach control). Any excess pathing time should be applied approaching Horton Rd Jn.		
<b>Platform Workings for Class 80x</b>		
Platform 1	Can accommodate 5-car 800/802 only	
Platform 2	Can accommodate 5 or 9 car 800/802	
Platform 4	Can accommodate 5, 9 or 10 car 800/802

<b>GW730 SHREWSBURY SUTTON BRIDGE JUNCTION TO NEWPORT MAINDEE WEST JUNCTION (NORTH AND WEST LINE)</b>			
<b>English Bridge Junction</b>			
<b>Adjustments to Sectional Running Times (allowance to be shown approaching this location)</b>			
Movement	Reason	Timing Load	Value
Trains towards Abbey Foregate Jn	Approach control	All	{1}
If a train of over 38SLUs is stopped at Abbey Foregate Jn in the Wellington direction, then a 3 minute margin must apply from the train departs Abbey Foregate to the next train passing English Bridge Jn. This is to mitigate against the length of train fouling the junction.			
<b>Junction Margin</b>			
A margin of 3 minutes is required between a train using the Up main from Shrewsbury P3 to the next train from Sutton Bridge Jn			

<b>Sutton Bridge Junction</b>			
<b>Adjustments to Sectional Running Times (allowance to be shown approaching this location)</b>			
Movement	Reason	Timing Load	Value
From Shrewsbury to Cambrian Line	Slow speed crossover	DMU	{½}
<b>Junction Margin</b>			
When Dorrington Signal box is switched-out, creating a block section from Marsh Brook L.C. to Sutton Bridge Jn, Shrewsbury bound trains may be planned following junction fouling moves at Sutton Bridge Jn on the normal headway from Dorrington <u>plus</u> 2 minutes. This permits running under clear signals.			

<b>Church Stretton</b>	
<b>Dwell Time</b>	
142 to 175	1

<b>Marsh Brook L.C.</b>			
<b>Adjustments to Sectional Running Times (allowance to be shown approaching this location)</b>			
<b>Movement</b>	<b>Reason</b>	<b>Timing Load</b>	<b>Value</b>

<b>Leominster</b>			
<b>Dwell Time</b>			
142 to 175	1		

<b>Moreton – on – Lugg</b>			
Moreton – on – Lugg Stone terminal consists of a loading road and run-round loop therefore it can only accommodate one train at a time. Trains from the Craven Arms direction are able to propel into the Stone Terminal at Moreton-on-Lugg if ground staff are provided by the operator. If not, the train is required to run round at Hereford.			
Trains departing Moreton-on-Lugg Stone terminal northbound propel onto the down main at Moreton on Lugg.			

<b>Shelwick Junction</b>			
<b>Adjustments to Sectional Running Times (allowance to be shown approaching this location)</b>			
<b>Movement</b>	<b>Reason</b>	<b>Timing Load</b>	<b>Value</b>

<b>Cardiff West</b>
<b>Unit coupling and Reversals at Cardiff West</b>
Units that require to be coupled at Cardiff West must only do so in the Brickyard sidings.
A train consisting of more than one unit that is <u>not</u> gangwayed throughout and requires the driver to change ends is only able to do this at the following locations: Brickyard sidings Line A (Signal CF2342) Line E (Signal CF7048)
<b>This does not apply when two drivers are provided (by TOC agreement only)</b>

22X	2
<p>\$ It is possible for a Down train requiring a token for the route towards Tenby to arrive in Whitland if there is no conflicting route from the branch. The Down train should arrive no less than 4 minutes before the Up train is due. The Down train will then have to wait for the driver of the Up train to hand in the token and for the signaller to deliver the token to the Down train. The minimum dwell time is the time difference between the arrival of the Down train and the departure from Whitland of the Up train plus 5 minutes for the token delivery.</p>	
<b>Junction Margin.</b>	
<p>If the route is set for an Up train from Tenby, it will not be possible for the signaller to set a route for any Down train to arrive at Whitland until the Up train has completed its station duties and handed in the token at the signalbox. The margin required between the arrival of an Up train from the branch and a Down arrival is 5 minutes.</p>	
<b>Token exchange.</b>	
<p>Trains to/from GW950 Whitland to Pembroke Dock have to either collect or set down a token for the single line section between Whitland and Tenby. They do this at Whitland SB, which is approximately 120 yards to the east of Whitland station. The SRTs include an allowance for this between Carmarthen and Whitland and vv.</p>

**Shotton High Level****Dwell Time**

Slam	1/2
Power	1/2

**Dee Marsh Junction****Other Restrictions**

Loco hauled trains of all types must not be timed to pass each other between Penyffordd \* and Dee Marsh Jn. owing to weight restriction at Hawarden Bridge.

\* Applies between Wrexham General and Dee Marsh Jn. when Penyffordd SB is switched out.

## 5.4 Platform Lengths

The table below shows the maximum length of train that may use each of the platforms at the following passenger stations. All lengths are in metres. The quoted lengths are the usable lengths from ramp to ramp unless specified. The measurements take no account of the need for signal sighting. Trains longer than the quoted lengths will only be accepted subject to the authority of the Route Director, Except where SDO or ASDO is in normal use.

STATION	PLATFORM	USABLE LENGTH	NOTES
		In metres	
<b>Bristol TM</b>			
Platforms 3 to 12 inclusive are islands combining two platforms on each face, with the odd numbers London end and even numbers at the Penzance end Mid Platform Signals indicate the limits of each platform.			
<b>Permissive Working</b>			
Permissive working (PP) is allowed on through platform lines 3/-/12 for the purpose of attaching, detaching and platform sharing.			
Classes of train 1, 2, 3 ECS, 5, 9 and 0 are allowed, together with any class of train formed only of MPV vehicles when operating as a railhead treatment or inspection train.			
When a train (the second train) arrives which is due to attach to the rear of another train in a far platform, there <b>must</b> be enough room for the whole of the second train in the <b>near</b> platform.			
The platform lengths shown below in the third column, are the measured lengths of the platforms, and DO NOT account for the positions of car stop markers, or stand back distances (assume 10m)

## 5.4.1 Loop Lengths

The table below shows the maximum length of train that may use each of the loops at the following stations. All lengths are in SLUs (Standard Length Unit); an SLU measures 21 Feet, and metres. All lengths are exclusive of an allowance of one locomotive. Check Sectional Appendix for locations where standage is not quoted. Bids for trains longer than the quoted lengths will only be accepted subject to the authority of the Route Director. See also Section 4.5.

## 5.5 Timing Allowances

All allowances shown are in minutes.

SX Daytime allowances apply at all times except where specified differently in Sections 5.5.2, 5.5.3, 5.5.4, 5.5.5 and 5.5.6

All allowances are indicative for the Final Principle Rules and are subject to change.

E refers to engineering allowance

P refers to performance allowances

### 5.5.1 SX Daytime (See routes for applicable times)

On Monday different allowances apply on some routes until the end of the 'Sunday' allowances at the times specified in the tables below. Please refer to Section 5.5.4 for the 'Sunday' allowances section to identify the routes to which those allowances apply.

<b>GW103 PADDINGTON TO UFFINGTON</b>					
Timing Section	Type	ML	RL		Remarks
<b>Down – Daily</b>					
Approaching Slough	ES	1	1		Additional allowance applies to all trains timed to operate during the Two Track weeknight timetable
Approaching Maidenhead	E		1		Applies to class 165/166/387/319/769 terminating at Maidenhead or Bourne End
Approaching Twyford	E		1		Applies to class 165/166/387/319/769 terminating at Twyford or Henley on Thames
Approaching Kennet Bridge Jn	E	1	1		
	ES	1	1		Additional allowance applies to all trains timed to operate during the Two Track weeknight timetable
Approaching Didcot East Jn	E		1		Allowance does not apply to class 165/166/387/319/769 operated services unless they terminate at Didcot Parkway
Approaching Didcot Parkway	E	1			Allowance does not apply to class 165/166/387/319/769 operated services unless they terminate at Didcot Parkway
	ES	1	1		Additional allowance applies to all trains timed to operate during the Two Track weeknight timetable
<b>Up – Daily</b>					
Approaching Didcot	E	1			Allowance does not apply to Class 165/166/387/319/769 operated services
Approaching Reading West or Reading High Level Jn	E	1	1		Does not apply to class 165/166/387/319/769 operated services routed via the Main Lines from Didcot East
Approaching Acton West Junction	E	1	1		Trains routed via Acton Wells or Acton Yard only
Approaching Ladbroke Grove	E	1	1

<b>GW174 WEST EALING TO GREENFORD WEST JUNCTION</b>					
Timing Section	Type				Remarks
<b>Down – Daily</b>					
Approaching Greenford	E	1			Allowance only applies to Class 165, 166 and 769 units

<b>GW180 HEATHROW AIRPORT JUNCTION TO HEATHROW TERMINALS 4 &amp; 5</b>					
Timing Section	Type				Remarks
<b>Down – Daily</b>					
Approaching Heathrow Tunnel Junction	E	1			

<b>GW200 DIDCOT TO HEYFORD (EXCL.)</b>					
Timing Section	Type	ML			Remarks
<b>Down – Daily</b>					
Approaching Oxford	E	1			
<b>Up – Daily</b>					
Approaching Didcot North Junction	E	1			

<b>GW310 WOLVERCOTE JUNCTION TO NORTON JUNCTION</b>					
Timing Section	Type				Remarks
<b>Down – Daily</b>					
Approaching Worcestershire Parkway	E	1*			* Does not apply to services formed with 165, 166 units To be positioned at Norton Jn for trains that do not call at Worcestershire Parkway
<b>Up – Daily</b>					
Approaching Wolvercote Junction	E	1			Allowance does not apply to Class 165/166 operated services

<b>GW340 WORCESTER SHRUB HILL TO SHELWICK JUNCTION</b>					
Timing Section	Type				Remarks
<b>Down – Daily</b>					
Approaching Ledbury	E	1			
Approaching Shelwick Junction	E	1			* Does not apply to services formed with 165, 166 and 769 units
<b>Up – Daily</b>					
Approaching Worcester Foregate St	E	1*			* Does not apply to services formed with 165, 166 and 769 units

<b>GW370 DROITWICH SPA TO CUTNALL GREEN</b>					
Timing Section	Type				Remarks
<b>Up – Daily</b>					
Approaching Droitwich Spa	E	1*			Also shown MD 430 Droitwich Spa to Stourbridge North Junction.  * to be shown approaching Droitwich Spa Goods Loop for trains booked to use the loop.

<b>GW401 ASHCHURCH (INCL.) TO WESTERLEIGH JUNCTION</b>					
Timing Section	Type				Remarks
<b>Down – Daily</b>					
Approaching Cheltenham Spa	E	1			
<b>Up – Daily</b>					
Approaching Gloucester Yard Junction	E	1*			

<b>GW450 STOKE GIFFORD JUNCTION TO BRISTOL EAST JUNCTION</b>					
Timing Section	Type				Remarks
<b>Down – Daily</b>					
Approaching Dr Day's Jn	E	1			Allowance to be shown approaching Lawrence Hill for services that call there

<b>GW480 SWINDON TO STANDISH JUNCTION</b>					
Timing Section	Type				Remarks
<b>Down – Daily</b>					
Approaching Standish Jn	E	1			
<b>Up – Daily</b>					
Approaching Rodbourne Jn	E	1			

<b>GW500 READING TO COGLOAD JUNCTION VIA WESTBURY AND FROME AVOIDING LINES (BERKS. AND HANTS LINE)</b>					
Timing Section	Type				Remarks
<b>Down – Daily</b>					
Approaching Newbury	E	1			Terminating 165/166/387/319/769s only
Approaching Bedwyn	E	1			Terminating trains only
Approaching Heywood Road Junction	E	1			
Approaching Cogload Junction	E	1			

**GW500 READING TO COGLOAD JUNCTION VIA WESTBURY AND FROME  
AVOIDING LINES (BERKS. AND HANTS LINE)**

Approaching Reading	E	1 minute ML or RL but does not apply to passenger services routed from Reading New Jcn.	1 minute ML or RL but does not apply to passenger services routed from Reading New Jcn.

### 5.5.6 Sunday Night time (See routes for applicable times)

SX daytime allowances apply to those routes excluded from this section.

## 5.6 Watering of Steam Locomotives

The following sites only are authorised. The constraints shown must be strictly adhered to and in cases the Train Operator should produce a Method Statement describing their safety control measures, etc. and should issue suitable internal operating instructions:

Location	Constraints
Holyhead Platform 1	
Llandudno Junction Platforms 1 and 4	

It should be noted that 'Goods Line Authority' may be required for some of the locations listed above. See Section 5.1.4 above for Passenger Trains over Goods Lines

On Network Rail controlled infrastructure, work (i.e. the watering activity) may only take place under the control of a COSS.

Additional sites may be considered by the Route's Safety Review Group subject to the provision of suitable supporting documentation.

## 6 Timetabling Considerations

### 6.1 Advertised and Working Times

It is not permissible for trains to be specified to be advertised to arrive before or depart after the booked times stated in the working timetable (WTT).

It is permissible for trains to be specified to be advertised to depart before the booked times stated in the working timetable in the following circumstances;

- (i) Where the WTT departure time is delayed to achieve the required headway behind a preceding train or margin following a conflicting move.
- (ii) As an aid to punctual departure where this practice has been agreed between the Train Operator and Network Rail.

By agreement between the Train Operator and Network Rail, trains may be specified to be advertised to arrive after the booked times stated in the WTT. This agreement is used instead of engineering/performance allowances.

### 6.2 Timing of Light Locomotives

It is a general principle that all light locomotive movements will be timed.

### 6.3 Two-Track Timetable Railway

For the section of line between Ladbrooke Grove and Foxhall Jn the timetable can be planned such that it operates over two lines only. The times for this are shown in the Engineering Access Statement.

Additional Timing Loads for “Two - Track timetable” London Paddington to Reading.

HST(2T)  
DMU(T2T)  
D245-2T  
EMU(2T)  
180(2T)  
220(2T)  
221(2T)

These contain Relief Line Sectional Running Times (SRTs), which can be line-coded ML or RL, without corrupting the existing differential four-track SRTs and should be used for all trains, which run during the weeknight and weekend engineering periods defined in Engineering Access Statement. These trains should be pathed for 2-track operation.

#### **West Ealing Mandatory Timing Point during “2T” operation**

Note that timing of Up Trains at West Ealing is mandatory under two-track operation.
